

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. STATE AGRICULTURAL SOCIETY.

AN ACT

PROVIDE FOR THE MANAGEMENT AND CONTROL OF THE STATE AGRICULTURAL SOCIETY BY THE STATE.

[Approved April 15, 1880.]

People of the State of California, represented in Senate and Assembly, do enact as follows :

SECTION 1. The State Agricultural Society is hereby declared to be a State institution.

SEC. 2. Within ten days after the passage of this Act, the Governor shall appoint twelve ident citizens of the State, who shall, when organized, constitute a State Board of Agriculture, who shall, except as hereinafter provided, hold office for the term of four years, and until their successors are appointed and qualified. Vacancies occurring from any cause in the Board shall be filled by appointment of the Governor for the unexpired term of the office vacated.

SEC. 3. Within ten days after their appointment, the person so appointed shall qualify, as required by the Constitution, and shall meet at the office of the State Agricultural Society, and organize by the election of one of their number as President of the Board and said Society, who shall hold said office of President for the term of one year, and until his successor is elected and qualified. The Board shall also elect a Secretary and Treasurer, not of their number, who shall hold office at the discretion of the Board.

SEC. 4. At the same meeting, the members of the Board shall, by lot or otherwise, classify themselves into four classes of three members each. The terms of office of the first class shall expire at the end of the first fiscal year; of the second class, of the second year; of the third class, of the third year; of the fourth class, at the end of the full term of four years. The fiscal year shall be from the first of February to the first of February.

SEC. 5. The State Board of Agriculture shall be charged with the exclusive management and control of the State Agricultural Society as a State institution; shall have possession and care of property, and be intrusted with the direction of its entire business and financial affairs. They shall define the duties of the Secretary and Treasurer, fix their bonds and compensation, and shall have power to make all necessary changes in the Constitution and rules of the Society, to adapt the same to the provisions of this Act, and to the management of the Society, its meetings and exhibitions. They shall provide for an annual Fair or exhibition by the Society of all the industries and industrial products of the State, at the City of Sacramento; *provided*, that in no event shall the State be liable for any premium awarded or debt created by said Board of Agriculture.

SEC. 6. The Board shall have power to appoint all necessary Marshals and police to keep order and preserve peace at the annual Fairs of the Society; and the officers so appointed shall be vested with the same authority for the preservation of order and peace, on the grounds and the buildings of the Society, that executive peace officers are vested with by law.

SEC. 7. Said Board shall use all suitable means to collect and disseminate all kinds of information calculated to educate and benefit the industrial classes, develop the resources, and advance the material interests of the State, and shall, on or before the first day of February of each year, report to the Governor a full and detailed account of their transactions, statistics, and information gained, and also a full financial statement of all funds received and disbursed. They shall also make such suggestions and recommendations as experience and good policy may dictate for the improvement and advancement of the agricultural and kindred industries.

SEC. 8. The Superintendent of State Printing shall, each year, print and bind in cloth four thousand volumes of said transactions, and deliver the same to said Board of Agriculture for distribution and exchange. He shall also do such job printing as said Board may require to carry out the provisions of this Act.

SEC. 9. The Directors or Board of Managers of each county and district agricultural society association, and of county, district, or State horticultural and stock breeding association or society, organized and acting under the laws of this State, shall report annually, on or before the first day of April, to the State Board of Agriculture, the name and Post Office address of the officer of such society or association; and, on or before the first day of December, shall report to the Board of Agriculture the transactions of said society, including the premiums awarded, the list of stock and articles exhibited, and the premiums paid; the amount of receipts and

expenditures for the year, the new industries inaugurated, and any and all facts and statistics showing the development and extent of the industries, products, and resources of the county or district embraced within the management of such society or association; *provided*, that the provisions of this Act shall not apply to any Board of Commissioners or other body organized under the laws of this State, the object of which is to promote vinicultural industries, unless such Board or body shall voluntarily request the privilege of making such reports as are called for by this Act, in which case this Board or body shall enjoy equal privileges as are accorded to other institutions devoted to agriculture.

SEC. 10. To facilitate such reports, the State Board of Agriculture shall have prepared, and shall furnish such societies with necessary schedules and blanks for such reports; and such State Board shall include such reports from societies and associations, or so much thereof as they may deem advisable, in their report to the Governor.

SEC. 11. When said State Board of Agriculture shall have been organized and classified as provided herein, the Secretary of the Board shall report such organization and classification to the Governor. He shall also report any vacancy that may occur in said Board at any time.

SEC. 12. All laws and parts of laws in conflict with this Act are hereby repealed.

SEC. 13. This Act shall take effect and be in force from and after its passage.

CONSTITUTION

OF THE

CALIFORNIA STATE AGRICULTURAL SOCIETY.

[Revised and adopted by the State Board of Agriculture, May 18, 1880.]

NAME.

SECTION 1. This Society shall be called "The California State Agricultural Society."

OBJECT.

SEC. 2. It shall be the object of this Society to encourage the cultivation of the soil, and the moral development of all the agricultural resources of this State.

SEC. 3. To foster every branch of mechanical and household arts calculated to increase the happiness of home life.

SEC. 4. To extend and facilitate the various branches of mining and mining interests.

MEMBERSHIP.

SEC. 5. *Annual Members.*—Any person who shall pay into the funds of this Society the sum of five dollars, may become a member of the same; such membership to expire at the end of the current fiscal year.

SEC. 6. *Life Members.*—Any person may become a member for life by the payment of fifty dollars; or, if already a member, by the payment of forty-five dollars, or by serving a full term as a member of the State Board of Agriculture, and shall thereafter be exempt from all dues and assessments.

SEC. 7. *Honorary and Corresponding Members.*—Any person whom the Board shall propose may be elected an honorary or corresponding member, and shall enjoy, free of charge, all the privileges of the Society, except voting and holding office.

SEC. 8. *Privileges of Members.*—Any citizen of this State, being a member of this Society, shall be eligible to office, entitled to vote, and enjoy the free use of the library, under the rules of the same, and have free admission, accompanied by his wife and minor children, to all the exhibitions of the Society, and shall be permitted to compete for premiums in any or all departments.

SEC. 9. *Expulsion of Members.*—Any member who shall present for exhibition any article or animal which he is not entitled by the rules of the Society to exhibit, or who shall attempt to receive, or be guilty of a breach of good faith towards the Society, may be expelled by a vote of two thirds of the members present at any meeting of the Board; *provided, always,* that no member shall be expelled unless written notice of the alleged offense shall have been served on him, or left at his usual place of residence at least twenty days previous to the action.

OFFICERS.

SEC. 10. The officers of this Society shall consist of twelve Directors, to be appointed by the Governor, who shall constitute a State Board of Agriculture, seven of whom shall constitute a Board. The Board shall be charged with the exclusive management and control of the State Agricultural Society as a State institution; shall have possession and care of its property, and be entrusted with the direction of its entire business and financial affairs; shall have power to make all necessary changes in the Constitution and rules of the Society; shall provide for an annual Fair or exhibition by the Society of all the industries and industrial products of the State, at the City of Sacramento, and such other exhibition as they may deem important. They shall elect one of their members as President of the Board and Society, and a Treasurer, Secretary, not members of the Board. They may also appoint, annually, as officers of the Board, a chemist, a botanist, a mineralogist, a geologist, a metallurgist, an ornithologist, and an entomologist, and define the duties of each. They may appoint such committees on the

various departments of agriculture, mining, and manufactures, either generally or for specific purposes, as they may deem important for the best interests of the State, and require such committees to report the results of their investigations to the Board at such times as may be named by them.

SEC. 11. Duties of President.—The President shall preside at all meetings of the Board and of the Society; shall have power to call special meetings of the Board when necessary, and at the written request of ten members, may call extra meetings of the Society; shall appoint all meetings not otherwise provided for; and shall sign all financial and official documents emanating from the Society, and not otherwise provided for. In the absence of the President from any meeting of the Board or Society, any Director may be called to the chair, and during such meeting, and for the completion of any business transacted, or ordered at the same, shall have the same powers as the President.

SEC. 12. Duties of Secretary.—The Secretary shall conduct the correspondence of the Board or Society, keeping copies of all important letters written in the name or on behalf of the Board or Society, holding the same free to the inspection of any member of the Board or Society, at any regular meeting of the same. He shall also receive and file all letters addressed to the Board or Society, holding the same subject to the Board of Directors. He shall attend all meetings of the Society and the Board, keeping a full record of the proceedings of each in a book for that purpose. He shall prepare and publish all notices of meetings, shall keep a roll of all standing committees, and call the same (noticing absences) whenever desired to do so by the Chair; shall sign all certificates of honorary and corresponding and life memberships, and forward the same to those entitled to receive them. He shall keep, in a book prepared for that purpose, the name and address of every member; shall prepare and sign all gratuitous or complimentary cards or tickets of admission; shall countersign all diplomas, certificates of merit, etc., awarded by the Board, and forward the same to their respective claimants. He shall be *ex officio* Librarian; shall keep the seal, and all the plates, dies, engravings, etc., belonging to the Society, and shall cause to be struck therefrom such medals and impressions as may, from time to time, be required. He shall have charge of all specimens, models, plants, seeds, books, etc., and arrange, prepare, or distribute the same under the direction of the Board. He shall prepare all reports to be made by the Board to the Society, and to the State. He shall receive all moneys due or payable to the Society, and pay the same to the Treasurer, taking his receipt therefor; shall hold all bonds filed by officers of the Society for the faithful performance of their duty, and all vouchers for every class of expenditure. He shall countersign all drafts ordered by the Board, and all certificates of annual and life membership, and keep an account of the same in a book, as they are issued, and shall, in December of each year, prepare a tabular statement of the receipts and expenditures of the Board according to the law organizing the same.

SEC. 13. Duties of the Treasurer.—The Treasurer shall receipt for all funds at the hands of the Secretary, and shall disburse the same only on the order of the Board, attested by the President and the Secretary. He shall also hold in trust, all certificates of stock, bonds, notes, deeds, or other evidences of debt or possession belonging to the Society, and shall transfer, invest, or dispose of the same only by direction of the Board. He shall file with the Secretary a bond for the faithful performance of his duties; said bond to be approved by the Board, and shall, at the annual meeting, make to the Society a detailed report of all his transactions.

STANDING COMMITTEES.

SEC. 14. Committee of Finance.—The Committee of Finance shall consist of five members of the Board, the President being one, whose duty it shall be to audit the Secretary and Treasurer's accounts, to examine and approve all bills before they are paid, to have general supervision of the finances of the Society, and to report their transactions and financial condition of the Society in full to the Board whenever called on so to do.

SEC. 15. Library Committee.—The Library Committee shall consist of four members of the Board and the Secretary, whose duty it shall be to have the general supervision of the library and cabinet, to make all necessary rules and regulations for the government of the same (said rules and regulations being subject to the approval of the Board), to suggest such means for the safe keeping and enlargement of both the library and cabinet as they may deem expedient, and to make a full report of their transactions, together with the state of the department under their charge, at each annual meeting.

SEC. 16. Visiting Committee.—The Visiting Committee, to be appointed by the Board from their own number, shall visit and examine all farms, orchards, vineyards, nurseries, field crops, irrigation works, agricultural machine works, agricultural machinery in operation, etc., which may be entered for competition, and which require examination at other times and places than the annual Fair; to award premiums for the same according to the schedule, and recommend such gratuities as they may deem proper, and make a full report to the Board at least one day previous to the annual Fair.

SEC. 17. Printing and Publication Committee.—The Committee on Printing and Publication shall consist of five (the President and Secretary being two), whose duty it shall be to contract for and superintend, under the direction of the Board, all printing and publishing necessary for the Society.

OFFICE AND ROOMS.

SEC. 18. The office, rooms, library, and cabinet of the Board and Society shall be permanently located at the Capital of the State.

DISTRICT AGRICULTURAL ASSOCIATIONS.

AN ACT

TO FORM AGRICULTURAL DISTRICTS, TO PROVIDE FOR THE ORGANIZATION OF AGRICULTURAL ASSOCIATIONS THEREIN, AND FOR THE MANAGEMENT AND CONTROL OF THE SAME BY THE STATE.

[Approved April 15, 1880.]

The People of the State of California, represented in Senate and Assembly, do enact as follows:

SECTION 1. The Counties of Alameda, Contra Costa, and San Francisco shall constitute Agricultural District No. 1.

SEC. 2. The Counties of San Joaquin, Calaveras, Fresno, Kern, Merced, Mariposa, Stanislaus, Tulare, and Tuolumne shall constitute Agricultural District No. 2.

SEC. 3. The Counties of Sutter, Yuba, Butte, Colusa, Tehama, Yolo, and Sacramento shall constitute Agricultural District No. 3.

SEC. 4. The Counties of Sonoma, Marin, Solano, Napa, and Lake shall constitute Agricultural District No. 4.

SEC. 5. The Counties of Santa Clara and San Mateo shall constitute Agricultural District No. 5.

SEC. 6. The Counties of Los Angeles, San Diego, San Bernardino, Santa Barbara, Ventura, and Inyo shall constitute Agricultural District No. 6.

SEC. 7. The Counties of Monterey, Santa Cruz, San Luis Obispo, and San Benito shall constitute Agricultural District No. 7.

SEC. 8. The Counties of Nevada, Placer, El Dorado, Amador, Alpine, and Mono shall constitute Agricultural District No. 8.

SEC. 9. The Counties of Mendocino, Humboldt, and Del Norte shall constitute Agricultural District No. 9.

SEC. 10. The Counties of Siskiyou, Trinity, and Shasta shall constitute Agricultural District No. 10.

SEC. 11. The Counties of Plumas, Lassen, Modoc, and Sierra shall constitute Agricultural District No. 11.

SEC. 12. Any fifty or more persons representing a majority of the counties within any one of the districts above constituted, may form an association for the improvement of the material industries within such district, and when so formed the association shall be known and designated by the name of — Agricultural Association, and by such name and style shall have perpetual succession, and shall have power and authority to contract and be contracted with, to sue and be sued, to have and use a common seal, to purchase and hold and lease real estate, with such buildings and improvements as may be erected thereon, and may sell and lease and dispose of the same at pleasure. The said real estate shall be used by such association for the purposes of holding exhibitions of horses, cattle, and other stock, of the agricultural, horticultural, viticultural, mechanical, manufacturing, and domestic products of such district, with view to the improvement of all the industries in the same.

SEC. 13. The officers of such association shall consist of eight Directors, who shall constitute a District Board of Agriculture for District Number —, a President, who shall be one of their number, and a Secretary and Treasurer, not of their number.

SEC. 14. Within ten days after the formation of an agricultural association within any of the districts above constituted, in accordance with the provisions of this Act, and notice of such formation to the Governor, the Governor shall appoint eight resident citizens of such districts as members of a District Board of Agriculture for said district, whose term of office shall be four years, except as hereinafter provided.

SEC. 15. Within ten days after their appointment, the persons so appointed shall qualify, as required by the Constitution, and shall meet at a place within the district, and organize by the election of one of their number as President of the Board and association, who shall hold said office of President one year, and until his successor is elected; they shall also elect a Secretary and Treasurer.

SEC. 16. At the same meeting the members of the Board shall, by lot or otherwise, classify themselves into four classes of two members each. The terms of office of the first class shall expire at the end of the first fiscal year; of the second class, of the second fiscal year; of the

third class, of the third fiscal year; and of the fourth class, at the end of the full term of four years. The fiscal year shall be from December first to December first.

SEC. 17. Each association so formed and organized is hereby declared and shall be recognized a State institution, and the Board so appointed and qualified shall have the exclusive control and management of such institution for and in the name of the State, and shall have the possession and care of all the property of the association, and shall fix the terms of office, and the bonds of the Secretary and Treasurer, and determine their salaries and duties. They shall have power to make all necessary by-laws, rules, and regulations for the government of the association and the management of its prudential and financial affairs. They shall provide for an annual Fair or exhibition by the association of all the industries and industrial products in the district, at such time and place as they deem advisable; *provided*, that no District Fair shall be held in any of the districts at the same time of the State Fair; *and provided further*, that the State shall in no event be liable for any premium offered, or award, or for any debt contracted by any District Board of Agriculture or Agricultural Association.

SEC. 18. When any District Board of Agriculture shall have been classified and organized as herein provided, the Secretary of the Board shall report such classification and organization to the State Board of Agriculture; he shall also report the same to the Governor, and shall report any vacancy that may occur in the Board to the Governor, who shall fill the same by appointment for the unexpired term.

SEC. 19. All laws and parts of laws in conflict with this Act are hereby repealed.

SEC. 20. This Act shall take effect from and after its passage.

AN ACT

TO AMEND SECTIONS THREE, FOUR, NINE, AND ELEVEN, OF AN ACT ENTITLED "AN ACT TO FORM AGRICULTURAL DISTRICTS, TO PROVIDE FOR THE ORGANIZATION OF AGRICULTURAL ASSOCIATIONS THEREIN, AND FOR THE MANAGEMENT AND CONTROL OF THE SAME BY THE STATE," APPROVED APRIL 15, 1880, SO AS TO CREATE TWO ADDITIONAL DISTRICTS.

[Approved March 6, 1883.]

The People of the State of California, represented in Senate and Assembly, do enact as follows:

SECTION 1. Section three of the Act of which this is amendatory, entitled an Act to form agricultural districts, to provide for the organization of agricultural associations therein, and for the management and control of the same by the State, approved April fifteenth, eighteen hundred and eighty, is amended to read as follows:

Section 3. The Counties of Butte, Colusa, and Tehama, shall constitute Agricultural District Number Three.

SEC. 2. Section four of said Act is amended to read as follows:

Section 4. The Counties of Sonoma, Marin, Solano, and Napa, shall constitute Agricultural District Number Four.

SEC. 3. Section nine of said Act is amended to read as follows:

Section 9. The Counties of Humboldt and Del Norte shall constitute Agricultural District Number Nine.

SEC. 4. Section eleven of said Act is amended so as to read as follows:

Section 11. The Counties of Plumas, Lassen, Modoc, and Sierra, shall constitute Agricultural District Number Eleven. The Counties of Mendocino and Lake shall constitute Agricultural District Number Twelve; and the Counties of Sacramento, Yolo, Yuba, and Sutter, shall constitute Agricultural District Number Thirteen.

SEC. 5. This Act shall take effect immediately.

REPORT.

OFFICE STATE BOARD OF AGRICULTURE,
SACRAMENTO, February 1, 1884. }

His Excellency GEORGE STONEMAN, *Governor of California*:

SIR: In presenting to you our report for the fiscal year just ended, we feel considerable pride and no little satisfaction at the prosperous condition of the Society. The past year has been one of unusual prosperity for us. A detailed statement of the transactions of this Board for the past year, together with some instructive agricultural papers, and a few recommendations with a view to rendering the Society more efficient in aiding the development of the State's interests, will be found herewith.

CROP REPORTS.

The Board are, in every way that their means will afford, attempting to promulgate the plan of ascertaining the exact productions of each county, whereby a comprehensive statement can be given each year of all farm products. From experience had, we are more and more impressed with the idea that you should recommend in your next message to the Legislature, the establishment of a system of correspondents in each county for the purpose of ascertaining accurately the acreage and yield of cereals grown in this State. We would recommend the establishment of a Bureau of Agricultural Statistics in connection with the State Board of Agriculture. While the Board and its officers are doing all in their power to further the interests of agriculture, they find that it entails an expense which cannot be met by their present source of revenue. In many of the Eastern States the Legislature, recognizing the vast importance of such a scheme, have made liberal appropriations for this purpose. In selecting correspondents a moderate compensation could be paid, of say \$300 per year to each. While this is not sufficient to remunerate one for his entire time, those can be selected who are willing to attend to it in addition to any other vocation they may have. Take a county official who has more or less business with the farming community; he can obtain the desired information from each township in the county, at stated times, and transmit the same to this Board monthly. We could then issue a small pamphlet containing these reports, which would give the condition, yield, etc., of all cereals, the price obtained, and such other interesting facts that may be given pertaining to the subject. The information thus obtained would be invaluable to the grower; coming from such a source, it would be most reliable. The conflicting reports now scattered throughout the State, put the farmer at sea. Many of these reports are from speculative sources, as in the past year has been fully demonstrated.

During the early part of the year estimates of the probable yield of wheat in this State were asked for by numerous eastern correspondents. In response thereto the Secretary of this Board, after correspondence with practical farmers of each county, placed the approximate yield at thirty million bushels. Much comment was then made upon this estimate. The operators cried it down, and made estimates far in advance of this. A prominent evening journal of San Francisco went so far as to say that the "operators" never placed much confidence in the State Agricultural Society. The reason probably is that this Society obtains and gives the opinions of practical farmers, in whose interests it works, while the "operators" work wholly in the interests of themselves. Were we "operators," and desired to obtain as much grain as possible early in the season, knowing that the crop would not be more than an average one, would it not be advisable for us to circulate reports that a greater abundance of grain would be grown that year, and enlist influential newspapers in our way of thinking, and encourage the farmer to dispose of his products immediately after harvest, while we would be purchasing the very grain we had urged him to sell; after which it would be found that we were mistaken(?); that wheat had advanced ten or twenty per cent. Would not the mistake be beneficial to the "operators"? Whereas, had the grower the correct information at all times, they could be their own judges as to the supply and demand. The object of "operators" is to make the producer believe the supply will exceed the demand, while the facts may be entirely opposite. The State Board of Agriculture is desirous of doing all in their power to protect and assist the agriculturist. If the grower obtains reliable information, respecting the state of all crops, he can then protect himself, and take advantage of the market in the disposition of his products, and not be placed at the mercy of those who desire to either "bull" or "bear" the market.

You will find herewith, in tabulated form, such statistics that have been collected from reliable sources by the system above referred to, and it will be seen that instead of the wheat yield exceeding fifty million bushels we had but thirty-two million six hundred and fifty-nine thousand eight hundred and seventy bushels. Had the "operators" more confidence in the reports of this Society an over-abundance of shipping would not have been engaged, and the large commercial failure of a prominent grain-buying firm possibly been prevented.

THE FAIR OF 1883.

The annual Fair, given under the auspices of this Board in September last, was a success in every particular, giving entire satisfaction to exhibitors, visitors, and the management. The exhibits are increasing each year, and the interest taken by all engaged indicates the necessity of this feature. The live stock exhibition of this year was more varied than at any preceding Fair. The interest taken in the breeding and raising of improved live stock is steadily increasing in this State, making the demand for fine stock more than equal to the supply, thereby causing an increase of importations each year. We contend that the Speed Programme is an essential auxiliary to our exhibition. It not only aids in developing the speed and endurance of the different strains of blood, but is a source of revenue without which our premiums for other classes would be materially reduced.

The amount of premiums offered by the Society exceed \$20,000. The amount drawn by exhibitors in 1883, amounted to nearly one half of that sum. The amount appropriated by the State being but \$7,500, we are compelled to have attractions that will return us sufficient revenue to make the premium list varied and complete.

Our financial statement of race account will show the following:

<i>Dr.</i>		
Added money and purses.....		\$14,005 00
<i>Cr.</i>		
Receipts from entries.....	\$9,165 00	
Receipts from privileges.....	4,355 02	
		<hr/> 13,520 02
Balance.....		<hr/> \$484 98

Thus it will be seen that the net amount we are out in this department is less than \$500, while the gate receipts are, for the Park alone, \$13,256 50 for the week. The income derived from this is used in the payment of premiums, expenses, and improvements.

This plain statement is made for the purpose of thoroughly enlightening those who are prone to condemn this portion of the exhibition. We hold that the breeder should receive the same consideration, at our hands, as the producer. We do not desire to discriminate in favor of either, but as the receipts show, the breeder has assisted us in procuring funds to distribute among the producers.

The Pavilion display was fully up to the standard. As we were compelled to once more use the old building, we had some apprehension of the result financially, but the result shows the receipts to be up to the average. Many applications that were made with the understanding that we were to occupy the new building, were withdrawn on account of the inability to obtain the space necessary. The completion of The State Agricultural and Industrial Exposition Building now enables us to state that we are in a condition to accommodate all who may apply.

It is the intention of the Board, with the always willing spirit of the people of the State, to make the Fair of 1884 eclipse any heretofore given—the Board having concluded to extend the time to two weeks, thereby encouraging the exhibition of industrial products, as many have heretofore refrained from making an expensive exhibit owing to the shortness of time the articles were on exhibition.

As the result, a new and much larger list of premiums will be offered. The issuance of a new list will now be necessary, augmented by the addition of liberal awards, embracing the products of every industry of the State. By means of correspondence, and thorough distribution of our premium lists, we desire to reach all who may be engaged in the production of both agricultural and industrial products.

The intense interest manifested by the exhibition of the various cereal productions made by Sonoma County through the Sonoma County Pomona Grange, has encouraged the Board to give for the most extensive, perfect, and varied exhibition of farm products (exclusive of live stock) exhibited by counties, the sum of six hundred dollars, divided into four premiums, of three hundred dollars to the best, one hundred and fifty dollars to the second best, one hundred dollars to the third best, and fifty dollars to the fourth best; it being understood, that if agreeable to the exhibitor, the premium lots will be forwarded to the World's Fair at New Orleans. In this connec-

tion, we ask the hearty coöperation of the subordinate Granges, to aid us in making a display that will fully show the productive qualities of our grand State. The copious rains that are now falling encourages us to believe, that while we may not have an over-abundant yield, the prospect is good, and with the usual Spring rains a fair yield may be expected.

From an agricultural standpoint, the past year has not been up to the standard; the yield of all farm products fell considerably below the average. From the latter part of February up to March twenty-sixth, we had an unusually dry spell, no rain falling within that time, when it is most needed. The rain that came in May did the late sown grain some good; the early grain was not benefited to any great extent. The north winds of June very materially affected the cereal, as well as the grape crop. In the former instance, the grain being in the "milk" at that period, was shriveled by the hot winds to such an extent as to reduce the yield. In the latter case, the vineyards of the Sacramento and San Joaquin Valleys were injured in the way of blighting the berry, the raisin grapes being shriveled, while the wine grape suffered from insufficient nutrition. These industries being lamed to a certain extent, our exports were reduced somewhat.

The cultivation of the raisin grape is fast becoming an important feature, and the manufacture of raisins promises to be one of California's most prominent industries, as the raisins now made in this State attract the attention of the world, and are acknowledged to be up, in quality and flavor, to any imported. In fact, the grape interest is fast assuming gigantic dimensions, and in a short time will exceed other industries in the way of exports.

We are more than satisfied with the financial showing made during the past year, and believe, with judicious management, we will be able to entirely wipe out the indebtedness we have been compelled to incur in making the following

PERMANENT IMPROVEMENTS.

In addition to the new Pavilion, a description of which is herewith attached, the Board have made a most marked improvement at the Park, in the way of constructing a new track, new stabling, etc. Immediately after the close of the Fair of 1883, which from attendance and management proved to be the most successful held by this Society since its organization, the Board deemed it highly necessary that important improvements should be made at the Park, and to that end secured the services of Mr. J. C. Pierson, one of the most competent civil engineers in the State, for the purpose of making the surveys necessary with a view of constructing a regulation track. Mr. Pierson, after examination, reported that such a plan could be carried out by purchasing the grounds immediately northeast of the old grounds. This was ordered done, and the plans directed to be drawn. Shortly after Mr. Pierson submitted a set of plans whereby the track was thrown easterly sufficient to enable the construction of a quarter-stretch, twenty-five feet wide, immediately in front of and continuing the full length of the Grand Stand. The cattle sheds that extended from a point nearly due east from the main entrance, north and westerly, forming an L, are to be removed and rebuilt around the first turn of the new track, forming a half-circle, to be built sufficiently strong

to permit the locating of three or four rows of open seats on the top; this row of stalls to be nine hundred feet in length. The sheep and hog pens, with chicken coops, to be removed directly south of first turn, the change in the track giving a much larger space in the south end of the grounds. The amphitheater now located in the eastern portion of the grounds to be removed to the southwest corner of the grounds, leaving the same nearly adjacent to the stands, whereby it will be made available for the exhibition of premium stock. The building known as Machinery Hall to be removed to the southern portion of the grounds and converted into cottage stables. The track as contemplated, makes the turns one quarter of a mile, and the stretches one quarter of a mile in length, commonly called a "regulation" track; the turns to be "thrown up" or graded on a 2.20 gait basis.

The estimate given by Mr. Pierson for these improvements, exclusive of the land purchased and building of cottage stables, was to be within \$8,000. The work was ordered to be done.

At a subsequent examination, it was found necessary to level up and brace the building known as the Grand Stand, at an estimated cost of \$2,400. Mr. Pierson was directed to place the posts supporting this stand on concrete piers, and to tie the building with one-inch rods and joint bolts.

Should the expense not exceed the estimates given, you will readily see that the Board shall have expended in Park improvements the sum of fourteen thousand one hundred (\$14,100) dollars. With an additional \$5,284 87, expended on the new Pavilion, makes a total of \$19,384 87 to be expended in making permanent improvements to the property of the Society. In this connection the Society has been greatly aided by the County of Sacramento, through its Board of Supervisors, who have manifested the most enlightened generosity by the donation of the entire proceeds of the sale of the old Pavilion property, which netted the Society the sum of fourteen thousand seven hundred and seventy-five (\$14,775) dollars. Ten thousand of which enabled us to liquidate the indebtedness incurred in making the \$40,000 subscription towards building the new Pavilion. To the citizens of Sacramento, who by their initiatory and prompt liberality a tax was raised and collected upon their property sufficient to equal the thirty thousand (\$30,000) dollars promised by the Board of Trade, and to Mayor J. Q. Brown, and his colleagues, Messrs. Neilsen and Gutenberger, we are likewise grateful for the prompt and willing assistance given in making the necessary tax levy.

As will be seen by examination, the Board have caused to be expended, during the past year, fully one hundred thousand (\$100,000) dollars in making permanent improvements.

PURCHASE OF REAL ESTATE.

In making the present permanent improvements to the Park grounds it became necessary to purchase the following described land, as the old grounds would not permit us to build a "regulation" track: The south half of Lot Number One, and Lots Number Two and Number Seven, in the block bounded by C and D and Twenty-second and Twenty-third Streets, for which we paid Jacob Alsen thirteen hundred (\$1,300) dollars and the manure privilege for five years; also, Lots Number Seven and Number Eight in the block

bounded by B and C and Twenty-second and Twenty-third Streets, from Peter Spencer and wife, for the sum of five hundred (\$500) dollars; also, Lots Numbered One, Two, and Eight, in the block bounded by D and E and Twenty-Second and Twenty-third Streets, from F. L. George, for the sum of one thousand one hundred and fifty (\$1,150) dollars; also, the north half of Lot Number One, in the block bounded by C and D and Twenty-second and Twenty-third Streets, from Simon Ash, for the sum of two hundred and fifty (\$250) dollars; also, Lot Number Eight, in the block bounded by C and D and Twenty-second and Twenty-third Streets, from H. S. Beals, for the sum of two hundred and fifty (\$250) dollars; also, Lot Number Seven, in the block bounded by D and E and Twenty-second and Twenty-third Streets, from F. L. George, for the sum of three hundred and fifty (\$350) dollars. The total amount being \$3,700.

HISTORY OF THE EXPOSITION BUILDING.

The State Agricultural Society have for several years past been agitating the question of a new exposition building. The Society, being under supervision of the State, the Board of Directors deemed it proper to advise the construction of a State Agricultural and Industrial Exposition Building upon the State Capitol grounds. A conference was held with the Sacramento Board of Trade, and it was agreed that the City of Sacramento should be asked to subscribe the sum of \$30,000, and the county the proceeds of sale of the old Pavilion, to aid in the erection of this grand structure, provided the State could be induced to appropriate a like amount. At the convening of the Legislature, the Sacramento delegation, consisting of Senators Cox and Routier, and Representatives LaRue, Doty, and Ryan, agreed to the introduction of the following bill by Representative Doty, and known as Bill No. 153; introduced January 13, 1883:

AN ACT TO AUTHORIZE THE ERECTION OF A STATE AGRICULTURAL AND INDUSTRIAL EXHIBITION BUILDING ON THE STATE CAPITOL GROUNDS, AND TO APPROPRIATE MONEY THEREFOR.

The People of the State of California, represented in Senate and Assembly, do enact as follows:

SECTION 1. The State Capitol Commissioners shall, within ninety days after the passage of this Act, select and set aside not less than four hundred feet square of land in the State Capitol grounds, easterly from the State Capitol, for the purpose of erecting thereon a building to be known and used as hereafter provided.

SEC. 2. The State Board of Agriculture is hereby authorized to erect on the land set aside as provided for in section one, a building to be known as the State Agricultural and Industrial Exhibition Building, to be used by them for State exhibitions of the industries and industrial products of the State, and for the safe keeping and preservation of agricultural, mechanical, mining, and other specimens, products, and models of the several branches of industry; *provided*, that said building, when completed, shall not cost in its construction exceeding the sum of eighty thousand dollars.

SEC. 3. The general form and plan of said building shall be submitted to and approved by the State Capitol Commissioners and the State Board of Agriculture, and be under their immediate supervision and control. All claims, contracts, or expenses incurred in the erection of said building shall be authenticated by the officers of said Boards before payment can be made thereon or therefor.

SEC. 4. The said building so erected shall be the property of the State, but shall be subject to the State Board of Agriculture for the purposes and uses specified in this Act, and in the "Act to provide for the management and control of the State Agricultural Society by the State," approved April fifteenth, eighteen hundred and eighty, and such further Acts as may be passed by the Legislature controlling the uses for the benefit of industries mentioned in section two of this Act.

SEC. 5. The sum of forty thousand dollars is hereby appropriated out of any moneys in the General Fund not otherwise appropriated, for the purposes mentioned in this Act; *provided*, that no part of said forty thousand dollars hereby appropriated shall be drawn from the State Treasury until an additional sum of forty thousand dollars, to be also used in the erection of

said building, shall have been raised by the City and County of Sacramento, or the people thereof, and paid into the State Treasury, both of said sums to be used for the same purpose.

SEC. 6. This Act shall take effect immediately.

After considerable delay the bill finally passed both Houses, and was approved by Governor Stoneman March 9, 1883.

At the city election, held in March, 1883, the question of a special tax for new Pavilion purposes, to raise \$30,000, was submitted to a vote of the people of Sacramento, who decided by a vote of three thousand six hundred and fifty-five in favor of, to one hundred and two as against the proposition. A special levy of thirty cents on each \$100 was made, and the \$30,000 collected and paid into the treasury, together with \$10,000 raised by the Directors, making \$40,000, an amount equal to that appropriated by the State. The Board of Directors immediately advertised for plans, offering as a premium the sum of \$300 to the successful plan. On the ninth day of April, 1883, the State Board of Agriculture and the State Capitol Commissioners met in the Executive Department at the Capitol to receive plans, which were submitted by the following named architects: Messrs. F. Hilbert, Wm. Curlett, and A. W. Burrell of San Francisco; Messrs. Wm. Kirk and the Newsom Brothers of Oakland, and W. H. Hamilton, James Seadler, and A. A. Cook of Sacramento. After receiving the explanations of their respective plans, the Board of Directors proceeded to ballot for choice (the Capitol Commissioners claiming the right to act as a separate Board). On the first ballot the vote stood as follows (each Director voting for three plans, and the plans for the building to be selected from the three receiving the highest number of votes):

Mr. Curlett's plan received	9 votes
Mr. Seadler's plan received	10 votes
Mr. Burrell's plan received	10 votes
Mr. Cook's plan received	3 votes
Mr. Hamilton's plan received	1 vote

The plans of Messrs. Burrell, Seadler, and Curlett receiving the highest number of votes, were selected to be voted for. The Directors then proceeded to vote for their first, second, and third choice, all to be submitted to the Board of Capitol Commissioners for their verification. The result was as follows:

FIRST CHOICE.

Mr. Seadler's plan received	7 votes
Mr. Burrell's plan received	3 votes
Mr. Curlett's plan received	1 vote

SECOND CHOICE.

Mr. Burrell's plan received	6 votes
Mr. Curlett's plan received	3 votes
Mr. Seadler's plan received	2 votes

THIRD CHOICE.

Mr. Curlett's plan received	7 votes
Mr. Burrell's plan received	2 votes
Mr. Seadler's plan received	2 votes

Whereupon, Mr. Seadler's plan was declared to be the first choice of the State Board of Agriculture, Mr. Burrell's the second, and Mr. Curlett's the third. The Board of Directors then ordered the three

plans to be submitted to the Capitol Commissioners for their verification, the action of that Board to be final.

At a subsequent meeting, the Capitol Commissioners selected the plan of Mr. A. W. Burrell, of San Francisco—the second choice of the Board of Agriculture. On the twenty-third day of April, the Board of Agriculture advertised for bids for the construction of the building as per plans and specifications, exclusive of the plumbing and gasfitting, as the Board was anxious to have the building commenced, and this part being considered not necessary at this time. On the third day of May the following bids were received for the construction of the building, exclusive of the plumbing and gasfitting:

Carle & Croly, of Sacramento	\$73,953 00
R. McKillican, of Oakland	73,863 00
M. J. Kelly, of San Francisco	74,000 00

The bid of Mr. McKillican being the lowest, it was accepted, subject to the action of the Board of Capitol Commissioners. The Board of Agriculture deemed it necessary, after examination of the grounds, to have the foundation made of piles driven to gravel. Mr. McKillican entered into the contract to so construct at an additional cost of \$500, which was accepted, thereby increasing his bid to \$74,363, the Capitol Commissioners concurring. On the sixteenth day of May, Mr. McKillican signed the contract with the officers of the State Board of Agriculture and State Capitol Commissioners, and filed a bond of \$25,000 for the faithful performance of the work, and the ground was immediately broken.

The following named Directors were appointed to act as the Building Committee for the State Board of Agriculture: Messrs. La Rue, Newton, Coleman, Green, Hancock, Finigan, and Chase. Mr. A. A. Cook, of Sacramento, being appointed Superintendent of Construction.

On the fifth day of June the corner-stone of the new building was laid under the direction of Grand Master Clay W. Taylor of the Grand Lodge of Masons. The casket placed in the stone contained:

1. Reports of the State Board of Agriculture for 1879 and 1881.
2. Report of the Viticultural Commission for 1881.
3. Constitution and By-Laws, and list of officers and members of the State Board of Agriculture, with premium list for 1883.
4. Constitution, By-Laws, and list of officers of the National and State Grange.
5. Assembly Bill No. 153, authorizing the erection of the building, and the Journal of both Houses on the passage of the bill.
6. Sacramento Record-Union, June 5th.
7. Sacramento Daily Bee, June 5th.
8. Breeder and Sportsman, May 26th.
9. California Spirit of the Times, June 2d.
10. Pacific Rural Press, June 2d.
11. Pacific Life, June 2d.
12. Sacramento Business College Journal.
13. Copies of Examiner, Call, Chronicle, Bulletin, Alta, and Post, of June 5th.
14. American dollar of 1883, donated by A. W. Burrell, Architect.
15. Head of millet grown by T. R. Stewart, of Fresno, California.
16. Samples of wheat grown by Hon. John Bidwell.
17. Constitution, By-Laws, and list of members of the California Pioneers.
18. Copy of specifications of new building.
19. List of executive, judicial, and legislative officers of the State, and of the State and County and City Governments for 1883.
20. Copy California Patron of June 2d.
21. Shoe worn by President Finigan's trotting stallion, "Santa Claus," when he made his record of 2:18, as a five-year-old.
22. Names of Architect, Superintendent, and Contractor.
23. Pacific Churchman, May 15, 1883.

The building was to have been completed by September first, but owing to an unforeseen accident, caused by the carelessness of one unfortunate man, who lost his life thereby, it was not. The Board deemed it proper to extend the time of the contractor three months, which proved to be insufficient, as the great magnitude of the work occupied a much longer period than was contemplated. Not being able to occupy the building for the annual Fair of 1883, the Board allowed the contractor all the time he required.

On the twenty-second day of January, 1884, the building was formally accepted from the contractor as completed—the time occupied in building this immense structure being eight months and six days. The building, as completed, contains 980,000 feet of rough lumber; 78,000 feet of rustic; 35,000 feet of wainscoting; 160,000 feet of flooring; 1,000,000 shingles; 56 tons of wrought iron; 12 tons of cast iron; 50,000 pounds of nails; 39,600 square feet of glass; 12,000 feet of gas pipe, and 2,000 gas burners, including the art gallery jets. About 10,000 extra bolts, over and above those specified, have been used in the construction of the building.

The dimensions of the building as it now stands, are as follows: From ground to top of flag pole, 160 feet; from floor to peak of main trusses in dome, 108 feet; height of dome, 40 feet; height of towers, 88 feet; from ground to apex of roof, 89 feet; from the ground to eaves of building, 50 feet. As an extra precaution, lateral rods have been placed between each set of trusses, thereby tying the entire roof together. There is a rod of iron encircling the building on top of wall plates. The main building rests upon posts in each wing, set twenty-eight feet apart, resting on piles driven thirty feet and capped with concrete. The dome rests upon four main posts weighing six tons each, set upon three piles driven to gravel and capped by an eight-foot concrete base. The entire lower floor rests separately on six hundred and seventy-eight brick piers set in cement, and is not attached in any way to the walls of the building. The eight-inch brick wall that fills in the space between the main posts, merely supports six feet of the floor joist. The area of the building is as follows:

Main hall.....	45,600 square feet
Horticultural hall.....	12,000 square feet
Machinery hall.....	12,000 square feet
Industrial hall.....	12,000 square feet
Art gallery.....	12,000 square feet
Conservatories.....	12,800 square feet
Promenade galleries.....	17,600 square feet
Total of floor space.....	124,000 square feet

COST OF BUILDING.

R. McKillican's contract, exclusive of plumbing and gasfitting	\$74,363 00
Architect and Superintendent fees.....	3,100 00
Advertising.....	308 80
M. R. Rose, boring for foundation.....	40 00
Gasfitting.....	2,188 20
	\$80,000 00

In addition to this the Society has expended the following:

Plumbing and gas fixtures	\$2,585 80
Frosting skylights	665 60
Painting gaspipes and oiling floors	100 00
Building new sidewalk	691 00
Filling conservatories, etc.	372 75
Extra gasfitting, etc.	150 00
Extra ladders, windows, and hose drums	363 00
Six hundred feet of hose	356 72
	<u>\$5,284 87</u>

ANNUAL MEETING.

The Board of Directors held their annual meeting on Friday, February 1, 1884, with President Finigan in the chair, and the following members present: Chase, La Rue, Green, Carr, Shafter, Hancock, Newton, Rose, and Coleman. Absent: Boggs and Shippee.

The Secretary's report for the year ending February 1, 1884, was read, adopted, and ordered to print, and to be transmitted to the Governor.

ELECTION OF OFFICERS.

The Board of 1884 is composed of the same members as was the Board of 1883, Messrs. La Rue, Chase, and Boggs having been reappointed by the Governor.

The next order of business being the election of President, the presiding officer declared nominations to be in order.

Mr. Carr placed P. A. Finigan of San Francisco in nomination.

Mr. Green nominated H. M. La Rue of Sacramento.

Upon motion the nominations closed.

The vote by ballot being taken, resulted as follows: First ballot—Finigan, five; La Rue, three; Shippee, one; Green, one; whole number of votes cast, ten; necessary to a choice, six. No choice having been made, another ballot was ordered. Second ballot resulted the same. Mr. La Rue then withdrew his name. On the third ballot, Mr. Finigan received six votes, and was declared elected by Director Shafter.

Mr. Finigan, on taking the chair, thanked the Board for the honor conferred, and promised to work in the future, as he had in the past, for the interest of the Society.

The election of Secretary was not deemed necessary, as that officer held at the pleasure of the Board.

The other officers chosen were as follows: Treasurer, L. A. Upson; Superintendent of Park, Christopher Green; Superintendent of Pavilion, W. P. Coleman.

Upon motion, the following committee was appointed to have charge of the exposition building: Directors La Rue, Hancock, Coleman, and Secretary Smith.

A new code of Racing Rules was presented by Director Shafter, for the consideration of the Board. They were ordered to print, to be passed upon at the next meeting.

The President appointed the following committees:

ON PREMIUM LIST.

Messrs. Carr, La Rue, Green, Coleman, and Shippee.

ON SPEED PROGRAMME.

Messrs. Newton, Shafter, Chase, Rose, and Hancock.

Both committees to report at the next meeting, which was set for Wednesday, March 12, 1884, at 2 o'clock P. M., to which date the Board adjourned.

EXHIBITS AT THE FAIR, 1883.

REPORT OF COMMITTEE ON COMBINED HEADERS AND THRASHERS.

SACRAMENTO, September 15, 1883.

To Whom it May Concern:

In compliance with the published conditions incorporated in the Premium List for 1883, wherein a premium of \$250 was offered for the best combined header and thrasher of California manufacture, "a committee of five, to be appointed by the State Board of Agriculture, to examine these machines in the field, while in operation, and report to the Board, by whom the

award is to be made, the machine examined, or duplicates thereof to be exhibited at the Fair," the State Board appointed the following named Directors to make the examination: P. A. Finigan, H. M. La Rue, G. W. Hancock, and John Boggs. The committee proceeded to San Joaquin County, and, after due examination, made the following report:

SACRAMENTO, September 14, 1883.

Mr. President and Directors of the State Board of Agriculture:

GENTLEMEN: Your committee, appointed to examine the combined header and thrasher in the field, have made a careful examination of a number of machines of this character, the most of which were in active operation, and, after due consideration, we are of the opinion that the combined header and thrasher known as the "Shippee Machine" is the most complete, economical, labor and grain saving, and better adapted to the use of the average farmer. We believe that it is the greatest invention of the age for the purposes intended, and will completely revolutionize our system of harvesting and thrashing, and it will make a very material reduction in the cost of harvesting our crops. We believe it will, by this method, not cost to exceed two cents per bushel to put the grain in the sack, to the farmer. We are of the opinion that the Shippee Machine is entitled to the award offered, and would so recommend.

All of which is respectfully submitted.

P. A. FINIGAN.
H. M. LA RUE.
G. W. HANCOCK.
JOHN BOGGS.

SACRAMENTO, September 15, 1883.

At a meeting of the State Board of Agriculture, held on this date, the above report was submitted and unanimously adopted, and the award of \$250 made to the "Shippee Machine," in accordance with said report.

EDWIN F. SMITH, Secretary.

* RULES AND CONDITIONS, WITH COMMITTEE'S REPORT.

Rules and conditions issued by the Society:

First—Exhibitors must furnish the eggs for incubation in their respective machines.

Second—The eggs in each machine to be counted, and marked at the time the machine is set, by the Secretary, who shall verify to the Committee of Award the eggs marked.

Third—The percentage of hatching to be the basis of award.

Fourth—The several hatches to be set so as to come out September 13th, or thereabouts.

Fifth—All machines to be cared for by exhibitors, or their representatives, only at stated hours, morning and evening, and at no other time will any person be permitted to have access to them under any circumstances.

Sixth—The several machines may be set up at any time desired. In case the noise or confusion in new building is injurious, they may be set up in the old building.

Detail of those Conditions.

SACRAMENTO, August 24, 1883.

It is agreed that the Petaluma Incubator Company place the same number of eggs in their incubator that the Golden Gate Incubator has when full. It is also agreed that the eggs are to be tested on the sixth day from setting. Each competitor to test his eggs on that day—take out of his oven all clear and rotten eggs; also all dead ones. If he happens to break an egg that has in it a live chicken, to be replaced by one from one of his machines. After the eggs are tested, the one that has the excess of eggs to remove from his incubator enough to make the number of eggs in each machine equal in number. Any chicken that frees itself from the shell is to be counted as a live one. Each competitor to be allowed to be with his machine while hatching, that is, when the chickens commence to come out of the shell.

Each one to be allowed to test his eggs at any time in the presence of his competitor. This agreement to be subject to the approval of Edwin F. Smith, Secretary of the State Board of Agriculture; the testing done on the sixth day by one representative of each machine.

[Signed:]

I. L. DIAS.
L. C. BYCE.
C. R. LOOK.
GEO. E. DAVIS.

The Result—Report of Committee.

We, the undersigned, Committee on Incubators, have examined the same with reference to the percentage of hatch, and report as follows: Out of one hundred and eighty-seven eggs placed in each machine, the Petaluma Incubator hatched one hundred and fifty-four chickens, or eighty-two per cent, and the Golden Gate Incubator hatched one hundred and nine chicks, or fifty-eight per cent.

REPORT OF RACES.

FROM THE "BREEDER AND SPORTSMAN."

FIRST DAY.

The racing at the State Fair commenced on Monday at noon. In the Judges' Stand were H. M. La Rue, John Boggs of Colusa, and J. McM. Shafter. The timers were Messrs. Babcock and Carroll, and G. W. Hancock acted as starter for the running races. In the first race, Introduction stake, there were four entries—Aunt Betsey, Premium, Major Whitesides, and Jim Renwick, who were started in the order named. Pools sold: Renwick, sixty dollars; Premium, thirty dollars; field, fifteen dollars. The horses, on the second attempt, were started, with Premium and Aunt Betsey fully thirty yards in advance of Renwick and Whitesides. This gave the race to the big mare—a bit of poetic justice, for last year, in the same race on the same track, she was sent off fifty feet behind, and had to run through her field to win. Betsey fell back when they had gone a couple of rods, and Renwick went for the race, but could not catch Premium, who won by half a length, Jim Renwick second, Whitesides third.

SUMMARY.

AGRICULTURAL PARK COURSE, SACRAMENTO, September 10, 1883.—Running race—Introduction stake. Three quarters of a mile dash; \$35 entrance; \$10 forfeit; \$200 added; \$50 to second horse, and third to save stake.

John Mackey's ch. m. Premium.....	1
Levi Knott's ch. g. Jim Renwick.....	2
F. Dupoister's b. h. Major Whitesides.....	3
F. Dupoister's b. f. Aunt Betsey.....	4

Time—1:14½.

Jim Renwick was a hot favorite for the race, and his backers felt sore at being beaten out of their money by the advantage given to Premium at the start. To be sent off thirty yards behind the flag meant that Jim Renwick had to run the three quarters of a mile in a trifle better time than 1:13 to win the race, and that he did so well proves him to be a horse of marvelous quality. No excuse could be made for the starter. He clearly lost his head, and convinced every one that he was not the man for the place.

The second race was the California Derby stake, for foals of 1880; one and one half mile dash; fifty dollars entrance; play or pay; thirty dollars added; second horse, one hundred dollars; third horse, fifty dollars. There were eleven entries, but only two started—Geo. Howson's Augusta E, and J. B. Haggin's Young Flush. Pools sold: Augusta E, one hundred dollars; Young Flush, thirty-five dollars. Augusta had the pole. The horses got a very even send-off on the first start. The last quarter of the race the animals went round the

course side by side; Augusta E hard held. In the straight, Howson gave his mare her head, and riding easily, drew away from Young Flush, winning as she liked.

SUMMARY.

AGRICULTURAL PARK COURSE, SACRAMENTO, September 10, 1883.—Running—California Derby stake for foals of 1880. One and one half mile dash; \$50 entrance; play or pay; \$300 added; second horse, \$100; third horse, \$50.

George Howson's br. f. Augusta E.	-----	1
J. B. Haggin's ch. f. Young Flush	-----	2

Time—2:42½.

The third race was the California Annual stake for two-year olds; foals of 1881; dash of one mile; one hundred dollars entrance; twenty-five dollars forfeit; two hundred and fifty dollars added. There were twenty-one entries, with two starters—J. B. Haggin's bay filly Schoolgirl, and Palo Alto Stock Farm's black filly. They started in the order named. Schoolgirl had about a neck the advantage in the start, which she increased to the quarter, when the black filly went to the front and soon left her forty yards behind. The Palo Alto filly won the race in a gallop.

SUMMARY.

AGRICULTURAL PARK COURSE, SACRAMENTO, September 10, 1883.—Running—California Annual stake for two-year old foals of 1881. Dash of one mile; \$100 entrance; \$5 forfeit; \$250 added; second horse, \$100; third, \$50.

Palo Alto Stock Farm, blk. f.	-----	1
J. B. Haggin's b. f. Schoolgirl	-----	2

Time—1:44½.

The day's sport closed with the trot for the 2:25 class, in which there were three starters, viz., Pat Farrell's Magdallah, Newland & Punyea's Poscora Hayward, and L. J. Rose's Del Sur. Magdallah sold for one hundred and fifty dollars; Poscora Hayward, one hundred and thirty dollars; Del Sur for forty-seven dollars and a half. It was a big betting race, and the money was planked down as fast as Killip & Co. could make out tickets. Both Magdallah and Poscora made trouble for the starter; but at last they got a send-off, with a little advantage to the gray, and Del Sur in the rear. So they went to the half (1:11), where Magdallah made a nasty running break, fell to the rear, and did not go for the heat. Del Sur made the gray trot fast, and was not far behind, when Poscora Hayward went under the wire winner in 2:23½; Magdallah a poor third.

As Poscora Hayward trotted well, and dispensed with his usual trick of skiving and breaking, he was played for a winner, and pools sold lively with him for favorite at two hundred dollars, Magdallah one hundred and thirty, and Del Sur ten. This heat, the start was in favor of Magdallah, with the favorite behind. A break at the quarter sent the mare back, and another break lost her a good deal of ground. Del Sur made a brush for the heat at the three-quarter pole, but could not stay the pace, and fell back to third place. Poscora Hayward won easily, Magdallah second, Del Sur third. Time—2:27½. The half was made in 1:15.

The backers of Magdallah evidently knew something, for they still bought her freely at one hundred and thirty dollars against two hundred and ten for Hayward, and eight for Del Sur. The horses were started on the third heat on the second attempt, with Magdallah slightly in the lead, Poscora second, Del Sur third. This position

was maintained to the outcome; Magdallah winning easily by several lengths in 2:25½, Poscora second, and Del Sur third. Poscora broke badly.

There came another chop in the betting, Magdallah selling favorite at one hundred dollars to fifty for the field. The mare led at the start, and went to the half in 1:14. There Poscora made a nasty break, and was never again in the race. Magdallah won as she liked, Del Sur a poor third. Time—2:26½.

Pools, eighty to twelve dollars on Magdallah, and but few backers for the field. Magdallah again won the heat as she liked; Del Sur just inside the distance. Time—2:27½.

SUMMARY.

AGRICULTURAL PARK COURSE, SACRAMENTO, September 10, 1883.—Trotting, 2:25 Class. Purse, \$1,200.

P. Farrell's ch. m. Magdallah	3	2	1	1	1
Newland & Pumyea's gr. h. Poscora Hayward	1	1	2	2	2
L. J. Rose's blk. h. Del Sur	2	3	3	3	3

Time—2:23½; 2:27½; 2:25½; 2:26½; 2:27½.

SECOND DAY.

On Tuesday, the sport was all trotting. The judges were L. J. Rose, P. A. Finigan, and Chris. Green. The first race was a trotting stake for two-year olds, in which Carrie C and Cora started; Carrie C selling favorite at one hundred dollars to six dollars. The favorite was the only horse in the race; she jogged the first heat in 2:53, and then distance being waived, went for a record. She succeeded in beating the best two-year old record ever made in a race (her own made at Oakland last week, 2:30½) by two and three quarter seconds. She went to the quarter in thirty-five and a half seconds, slowed down a little, marking the half in 1:12, and trotted the full mile without break, skip, or helper in 2:27½. Cora, forty yards more than distanced.

SUMMARY.

AGRICULTURAL PARK COURSE, SACRAMENTO, September 11, 1883.—Trotting stake, mile heats, for two-year olds.

Palo Alto's br. f. Carrie C	1	1
F. L. Smith's b. f. Cora	2	dis

Time—2:53; 2:27½.

Next came a trotting race for four-year olds and under, for a stake of one thousand dollars. There were nine entries: Adrian, Telegraph, Sister, La Grange, Lucille, Bonnie Wood, Bonnie, Hazel Kirke, and Adair, started in the order named. In the pools Bonnie sold for eighty dollars, Lucille two dollars, field fourteen dollars. The scoring before the start was tedious; eleven times they tried to get off before the bell tapped. Bonnie led at the turn, Bonnie Wood second up, La Grange third, and the others all bunched in the rear. Down the backstretch they were all strung out, La Grande falling back to fourth and Adrian going up. They made no further change, Bonnie winning easily, Bonnie Wood second, Hazel Kirke third,

Adrian fourth, La Grange fifth, Sister sixth, Adair seventh, Telegraph eighth, Lucille distanced. Time, 2:26½.

A hundred to twelve dollars on Bonnie, and but few takers, was the cry after the heat, and the buyers of the short end only played the field on the off chance that Palo Alto's representative would break her neck.

After three scores the horses started, La Grange slightly in the lead. Bonnie was well in front at the quarter (0:36), Bonnie Wood well up. At the half (1:13) Hazel Kirke was coming up, and near the turn got second place. Bonnie won easily, Hazel Kirke, La Grange, Bonnie Wood, Adrian, Adair, Telegraph, and Sister coming in the order named. Time, 2:29.

This ended the betting. Bonnie broke just past the score on the third heat, losing several lengths. But she collared the field and took the lead on the backstretch and won easily in 2:32.

SUMMARY.

AGRICULTURAL PARK COURSE, SACRAMENTO, September 11, 1883.—Trotting. Purse \$1,000, for four-year olds and under.

Palo Alto's b. m. Bonnie	1	1	1
J. B. McDonald's b. f. Hazel Kirke	3	2	3
H. W. Meeks' br. f. Bonnie Wood	2	4	5
C. David's c. f. Sister	6	8	2
L. J. Rose's blk. g. La Grange	5	3	6
J. M. Learned's b. h. Adrian	4	4	4
W. F. Smith's b. g. Adair	7	6	7
J. McIntosh's b. g. Telegraph	8	7	8
John Williams' br. m. Lucille			dis.

Time—2:29½; 2:29; 2:32.

The race for the 2:50 class brought out three entries only—Allan Roy, Barney B, and Bay Frank. The night before pools were sold on the race with Adair and Barney B in the field for ninety dollars, Bay Frank one hundred and forty dollars, and Allan Roy ten dollars. Adair did not start, and the judges declared all field pools off. Bay Frank and Allan Roy sold even up. Bay Frank took the lead at the start, broke and let Allan Roy go to the front. At the quarter (0:34½) Allan Roy was three lengths ahead, which distance Bay Frank nearly closed up at the half in 1:10. Then Allan Roy fell back, and Bay Frank won as he liked, Barney B second, Allan Roy third. Time, 2:25.

Bay Frank looked peevish and out of sorts, and those who had seen him at Oakland played him to lose, making Allan Roy favorite at one hundred and sixty dollars to one hundred and ninety dollars for the two bays. The start was even. Allan Roy led at the quarter (0:36½), but broke as he passed the pole, and fell back to third place. Bay Frank led to the half (1:12), and had it all his own way to the homestretch, where he made a wretched break. He had to be pulled to a standstill before he would trot, and lost so much ground that Allan Roy coming up with a rush won handily, Barney B third. Time, 2:28.

The friends of the "Sacramento Wonder," believing it impossible to beat their horse, howled fraud. Some wanted the pools declared off, and others demanded a new driver for Bay Frank. In response to the clamor of the latter party, the judges took down Pete Williams, and put Walter Mayburn, Rose's driver, in his place. The change was not a success. Bay Frank led as before to the half (1:12), made

a bad break on the homestretch, and Allan Roy took the heat easily, Barney B third. Time, 2:24½.

Then Allan Roy sold favorite at one hundred dollars to twenty-five dollars. The fourth heat was just the same as the third. Bay Frank had it all his own way to the homestretch, where he made a bad break and lost the race. Allan Roy won easily, Barney B second. Time, 2:28½.

SUMMARY.

AGRICULTURAL PARK COURSE, SACRAMENTO, September 11, 1883.—Trotting, 2:30 Class. Purse, \$1,000; mile heats, 3 in 5.

Time—2:25; 2:28; 2:24½; 2:28½.

THIRD DAY.

At the Park on Wednesday the fine weather and promise of sport attracted an attendance of eight thousand people. The first event on the card was the Maturity Stake for four-year olds, for which Duke of Monday walked over for the forfeits. The second was for the two-year olds, 1½ miles, the first race at that distance for two-year olds ever run in this country. The starters were Shenandoah, Sweetbriar, Bachelor, and E. J. Baldwin's Grinstead—sister to Clara D, filly. The Palo Alto representative was a great favorite in the pools; the aggregate being Shenandoah one hundred dollars, Bachelor twenty dollars, field eighteen dollars. The starters exercised more care than they did on the first day, and the ambitious youngsters got away on even terms, Sweetbriar taking the front place under a strong pull, and they were around the turn and down the backstretch in a line, Sweetbriar first, Bachelor second, Shenandoah third, and the Santa Ana colt last. Around the lower turn Shenandoah wound up to second place and they came into the straight at a fast pace. Up the stretch whips were drawn and the finish was a game and futile effort to head Sweetbriar. Before they were half way home Bachelor fell back beaten, Sweetbriar came under the wire with something to spare, Shenandoah second by a length, the Baldwin filly third, Bachelor last. Time, 2:58½.

SUMMARY.

AGRICULTURAL PARK COURSE, SACRAMENTO, September 12, 1883.—Purse \$250, of which \$50 to second horse. One mile and one eighth.

John Mackey's b. f. Sweetbriar, by Virgil; dam, Impudence	1
Palo Alto's b. c. Shenandoah, by Shannon; dam, Demirep	2
E. J. Baldwin's ch. f., by Grinstead; dam, Sister to Clara D.	3
Hill & Gries' b. c. Bachelor, by Hoekhocking; dam, Maid of the Mist	4

Time—1:58½.

This time, 1:58½, is a most wonderful performance for two-year olds. The best time ever made was 1:53½, Rosalie, four years, about eighty pounds up. The best two-year old time ever made was 1:58, by Gossip, at Monmouth Park, sixty-seven pounds up.

Next came the Nighthawk Stake, for all ages, one mile. Nighthawk, Augusta E, Jim Renwick, Lucky B, and Ella Doane came to

the post with positions in the order named. Some heavy betting was done on this run, Lucky B having the call. The rate was Lucky B one hundred and fifty dollars, Renwick ninety-five dollars, field one hundred and twenty-five dollars. After many failures to get away they were brought to a line and told to go. Renwick had a length the best of Lucky B, who was second, Ella Doane third, Nighthawk further back and in the hands of her trainer, Augusta E still further back and at a standstill, and at the first turn Ella Doane went to second place, and strung out in a string they went to the quarter in 0:25 and the half in 0:50. In the lower turn Lucky B moved up again, and where they entered the straight was following Renwick close. Appleby brought Ella Doane up with a rush and lapping Renwick had Lucky B securely pocketed. Ella made a fight for the lead, but could only get to Renwick's girth, the big gelding being first to the wire by half a length; Ella Doane second, Lucky B third, Nighthawk and Augusta E unplaced. Time, 1:42½.

SUMMARY.

AGRICULTURAL PARK COURSE, SACRAMENTO, September 12, 1883.—Running—Nighthawk Stake. Dash of one mile for all ages; \$50 entrance, \$15 forfeit, \$200 added, second horse \$75, third \$25; stake to be named after winner if Nighthawk's time (1:42½) is beaten.

George Howson's br. f. Augusta E (3) by Monday; dam, by Norfolk.....	0

Time—1:42½.

In the selling race only Laura and Maria F faced the starter; Maria F being the fancy of the pool buyers at one hundred and twenty dollars to sixty dollars. The first heat was without notable feature. The start was exactly even and the two ran head and head for three quarters of a mile, Laura coming away at the finish and winning by two lengths. Time, 1:45½.

In the second heat Laura won as she liked in 1:48.

SUMMARY.

AGRICULTURAL PARK COURSE, SACRAMENTO, September 12, 1883.—Selling race. Purse \$250, of which \$50 to second; entrance free; one mile and repeat; \$1,000 fixed valuation; 2 pounds off for each \$100 under and 2 pounds added for each \$100 under fixed value.

J. B. Chase's ch. f. Laura (3) \$800, by Shannon; dam, Folly.....	1	1
John Mackey's ch. m. Maria F (4) \$500, by Leinster; dam, Flush.....	2	2

Time—1:45½; 1:48.

The event of the day in the estimation of the speculators was the trot for the 2:22 class. Brigadier, Manon, and Vanderlynn started. The odds in the pools were: Brigadier four hundred dollars, Manon two hundred and twenty dollars, Vanderlynn one hundred and twenty dollars, and at this rate money poured into the box in a continuous stream. Vanderlynn drew the pole, with Manon second, and Brigadier outside.

First Heat—At the start both Manon and Vanderlynn left their feet, the mare making a compound break that brought her almost to a standstill before she resumed her trot. In the meantime Brigadier went on slowly, and at the quarter, in 0:38, Vanderlynn was still four lengths behind him, and Manon a distance back. Down the backstretch McDonald waited and reached the half in 1:16½, with Vander-

lynn on his wheel, and Manon nowhere near. From there home Vanderlynn made such a push that Brigadier was compelled to trot the last half in 1:10 to beat him, the gelding not giving up the fight till he reached the distance post, where he broke. Manon dropped inside the flag by a length, Brigadier first, Vanderlynn second, Manon third. Time, 2:26½. In the pools Brigadier went up to six hundred dollars, Manon rated at one hundred and twenty-five dollars, and Vanderlynn one hundred dollars, an immense business being done.

Second Heat—At the start Brigadier made a playing break very similar to Manon's performance in the preceding heat. He gained his trot quicker but was ten lengths behind, nevertheless. Havey slowed up and passed the quarter in 0:40 and the half in 1:17. At that point Brigadier was on even terms. From there home the horse was freely whipped, but Manon was only steadied and apparently never on her speed. She led him over the score in a half stride, Vanderlynn third; time, 2:27½. The last half in 1:10, without an effort, was a revelation that the pool buyers were slow to comprehend. Brigadier held his place in the estimation of bettors and business went on at a lively rate; Brigadier, three hundred and ten dollars; Manon, one hundred and ninety dollars; Vanderlynn, fifty dollars.

Fourth Heat—Vanderlynn broke at the start, Manon led off at a smooth and quiet pace, going to the quarter in 0:36, half in 1:12, and home in 2:24½, Brigadier second, Vanderlynn third. The backers of Brigadier had fully digested the idea by this time and there was a pell mell rush to get out. Manon, four hundred dollars; Brigadier, seventy-five dollars; Vanderlynn, thirty-five dollars, was the rate, and some heavy bettors succeeded in saving themselves or in reducing their losing to a nominal sum.

Fifth Heat—Manon laid alongside of Brigadier from the start and won as she liked. Time: quarter, 0:36; half, 1:12½; mile, 2:25½.

SUMMARY.

Time—2:26½; 2:27½; 2:24½; 2:25½.

FOURTH DAY.

A special trot for a purse of six hundred dollars commenced the sport on Thursday. Sister, Bonnie Wood, Tilton Almont, Telegraph, and Adair were the starters. The race caused a good deal of speculation, Adair selling for one hundred and sixty dollars, Bonnie Wood, one hundred and five dollars; field, seventy-five dollars. Sister broke at the start, Bonnie Wood leading off, and they went past the quarter in a string. After the half was passed Tilton Almont closed and passed to the front, winning the heat by six lengths; Bonnie Wood, second; Telegraph, third; Adair, fourth; Sister, distanced. Time: quarter, 0:37; half, 1:14; mile, 2:26. The field now sold favorite in

the pools at one hundred and fifty dollars; Adair, one hundred and thirty dollars, and Bonnie Wood, one hundred and twenty dollars.

In the second heat Tilton Almont took the lead for three quarters of a mile, when Bonnie Wood went to the front and won easily; Almont second, Telegraph third, Adair fourth. Time: 0:38; 1:16; mile, 2:34½. Tilton Almont pulled up quite lame and was withdrawn. Bonnie Wood was then made first favorite, selling for two hundred dollars; Adair, one hundred and five dollars; field, twenty-five dollars.

The third heat was an easy thing for Bonnie Wood, who was never headed, and won by a length from Adair, Telegraph third. Time: 0:37½; 1:16; mile, 2:34½.

In the fourth heat Bonnie Wood led off, but was very unsteady all the way on the backstretch, and about the three-furlong pole she broke up, staggered a few steps, and fell dead on the track. Telegraph was first to the wire, Adair a fair second. Time: 1:18½; mile, 2:38½. This was a dreadful blow to the heavy bettors who had gone in on Tilton Almont and then played Bonnie Wood as a saver. It gave all the money to the men who buy the short end because it is cheap, and whose only hope to win is that the favorite may fall down as in this instance. Bonnie Wood was a four-year old mare owned by H. H. Meek, of San Leandro; she was by Nutwood; dam, Bonnie Belle, by Belmont, and was a most promising and valuable animal.

The fifth heat was easily won by Adair, Telegraph making a losing break near the distance. Time: 2:39½.

Pools sold even upon the pair who are both four-year olds. In the sixth heat Telegraph was badly beaten under the hands of a new driver. Time: 2:40½.

Then Telegraph was given back to his old driver, who won the race by taking the two next heats in 2:38½ and 2:40½.

The second race was for three-year olds, and Sallie Benton, Lucille, and Centre were the starters. Sallie Benton had the call in the betting, and won the race, taking the second, fourth, and fifth heats. The first heat was won by Lucille, and the third one was a dead heat between Lucille and Centre. Time: 2:28½; 2:31½; 2:29½; 2:30; 2:30½.

FIFTH DAY.

Friday was the great day of the meeting. It brought the largest attendance to the track and had the largest bill of races, and to preserve the unity of things one of these was by long odds the leading betting event of the week. The postponed pacing race was called up at noon, and from that time till dark the game went on without cessation or any considerable halt. Spectators, even the most grubby occasional in the stands, had no claim of lack of value received for the money left at the gate, and the old habitués of the course were willing to acknowledge that they all had enough for one brief day. The weather was a trifle warm, but not severely so. Up to the time the pacers were called out it was not supposed that the race would be of much interest, but it proved otherwise. The favorite was badly "downed," and some incidents occurred that lent variety to the proceedings. The starters were Fred Ackerman, Prince, Gray Frank,

and Shaker, and positions were in the same order. Gray Frank was engineered by a quiet-appearing young man named McDowell, who has recently arrived from the east under engagement to Mr. Valensin, of Arno farm. McDowell handled him with great skill and judgment, and caught him in his breaks better than any driver who had undertaken to guide him. After all the vexations they got away from the wire at last, and the horse and driver that were the chosen of misfortune for the moment came out from under the cloud and landed the race and money with a good deal of *eclat* and finish.

First Heat—Prince and Shaker both broke at the word, but Prince was handy and led the field to the quarter in 0:38½; Frank second, Ackerman third, Shaker fourth. Down the back quarter Frank closed with Prince, and at the half in 1:14 was on his wheel. A few strides more and Prince broke and fell back to third position. Up the homestretch Shaker made a lively brush and lapped Frank out, Prince third, Ackerman fourth. Time, 2:27½. Prince still held his place in the betting, but Frank found backers, and Shaker's last quarter strengthened the field. The average odds were now, Prince one hundred dollars, Frank seventy-seven dollars and fifty cents, field sixty-five dollars.

Second Heat—Prince led from the wire and they strung out around the turn with shaker second, Ackerman third, and Frank last. Prince reached the quarter in 0:38. Frank worked past the other two, and at the half, where the watch showed 1:15, he collared the favorite. Prince broke up and Frank came around the lower turn with a lead of four lengths, but in the straight work of the last quarter Prince closed the gap at a pace that was too rapid for Frank, for the gray left his feet at the drawgate, yielding first place to Prince, Shaker third, Ackerman fourth. Time, 2:26. Home from the half in 1:11 was great for this class of horses, but Prince was quite done up by the effort. His backers rallied, and quotations were, Prince one hundred and sixty dollars, Frank ninety dollars, field forty-five dollars.

Third Heat—Prince and Frank got away together, but on the first turn Prince broke up and fell back. Frank paced the quarter in 0:36, with Prince four lengths behind, Ackerman and Shaker going together three lengths further back. They went to the half in 1:12½ without change, except that Shaker broke and fell further back. Up the homestretch Prince closed the gap partially, but not enough to give his friends substantial hope. Frank winning easily, Prince second, Ackerman third, Shaker fourth. Time, 2:26. There was now a movement to "get out," and Frank stock took a little boom. Closing prices were, Frank two hundred dollars, Prince eighty dollars, field eleven dollars. The judges changed drivers behind Shaker, and the band set out for the

Fourth Heat—Prince and Shaker both broke at the start, and Frank took a commanding lead. He passed the quarter in 0:36, and the half in 1:11½, but from there came home quietly, winning the heat and race, Prince second, Ackerman third, Shaker fourth. Time, 2:31½.

J. T. McIntosh's b. g. Fred Ackerman	4	4	3	3

Time—2:27½; 2:26; 2:26; 2:31½.

The regular programme of the day was now entered upon. The first number on the card was the free handicap, two miles and a quarter. Acceptances were as follows: Fred Collier one hundred and ten, May D one hundred and twelve, Boots one hundred, Wildidler one hundred, Birdcatcher ninety. The race was the great betting event of the meeting, and many of the heavy losers of the preceding days showed a disposition to "plunge," and make even or do worse. At the pool rooms, on Thursday evening, business opened lively with Collier and May D about even, the field also finding some favor. As the selling went on Collier drew ahead a little and at the close was the established favorite. On the track, before the start, a pile of money was put on, the rates being, Collier two hundred and thirty dollars, May D one hundred and ninety dollars, field one hundred and fifty-five dollars. The track was not especially prepared for the run, and with the battering of the trotters and the pressure of the crowds that swarmed there in the morning to see the competition of lady riders, the stretch was hard enough to knock out any horse that had not ligaments of steel. They were started from the three quarter pole with an even chance, and May D cut out the work at once. When they passed the stand they were strung out in a line, May D first, Boots second, Collier third, Birdcatcher fourth, and Wildidler last. They ran steadily in this order for three quarters of a mile, when May D pulled back to second place, and when they entered upon second mile, Boots was leading. Around the upper turn May D went forward again and in the straight of the backstretch Collier was seen to be slowly moving up. At the half he was on May D's hip, and at the three quarter mark his nose was in front. There was a flourish of whips all round, but Collier came away steadily and won by three lengths. May D. second, Boots third, Birdcatcher fourth, Wildidler fifth. Time, 4:01½. When Collier came back to the stand he was limping, and Wildidler, though he had finished strong, was completely gone on one fore leg, and it was with difficulty that he was got to the stable. Boots was also complaining but not so loudly as the other two mentioned. The race showed May D to be a mare of remarkable gameness and substance. Private watches made the last two miles 3:31½—a tremendous pace—and although May D drove Collier to the drawgate at such a rate over a track almost as hard as a stone pavement, she showed no ill effects and was not at all done up by the race.

SUMMARY.

AGRICULTURAL PARK COURSE, SACRAMENTO, September 14.—Trotting. Free handicap stake, \$50 each, \$20 if declared; \$300 added; \$100 to second horse, third to save stake. Two miles and a quarter.

Time—4:01½.

Next on the list was a colt and filly stake for two-year olds, one mile. The starters were Shenandoah, Schoolgirl, Bachelor, John A, Philip S, and two from Mr. Baldwin's stable. A great deal of money was laid on this race also. Two circumstances conspired to make the betting heavier than it would have otherwise been. One of these

was an impression that the Palo Alto stable would start the black filly, by Wildidle, from Frolic, which Mr. Walsh had never intended to do, and the other was the great trial of Schoolgirl, who had run the track from wire to wire in 1:40 with one hundred and ten pounds up. Rather an amazing performance for a two-year old filly of Schoolgirl's size, but there is no doubt that she did it. Closing prices were: Schoolgirl, three hundred and fifty dollars; Shenandoah, three hundred dollars; field, one hundred and thirty-five dollars. They got away with only an ordinary start, but as well as could be expected from such a mob of restless youngsters. When the flag fell Carter gave Shenandoah the buckskin heartily, and the brown set the pace at a great rate. Duffy was on the favorite, and he did his best to close the gap on the backstretch, but Shenandoah had the race won and came to the score first by two lengths. There was some lively hustling for second place, and it resulted in a dead heat between Schoolgirl and E. J. Baldwin's chestnut filly, by Grinstead, from Josie C. Schoolgirl pulled up lame, and her racing days are most likely over. She was the fourth that had gone to the veterinary that afternoon.

E. J. Baldwin's ch. f., by Grinstead; dam, sister to Clara D.....	7

Time—1:44.

The third number was a purse for three-year olds. Dash of one mile. The starters were Lucky B, Marian, and Stanislaus, and in the pools Lucky was rated at two to one over both the others. At the start Stanislaus jumped to the front and led around the turn at a clipping pace. After passing the quarter, Lucky B moved up, but fell back again, and Stanislaus was first to the half, by two lengths, in 0:50. But that was the end of him. He dropped out of the race before the next furlong was run, and Lucky B won at a gallop, Marian second, Stanislaus way off one hundred and fifty yards.

SUMMARY.

Time—1:44½.

The last act was a mile and repeat, for all ages, with Laura, Grismer, Major Whitesides, Jubilee, and Rondo on the track. The betting was: Laura, two hundred and twenty dollars; Grismer, one hundred and ten dollars; field, eighty-seven dollars and fifty cents.

First Heat—Grismer had a slight advantage when the flag dropped, but Jubilee rushed off the fastest, leading to the quarter in 0:26½ and the half in 0:53. At that point the others were well bunched close

behind him. At the three-quarter pole Jubilee fell back beaten and Laura took his place. At seven furlongs she was a length to the best, but Grismer came through with a rush and beat her to the wire by a length, Laura second, Whitesides third, Rondo fourth, Jubilee fifth. Grismer was the cry of the speculators now, and around the pool stand the figures noted were: Grismer, two hundred and ten dollars; field, seventy-seven dollars and fifty cents; Laura, sixty-five dollars.

Second Heat—Laura challenged Grismer at the start and ran with him past the quarter in 0:26, but soon after gave way to Whitesides, who made one of his characteristic spurts and led the big chestnut to the half in 0:52, but before the turn was behind them Whitesides had joined the rear division, and Grismer won as he liked, the order at the finish being the same as in the first heat.

Time—1:46; 1:46.

SIXTH DAY.

The attendance showed a little falling off, but still there was a crowd. The weather was the finest of the week, cool, clear, and free from wind. The exercises opened with the consolation purse for beaten horses, carried over from the preceding day by the press of business. Marian, Ella Doane, Nighthawk, and Major Whitesides started. In the pools Ella Doane was quoted at one hundred and twenty dollars, Marian twenty-two dollars, field twenty-four dollars. The start was good as to three of the horses, but Nighthawk was practically left at the post in both heats through her own bad behavior. Whitesides made the running at once, closely followed by Ella Doane and Marian to the quarter in 0:25½. On the back quarter Marian pulled back and Nighthawk took third place, Whitesides passing the half in 0:50½. From there Ella commenced gaining on him, and at the draw-gate had him beaten, when suddenly Marian swept past on the inside, winning the heat by two lengths, Ella second, Whitesides third, Nighthawk fourth. Time—1:44½. Ella still held her place in the good opinion of the speculators, but at reduced figures. Sales, Ella Doane one hundred and fifty dollars, Marian one hundred and ten dollars, field forty-five dollars.

In the second heat Ella and Marian got together and kept close company to the quarter where Ella showed in front (time 0:25½) and to the half in 0:51, without material change. Whitesides and Nighthawk three lengths back. Near the five furlong pole Whitesides wavered and fell, never to rise again. Ella and Marian came up the

straight at a rattling rate, but at the finish Marian drew ahead, winning the heat and race, Ella second, and Nighthawk third. Time—1:44. An investigation revealed that Major Whitesides had turned the fetlock joint of the left fore leg, and the force of the fall had made a compound fracture of the limb. He was destroyed. He was owned by W. B. Todhunter, of Washington, Yolo County.

SUMMARY.

Time—1:44½; 1:44.

*Fell and did not finish.

The free-for-all trot was then put on. The starters in this affair were Vanderlynn, Manon, and Nellie R, and the talent seemed a little mixed as to which had the best of it, Palo Alto or Petaluma. They finally inclined a little towards the daughter of Nutwood, and when the contestants appeared on the track the prevailing rate was Manon four hundred dollars, Nellie R three hundred and seventy-five dollars, Vanderlynn seventy-seven dollars and fifty cents. The decree of the dice box gave the bay horse the pole, Manon second, and Nellie R the outside position.

First Heat—When the word was given Manon had half a length the best of it, and the two mares went steadily together to the quarter, Vanderlynn breaking on the turn and falling back. On the back-stretch Nellie moved up and the two went head and head for a furlong, where Nellie fell back again. They came around the lower turn with Manon in front by half a length, and Vanderlynn three lengths behind. As they swung into the last quarter Nellie R drew ahead and outtrotted Manon, only to meet another antagonist, for Vanderlynn came up on the outside with a great flurry, and the two had a lively wrestle for a hundred yards, which ended by Vanderlynn's breaking almost at the score, and the mare beating him under the wire by a head only. Manon third by a length. Time, 2:22½. The knowing ones thought they saw daylight ahead now. If Vanderlynn was going to perform that way he could be depended upon to drive Nellie R for another heat, and pump her out, when Manon would have the race at her mercy. In the pools Manon brought two hundred and twenty dollars, Nellie R one hundred and sixty dollars, Vanderlynn sixty-five dollars.

Second Heat—At the start Vanderlynn rushed off and took the pole and they went to the quarter in a line, Manon second, Nellie last. Down the straight Nellie moved up even with Manon, and at the half, where Vanderlynn broke, she took the head of the procession. She held the vantage to the finish, winning the heat by half a length, Manon second, Vanderlynn a fair third. Time, 2:21½. With two heats to her credit and no sign of a pinch yet, Nellie R got to be an investment much sought after. Quotations were: Nellie two hundred dollars, Manon one hundred and fifty dollars, Vanderlynn seventeen dollars and fifty cents.

Third Heat—Manon led off, but for most of the mile the two mares trotted like a double team, Vanderlynn breaking up on the first turn and acting as rear guard. Near the seven furlong pole Manon went

into the air and Nellie won the heat and race by three lengths, Manor second, Vanderlynn third. Time, 2:21½.

SUMMARY.

AGRICULTURAL PARK COURSE, SACRAMENTO, September 15.—Trotting, free for all. Purse, \$1,200.

Time—First heat—Quarter, 0:38; half, 1:12½; mile, 2:22½. Second heat—Quarter, 0:35½; half, 1:11½; mile, 2:21½. Third heat—Quarter, 0:35; half, 1:10½; mile, 2:21½.

Between the heats of the free-for-all a match between J. B. Haggin's Premium and the Australian horse Kelpie, half a mile, was run. The race was for five hundred dollars a side. Henry Schwartz was selected by the parties to the match as starter, and he sent the horses away with as square and fair a start as the most exacting quarter horse speculator could desire. It was expected that the race would be close, but it proved otherwise. The two ran together around the turn, but as soon as they were straightened in the stretch, the great old mare commenced to leave the Australian, and she came to the winning post first by three lengths. Time, 48½.

SUMMARY.

AGRICULTURAL PARK COURSE, SACRAMENTO, September 15.—Private match for an inside stake of \$1,000. Half a mile.

J. B. Haggin's ch. m. Premium	1
James Morrow's b. h. Kelpie	2

Time—48½.

Trotting was then resumed and some colt controversies were disposed of. In the Occident Stake for three-year olds, all the nominations were withdrawn except Sallie Benton, and she took a walk over for the stakes and declaration money.

In the yearling race only two colts appeared, Cannon Ball and a black filly named by Mr. L. J. Rose. Cannon Ball has been aptly named. He is a resolute little fellow, but slow of motion. He drew the pole and they went away, the black filly leaving the colt at once and doing the mile as she liked, Cannon Ball being beaten over a furlong.

SUMMARY.

AGRICULTURAL PARK COURSE, SACRAMENTO, September 15.—Purse \$300, for yearlings. One mile.

L. J. Rose's blk. f., by Sultan; dam, Ella Lewis	1
W. B. Todhunter's ch. c. Cannon Ball, by Prompter; dam, Gazelle	2

Time—3:06½.

The meeting closed with the trot for the three-minute class. Hazel Kirke, Barney B, Sister, Le Grange, and Scandinavian started with positions in that order. The race was considered to lay between Barney B and Scandinavian, with a chance for Sister or Le Grange to make a scratch, and the pools sold Barney B sixty dollars, Scandinavian forty-five dollars, field eighteen dollars.

First Heat—Barney B had a little the best of the send-off. Sister and Hazel Kirke both broke, and at the quarter Barney B had them well strung out, Le Grange three lengths behind him, Sister and

Hazel Kirke four lengths further back, Scandinavian last. On the backstretch Scandinavian broke badly and at one time was a distance out. At the half La Grange broke and Barney B came home in a jog, Le Grange second, Hazel Kirke third, Sister fourth, and Scandinavian fifth. Time, 2:32. Scandinavian's friends (some of them) were discouraged by his performance in the heat, and transferred their accounts to the favorite. The pools went—Barney B one hundred and sixty dollars, Scandinavian fifty-five dollars, field twenty-two dollars and fifty cents.

Second Heat—Le Grange led around the turn and was first to the quarter, Barney B, Hazel Kirke, Sister, and Scandinavian following in that order. On the backstretch Scandinavian threw a shoe and went up, but soon settled and began closing the gap. In the last quarter Barney B closed with Le Grange and carried him to a break and apparently had the heat secure, when Scandinavian came rushing up on the outside and beat him to the wire by half a length, Le Grange third, Hazel Kirke fourth, and Sister fifth. Time, 2:30. A suspicion found lodgment in the minds of some outsiders, and Scandinavian took a shoot upward in the betting. Scandinavian one hundred dollars, Barney B one hundred dollars, field twenty-two dollars, was the prevailing odds.

Third Heat—Barney B and Scandinavian got away together, but at the quarter Scandinavian broke and Barney B marshaled the procession, Le Grange second, Hazel Kirke third, Scandinavian fourth, and Sister last. They went in a string around the lower turn but bunched up at the head of the stretch and Hazel Kirke came through winning the heat. Barney B crossed the line second, Le Grange third, Scandinavian fourth, and Sister fifth. Donovan, the driver of Scandinavian, complained that Barney B had fouled him and exhibited a broken wheel in evidence. The judges placed the offending horse last. Pools, Scandinavian seventy dollars, Barney B fifty-five dollars, field sixty-seven dollars and fifty cents.

Fourth Heat—Hazel Kirke led off and on the backstretch four were in a bunch with Le Grange three lengths back. At the half Barney B showed in front, but Scandinavian held the edge over any and all the others when given his head and won the heat, Hazel Kirke second, Barney B third, Le Grange fourth, Sister fifth. Time, 2:32½. It was rapidly growing dark and there was no time for further maneuvering. Pools, Scandinavian three hundred and ten dollars, field one hundred and forty dollars.

Fifth Heat—Scandinavian began business at once and the result of the heat was never in doubt, Hazel Kirke finished second, Sister third, Le Grange fourth, and Barney B fifth. Time, 2:33½.

OPENING ADDRESS

OF PRESIDENT FINIGAN, DELIVERED AT THE PAVILION, TUESDAY EVENING,
SEPTEMBER 11, 1883.

DIRECTORS AND MEMBERS OF THE STATE AGRICULTURAL SOCIETY:
This gathering of producers in the temple of agriculture, this magnificent display of the fruits of intelligent industry, dates the beginning of a new era in the progress of agriculture. Henceforth the power and wealth of the State of California is pledged to sustain the mother of all arts, agriculture, and the reinvigorated producers, inspired by new hopes, will strive successfully to lift the grand art to its legitimate place amongst the noblest forms of human industry.

This day agriculture, the basis of all forms of human industry, gathers around it the industrial and fine arts—all the varied fruits of human ingenuity, and pointing to them, says: "Behold, my children." And as agriculture becomes more intelligent and prosperous, still other industries, now unknown, will spring from its loins, until each human being shall be soothed with beneficent influences.

Already do we see some of the grand results of agriculture in this new State. Its cities and towns, its railroads, its manufactories, its commerce, its schools, aye, even its governmental life—all draw their sustenance from agriculture; for without agriculture none of them could exist in permanent and healthy forms.

But, while we eulogize agriculture; while we rejoice in its stupendous achievements, as shown in the varied forms of human industry; while we hopefully predict still grander achievements, we must remember that the whole is an empty display, unless with these we produce true men and women, capable of enjoying all the fruits of agriculture, and of performing all the duties that man owes to man.

Let us speak plainly of these matters, that we may have some worthy outcome from our efforts.

Great, indeed, have been the results of agriculture; great in the enrichment of human life; great in everything; but have the producers gathered these enrichments of human life into their own existence? If they have not, then have they permitted other classes to obtain a mastery that should have belonged primarily to the producers.

We know full well that the farming class is sturdy, manly, vigorous of thought, persistent in action, and, in the main, true to the best interests of the human race; but, as a rule, all other classes have gained more of the grand fruits that pertain to the enrichment of life, and which spring from agriculture, than the farming class.

I shall not criticise farm life for the sake of criticism, but I shall speak of its defects, and consider its grand possibilities, because upon the success of its future improvement and development will depend the social, moral, and political destinies of our people.

In discussing the subject I shall not attempt to depict the defects of farm life in California, but approach the subject by indirection.

Why is it that the farmer's children so eagerly abandon their father's calling? Why do they flock to the towns and cities? Is it because the occupations of the towns and cities are more productive of wealth?

That there are occupations in the towns and cities that produce more wealth than farming no one will deny, but it must be remembered that the wealth produced belongs to the few; that the retention of wealth is exceedingly uncertain; that all but the small minority gain only a bare subsistence, and die without a home of their own. Ninety per cent of the mercantile classes fail in business, while the clerks, mechanics, and telegraph operators labor all their lives to enrich their employers. Uncertainty characterizes every town and city calling, and every successful man represents ten thousand unsuccessful ones. But the farmer is sure of his subsistence. With average industry and intelligence, success belongs to his calling, and, in the long run, farming pays better than any other calling. In the towns and cities the exceptional man meets with eminent success; in the country the average man succeeds in gaining more than enough to supply his wants. From these statements there is no appeal, except to the imagination of the dreamy youth who feeds his hopes with delusions.

The children of the farmer, except the few, do not rush to the towns and cities because they expect to win wealth; or, if they do, they fail to manifest that expectation in their methods of labor.

Besides, the desire for wealth is not the ruling passion of the majority of mankind, however much they may be willing to accept it when it comes. The farmer's children in rushing to towns and cities, never dream of wealth, but they go there, as a rule, with other purposes.

The farmer sometimes imagines that his children abandon the farm for towns and cities because of the supposed fact that life in town and city is less laborious than farm life. If so, they are led by a delusion, and they can realize their dream only by becoming dudes and loafers.

City life is quite as exacting in its demand of toil as the life of the farmer, and the average business man is even more heavily taxed than the farmer. The mechanic, merchant clerk, railroad man, telegraph operator, lawyer, doctor, work more hours, and in most instances; for less pay, than the farmer, while his expenses are much greater.

It is sometimes said, by way of explanation, that town and city life is more elegant, dignified, and aristocratic than that of the farmer, and, therefore, the life of the city is preferred. The statement contains a truth, though the form of it smacks of error.

The real truth is that the farmer's children feel the influence of an age that is quickening human tastes—enlarging human desires. The very atmosphere of the day inspires the young with a desire for beautiful things, a life of refinement, and no power known to man can forcibly expel these tastes when they are once born. Tastes will be gratified at all costs, whether of peace or of safety, and though everything else goes to the wall. It is only the few who can restrain themselves in the gratification of taste, for a purpose, whether of ambition or the love of wealth. If there exists a taste for beautiful

things, exhilarating sights, and social life, it will be gratified, though the old father and mother live alone on the farm. And this is one great reason why the children of the farmer flock to the towns and cities. The age in which they live has given them tastes that are not and cannot be gratified in farm life, as it is too often conducted. In town and city there are attractions of an overwhelming nature in every window, beautiful yard, pretty buildings, in every social gathering, and therefore they abandon the farm and seek the city that they may gratify tastes that have come to them without their asking.

Again, it is said that the farmer's children flock to the towns and cities because of their love of excitement that cannot be had in the country, and this statement is true, though it should be couched in better form.

The statement suggests certain fundamental truths that must be better understood before man can fully comprehend his own nature. Underlying everything else in man is the desire to feel that he is alive—the desire to feel a consciousness of existence. This is man's protest against death, and everything that is allied to it.

One person resorts to study and mental labor, that he may obtain the sense of life that comes from thinking; another resorts to feverish action for the same purpose; others to the theater and the various forms of associated life; and still others resort to intoxicating drink, for no other purpose than to feel the pulsations of life within them. In fact, human beings plunge into any and everything that will impart to them this exhilaration. Call it love of excitement, if you will, but it is nevertheless based upon fundamental laws of human nature.

In the country these opportunities are unfrequent. Life is too tame; and the young, feeling the growing desire for a sense of existence, flee to the towns and cities, and the country is robbed of its best blood.

In these two reasons we find the underlying causes of this exodus from the farm to the towns and cities. The fact is a strain upon the life of our people, and a drain upon agricultural life. Already we feel the bad results.

Farming is undervalued; towns and cities are overpopulated, and crime increases with amazing rapidity.

The time has arrived, fellow-citizens, when this evil must be considered—when the current must be reversed.

Much is being done in the right direction by the economic laws that operate without our consent, and which compel men to flee from towns and cities to the country, because of the increasing difficulty of obtaining subsistence in the former. And this cause will continue to work good results in the future. But the real remedy must be applied with an intelligent purpose by beings who are capable of building up a State.

What is the remedy? The answer is simple: The attractions of the town and city must be transferred to the country; the farming class must create a new condition.

I need not particularize the details. It is enough to say that farm life must be elevated by the arts that beautify the home and its surroundings. Provision must be made for the gratification of refined tastes in the ten thousand little and great things that make up exist-

ence upon the farm. That this can be done, even by farmers with moderate means, is proved by the fact that it has been done.

Social life upon the farm must take a form that will not only gratify the natural desires for social intercourse, but, at the same time, quicken the whole being. The social life of the rural districts must be organized by repeated efforts into forms that will delight and elevate. That the State Grange has done much in this direction will be thankfully admitted by all who love their kind; and it has done enough to prove that still grander results in this direction can be accomplished by the same and other instrumentalities.

But more must be done, if the producing class is to take its proper place as the leading and molding influence of our people.

It is not enough that among our farmers can be found some of the ablest thinkers upon political subjects. A broader range of thought can and must be had. No faculty can be safely neglected. The dwarfed faculty will always wreak its vengeance upon the guilty one. And we have no right to despise any faculty that has been implanted in us by the great Creator. That it exists is enough to command respect. The artistic sense, the poetical gift, the imagination and fancy, the love of exquisite literature, are the outcome of faculties that are as imperative in their claims as the faculty that invents a piece of machinery. The faculties that push man onward to the study of the secrets of nature—the nature of soil, the character of animals—are quite as honorable and as worthy of cultivation as the faculty that teaches how to buy in the cheapest markets and to sell in the dearest. And the obligation to develop all these faculties is as binding upon the farmer as upon the citizen of the city; and the farm life that fails to recognize this truth contains the source of its own decadence.

The mental life of the farm, it must be admitted, is one-sided and warped, and the children see it, and flee from it.

But let me come to some special points; for I speak upon this occasion, not to amuse, but, in so far as it lies in me, to add something to the thought of our people upon these grave subjects.

If there is to be any fundamental change in the mental life of farmers, such a change as will lift them as a class to the place that belongs to them, they must broaden their mental life.

First—The public and private schools must be improved and used. In this there must be no false economy. Competent teachers and abundant apparatus for instruction must be supplied, no matter what the cost. The farmer must have, and ought to have, better schools than the inhabitants of cities and towns.

Second—The schools preparatory to the University, which were outlined by the last Legislature, must be built up. Every child must have an opportunity to pursue the higher education. The many will not do so; but each one must be permitted to take all that he can and will receive. In no other way can a people be lifted into a high mental and social condition. It is useless to say that the bright ones will take care of themselves, for so they will. It is the average mind that is to be cared for, for upon that average mind depends the well-being of a people.

Third—Your State University, manned by the ablest of men, must be used by the farming classes. And why should it not be? It is your University, and it has been fostered by a healthy agricultural

sentiment. You need not fear that your children will become impracticable men; for it is a well known fact that the graduates of our University are practical men—more able than the average man with equal ability to fight successfully the battle of life.

If possible, every farmer's child should attempt to use the University. If they cannot take a full course, they should take a special course, and at the least they should master some one subject.

But above all things, the farmer should take hold of the College of Agriculture, and make it what it ought to be by filling it with students.

They should master the chemistry of agriculture; they should learn how plants feed and grow; they should be taught to comprehend entomology, and possess a knowledge of all the sciences that relate to agriculture, and be prepared to read intelligently all the works that treat of these subjects.

In this way they will obtain a knowledge of the underlying facts of nature, that will make farm life vigorous with exhilarating thought.

The entire nation will be enlarged by such a course, and farm life will become more attractive, more enjoyable, than that of the towns and cities.

Prejudices will be dissipated; the farmers will be brought into deep and enjoyable sympathy with all progressive life; power will be imparted, and the farmer will become the conservator of noble manhood.

This outlook upon the future is invigorating, and gives hope of success in the effort to transfer the attractions of town and city to the life of the country.

In my judgment, we have a right to expect such a development. To what does the invention of labor-saving machinery point? Does it not point to a decrease of drudgery, and therefore to an opportunity for all the forms of human culture? Does not quick transportation, the multiplication of markets, and speedy returns point to the same glorious end?

This State sends more wheat to Europe through her principal port than any other in the Union. Of course, the shipments of New York are larger, but they are the aggregate of the crops of several States, while the wheat that goes out of San Francisco harbor is all raised in this State. Allow me here to give you a few figures to show what California's solid wealth is composed of. Wheat, of course, comes first, and if it was not for the unusual hot wave that passed over some parts of the State in June, our wheat crop would astonish all the old States. We will, however, harvest thirty million bushels—and it can safely be estimated at thirty millions. Barley comes next, and while it suffered from the hot weather, we will have between fourteen million and sixteen million bushels, that will be worth at least thirteen million dollars. Oats—the crop is a good average, and will be worth two million five hundred thousand dollars. Corn crop is good, and can reasonably be estimated at one million dollars. Rye at five hundred thousand dollars. Wool will be a larger clip than last year by from five million to eight million pounds; twelve million dollars will be a small amount for this year's clip. Wine I will estimate low at five million dollars; hops, two million dollars; hogs, two million dollars; canned fruit, two million dollars; raisins, one million dollars; canned fish, one million five hundred thousand dollars;

powder, two million dollars; cattle, six million dollars; horses and mules, one million five hundred thousand dollars; sheep, three million dollars; poultry, one million dollars; butter, one million five hundred thousand dollars; flax, silk, Angora goats, one million dollars; lime, hairs, etc., two million dollars. The California mines this year will produce about seventeen million dollars. This makes a total for agricultural and kindred pursuits of eighty-eight million dollars, and a grand total for all of one hundred and five million dollars, and it is estimated that there is not over one hundred and fifty thousand people engaged in agriculture. This is proof enough of the prosperity of your young State. Let the farmers along the Sacramento and other rivers and navigable streams, see that they are kept clear and fit for navigation, as they are worth more to you than all the railroad commissioners you will have for a long time to come.

The great industry of California will be the growing of fruits. In time every part of the State will be teeming with a dense population; will be dotted with cottages, bowered with trees and vines; with happy homes of small fruit farms, where each member, even the children, will find some easy and pleasant task in cultivating and gathering some beautiful fruit for the consumption of some less favored spot of the world. Of all the beautiful gifts of Pomona, the grape, with its beautiful colors and bunches, will be the most important. Even now, it is assuming large proportions with large investments, and maintaining a considerable population. Without being exact, for such data is not yet obtainable, there are now one hundred thousand acres of grapes planted, which are used for wine and brandy making, for raisin making, and for shipping to eastern cities.

Of this number of vines about one third are as yet only in full or partial bearing, and this year's product from these one hundred million vines, may be estimated to make twelve million gallons of wine and brandy, one hundred and fifty thousand boxes of raisins, besides grapes which are shipped to eastern cities in their natural condition. This product may, at a low estimate, be valued at five million dollars. This is for this year. But the ratio of increase will be very rapid. You take the present planting—one hundred thousand acres—and in four years from now the income from the present planting should be twenty million dollars, and this industry is only in its beginning.

The investments in this industry are getting to be very large. Take one hundred thousand acres of vineyard: at a valuation of three hundred dollars, it makes a total valuation of thirty million dollars. It is a fair estimate to say that the wine cellars, presses, engines, and other machinery and tools, together with packages, etc., will represent fully an equal sum, and it gives a grand total of sixty million dollars invested in the grape and wine industry. It may be taken as a reasonable estimate that this requires the labor of twenty thousand men in the care of the vineyards, cellars, drying houses, etc., and if one man represents five of population, then there are now a population of one hundred thousand people who get a good support from the vine.

Take this estimate, and you find that the income per capita, with the present yet limited income of five million dollars, is two hundred and fifty dollars a year. This, of course, is small, but it must be remembered that they are now yet growing the young plants; that they are creating capital for future income; that in four years this

income will be twenty million dollars, instead of five million dollars, and the labor the same; that then the income of each will be one thousand dollars, instead of two hundred and fifty dollars to-day.

There are fears that this industry will be overdone. What the future will evolve, of course, is only conjecture; but there are certain facts on which we may base an opinion of the future. It is a fact that France, Germany, and other wine producing countries, by reasons of phylloxera and bad seasons, have not produced a half of a crop; whereas their wants are increasing. To fill this void, they are lengthening their short crops by artificial means—by adulteration. This is getting to be well understood, and consumers are beginning to look to other sources for supply. California is stepping out to fill this place, and I think if the people are only true to themselves; if they will guard the purity of their products; if with jealous care they see that no one makes an adulterated product; if they will, by the selections of the best adapted grapes for special purpose, and a special locality, and, with painstaking, make their wine and brandy, they need not fear for the future. They will have the world for a market. There may be temporary and individual hardships or drawbacks, but the end will be prosperity. We have a country where every season is a good season, with very few and comparatively insignificant drawbacks, when compared with other wine producing countries. We have some local short crops, now here, now there; but, as a whole, the song of the Winter is cherry and happy. They plant, they prune, they reap. Maturity of the grape is always perfect, and the average yield satisfactory.

It is possible that I may be misled by an over-sanguine nature. But I fully believe that the near future will witness great improvement in the life and in the art of the agriculturists of California. In fact, we already discern the signs of the coming advancement in the achievements of the past and the desire of the present.

Though a very young State, and thousands of miles from the best markets, we have gathered for daily use the best machinery that the world produces, and to this native ingenuity has added still other inventions of great value. Our farmers have searched the world and obtained the best varieties of fruit trees; and California is now the home of all the standard varieties. Every valuable plant and tree, known to the world, is eagerly sought for by our people, and the finest breeds of domestic animals have been domesticated here.

And no one will deny, for one moment, that California leads all the States in producing running and trotting horses. Professor Marsh, of the Yale Scientific School, tells us that the prehistoric horse was a cumbersome beast, with five toes. Ages were required to produce the hoof; and Professor Brear says that it took four thousand years to produce a three-minute horse. In 1818 Boston Blue made a mile in three minutes. Six years later Top Gallant reached 2:40. After that the record was lowered without a break every three or four years, until in 1859 Flora Temple reached 2:19½; while Dexter followed, 1867, with 2:17½. Goldsmith Maid, in 1874, made 2:14; and Maud S. reached 2:10½ in 1881; while in 1856 there was but one horse in the world that had trotted in 2:25, we had, in 1882, four hundred and ninety-five with that record, an increase of seventy-six over 1881. We have sixty horses with a 2:19 record, although nineteen years ago there was not one in the country. And now California leaps to the front and leads all the States. She has produced the fastest trotting

youngsters; she has made the heaviest investment in their production, and soon she will have a larger number of the fastest horses than any other State. What the next ten years will produce in the way of speed we do not know, but we are quite certain that California will lead the world in the production of fast horses.

In the midst of the proofs of our prosperity, I estimate it is not out of place to introduce a few words of warning. The attention of fruit raisers has been for some time directed towards noxious insects, and, very properly, measures have been adopted, and inspectors appointed, to get rid of those pests. It is to be presumed that they will succeed to the satisfaction of all.

I will now direct your attention to a subject of great interest to all horse raisers or owners and too much neglected till now. I have seen reported numerous cases of glanders and farcy in several counties of the State.

Over three years ago was passed a law concerning those affections; crude and incomplete as it is, we can use it to the general benefit. The application of that law is left in your hands. When you suspect an animal, ascertain what is the matter with it, and enforce the law when proper.

Here, with food in plenty and at moderate rates, we should hardly see a case of it; but that it is, in most cases, introduced on your farms by unscrupulous persons selling what they know is dangerous to animals and people.

Be cautious in trading for suspicious animals, and don't hesitate to ascertain if your neighbor has any doubtful case. The disease has already caused some serious losses in several places, and can be eradicated only by constant vigilance and sweeping measures.

That we have also made great progress in the fine arts, must also be admitted.

In connection with the industrial arts, and in consideration of the magnificent gallery that our Society has erected for the display of pictures, it is proper that I should say something of the fine arts.

Personally, I have always been interested in the progress of the arts in California. Acting for three years as one of the Directors of the San Francisco Art Association, I was brought into intimate relations with our prominent artists, and made familiar with the condition of art on the Pacific Coast. In this department, ladies and gentlemen, I am happy to say that we are not far behind the older portions of our country. It is true we lack the advantage of collections of pictures and statues to stimulate and encourage our artists; but we possess a variety of scenery, from the azure summits of the Sierras to the golden, low-lying valleys of the Coast Range, that presents a diversity in grandeur and beauty that cannot be surpassed in any part of the world.

But it is not particularly in the sense of picture-making that I would call your attention to the subject of fine arts, but rather to their intimate relations with the industrial arts. Beauty and grace are not necessarily attributes of practical utility; but, by the application of artistic laws, even the commonest and homeliest of our utensils may become a pleasure to the eye and an ornament to our homes. Elegance and beauty are the accompaniments of education and refinement; and it is by encouraging art that we shall assert our claim to superior enlightenment.

The first International Exhibition of 1851, in London, opened the

eyes of the English to the superiority of the French and Germans in the application of the laws of design to manufactures. Realizing the absolute necessity of competition, they at once established Art Schools of Design all over the kingdom, with the result that in twenty years' time the industrial designs of Great Britain stood on the same plane with those of Germany and France.

Twelve or fifteen years ago the older cities of the Eastern States began to move in this matter, and now throughout the east art schools have been established. The universities—Harvard, Yale, and others—have added this department to their course of studies, and the graduates of to-day are well posted in the history and theory of art.

I am assured by those engaged in art education, that there is no lack of talent or enthusiasm in the young students of art in our State; but, on the contrary, a widespread interest, with an unusual aptitude for this especial study. Such being the case, it is our duty to do all that is in our power to foster and encourage the study of the fine arts. And to that end we have erected a spacious gallery, where we propose to display, for your pleasure and instruction, year after year, the best works of art that can be procured.

I refer to these successes, because they illustrate the fact that our people possess the energy and intelligence that are necessary in a still grander development of our civilization. And from these improvements I believe we have a grand outlook upon the future.

Ladies and gentlemen, I have spoken to you out of the fullness of my heart of matters that concern us all in the future upbuilding of manhood, art, agriculture, commerce, and the State.

I have sought only to speak of the things that make progress, and, therefore, I have been free to criticise and suggest where I might have dealt only in laudation. I have done so because I have faith in the good sense and intentions of our people, and I now commend these thoughts to your consciences and your best judgment.

To my brethren of the State Agricultural Society, I must give an expression of my thanks for the great honor that you have conferred upon me in electing me President of the State Agricultural Society. You have placed me in a position that is, in my judgment, more honorable than that held by the Governor of this great State. And, so far as in me lies, I shall perform the duties of my high office in a spirit born of this high estimate of its dignity and usefulness.

I thank you, my brethren, for your hearty coöperation. You have not failed to render me all the assistance that was within your power to give, and I know that you will continue to render great assistance without which I will be powerless.

At the close of the address Messrs. Weinstock & Lubin formally presented to the Society four statues. President Finigan, on behalf of the Society, accepted the donation, making the following remarks:

Messrs. Weinstock & Lubin:

GENTLEMEN: You have come to us with gifts in your hands. In doing so you have placed yourselves in harmony with the occasion; for all that you see here are gifts of God and nature. Men have

worked hard to produce these things, but in doing so they have created nothing; they have only changed the form of things. Man's labor, after all, is only a knocking at the door of the treasure house of nature. Man works; God and nature give. As man ascends in the scale of a true civilization, he also learns to give. Barbarism is robbery. True civilization is a form of generous beneficence. As we advance we will become more generous.

And you, gentlemen, will lead a long line of generous givers, who will enter the new temple of agriculture to deposit the tokens of their beneficence; and you will, in after years, be able to rejoice thereat.

In making these gifts you have rendered us a timely service. Hard work and accumulation are grand in their way, provided, always, that they lift us into the domain of thought and honest, wholesome sentiment. Your gifts will help to lift us above the mere sordidness and deadness of labor. These statues will speak to us of some of the sweeter aspects of human toil.

Proserpine will tell of the principle of vegetation, and make us think of great causes.

Ceres, the symbol of corn and tillage, will speak to us of the beneficence of nature working hand in hand with man.

Flora will sing to us of the tenderness of nature as she surrounds us with smiling flowers.

Pomona will tell us of the supreme kindness that enriches man with delightful fruits.

And we may be sure that the young, at least, will hear these voices, and become, on that account, stronger and more lovely in character and life.

Gentlemen, in the name of the State Agricultural Society, I accept your gift; on behalf of the husbandmen of California I return you cordial thanks.

ANNUAL ADDRESS.

THE SPIRIT OF THE AGE AND ITS REQUIREMENTS.

ANNUAL ADDRESS DELIVERED AT THE PAVILION, THURSDAY EVENING, SEPTEMBER 13, 1883, BY HON. IRVING M. SCOTT, OF SAN FRANCISCO.

MR. PRESIDENT AND DIRECTORS, LADIES AND GENTLEMEN: The world has had its golden and silver, its brazen and iron ages; it has also had its fictitious, metaphysical, and positive ages. It is our fortune to live in the positive or scientific, the spirit of which is progress, progress, progress.

Progress is stamped on the brow of every trade, profession, and industry. It is seen in the manifold manufactories of the world, on the broad fields of agriculture, in the rich merchantmen, steam and sail, which infest every sea. We see it in our public schools, the nurseries of civilization and the bulwarks of civil liberty, the adornment of our times, and the incalculable blessing to our race. We see it in the happy homes as numerous as the stars that smile above them—at home, abroad, wherever we go. It is in the age; it is in us and of us—impelling us on.

Agriculture, manufactures, commerce, the trades, and the arts and sciences are so intimately blended that the discussion of any one of them, includes in some degree the discussion of all. My purpose is to discuss agriculture, with respect to the status it has held in the affairs of the world, and with respect to the requirements of the age in which we live. The origin of agriculture precedes all historic record, and its locality is not known. It is quite certain that it did not precede the dawn of civilization. For tilling the soil presupposes a security of rights, beyond the restraints imposed by absolute savage life; it was the offspring of necessity; for a man in savage life is not given to labor, nor to store up wealth in excess of his immediate wants. He turns not to cultivating the field, nor to toil, so long as bountiful nature gives him fruit, seed, nuts, roots, game, and fish upon which to subsist. These failing, he was compelled to supplement the gifts of nature, and to this end his attention was first directed to domesticating the horse, cow, sheep, hog, etc., to use when necessity should require them, and thus he became a shepherd. The next supplementary act was to plant seed, by causing his cattle to tread it into soft ground. When the demand upon his energies became too great, or the soil too obstinate to admit of this primitive method, genius came to his aid and invented the plow—an indispen-

sable implement of a noble industry, glorious emblem of peace and plenty—an instrument mightier in its effects upon the destinies of the world than the sword or scepter. Egyptian hieroglyphics record the use of the plow in the valley of the Nile five thousand years ago. A forked stick, one prong of which, six feet long, was the beam; the other, two feet long, sharpened, was the colter and share. This most antique implement of husbandry has been adopted by all the civilized and semi-civilized nations of the earth, and is still in use in parts of Portugal, Spain, Mexico, and other countries, and for more than fifty centuries has time dragged this crooked stick down the ages. It was improved by being shod with iron, when mankind became sufficiently advanced in mechanics to work metals. The Bible speaks of plows being “shod with socks of iron and brass,” and of the good days “when swords should be beaten into plowshares.” The Greeks used two kinds; one the primitive, and one on wheels. The Romans added a colter and mold-board, and in the decline and fall of the Roman Empire the plow shared the fate of all that went to make up the glories of that once great and proud nation.

Only two centuries have elapsed since improvements were made on its original form and structure. These improvements from time to time have kept pace with the progress of general industry. One of the triumphs of mechanic arts is the successful introduction of steam plowing. This, with the rotary plow, seems destined to revolutionize the system of agriculture. The successful working of these modern appliances, some of which are capable of thoroughly preparing fifty acres a day to a depth unattainable with animal power, is an earnest of what is to come. Who shall doubt that the day is not distant when the steam plow, on prairie, and valleys, and slopes, will till the soil, sow the seed, thrash the crops, clean and sack the grain.

“Truth is stranger than fiction.” If any doubt the probabilities, none can question demonstration. The labors of Hercules are as the efforts of a puny child compared to those of the steam engine. Laden with hundreds of tons of commerce, and conveying palaces filled to repletion with passengers, it leaves behind in the race the swiftest steed as if it were motionless; nor are its triumphs less marked on the sea.

Agriculture long plodding is to be congratulated that the steam engine, the mightiest of friends, most tractable and useful of servants ever vouchsafed to human genius, is now enlisted in her cause and obedient to her will. The ordinary hand-plow seems to be a very simple machine, but it involves principles so abstruse as to require a high order of intellect and profound learning in mechanics to understand and apply them, so that it shall do the most work with the least friction and repairs. Much mechanical skill and ingenuity has been expended on the plow in bringing it to its present state of perfection, and the field is open for yet greater improvements. Let our schools and colleges thoroughly teach their classes the principles involved in the plow in all its forms—hand, gang, rotary, and steam. What has been said of the plow, from its incipency to its most approved pattern, can in general be applied to all the various implements of husbandry, at first so rude and wasteful to labor. It is surprising how tenacious agriculture was in holding on to its clumsy and inefficient machinery. Until the last half century the chief implements of harvesting were the reaping-hook or sickle, the scythe,

cradle, and flail. Notwithstanding, Pliny described a reaping machine in A. D. 23, and Palladius in A. D. 301, both driven by oxen. From that time down—fourteen hundred years—history is silent. A patent for a reaping machine was taken out in England in 1799, which produced no practical results. The first successful reaping or mowing machine was invented and patented by Obed Hussey in 1833—the chief novel device of which consists in a scalloped knife cutting between two fingers. From 1834 to 1872 four thousand and five hundred patents had been obtained for improvements in reaping and mowing devices. In the meantime the number of patents for cultivators, harrows, etc., were legion. Now the mechanics of agriculture is in a high state of perfection, while invention and experience are rapidly producing more useful implements. It is a proud boast, but nevertheless true, that more has been accomplished in the last fifty years in perfecting agricultural machinery than was done in all preceding time; and in no time since history recorded events has progress been so sure of its foothold, so firm in step, and so rapid in stride.

With this review of the mechanics of agriculture, from the earliest periods to the present, let us investigate the social, commercial, and political aspect of the subject: The first word which meets our vision is caste, blazoned in bold relief on the page of history gone by. The ruling classes in all nations ranked the priest above the soldier, and the soldier above the tiller of the soil. A greater fallacy, a greater wrong could not be perpetrated upon any age, people, or government; for, as Liebig justly remarks, "Perfect agriculture is the true foundation of all trade and industry—is the foundation of the riches of states." Greece rose to the highest eminence in the exact sciences, in fine arts, in classic literature, in the arts of war, and in architecture; her temples and public buildings were models of classic taste and beauty. So true to nature were her works of art, that under the touch of the sculptor's chisel the marble was said to "warm into life." For these we honor her. But alas! the tillers of her soil were mostly slaves. The ancient Greek delighted in the glories of war, the allurements of political preferment, the charms of music, but considered agriculture as servile and degrading. Rome, in the days of her republican vigor, sets a brighter example. To every citizen was allotted, first, about two acres, subsequently six acres of land, which he was expected to till by his personal efforts. To Horatius, who kept the bridge so well,

"They gave him of the corn-land
That was of public right,
As much as two strong oxen
Could plow from morn to night."

Her greatest warriors and wisest statesmen felt it an honor to earn their bread by the "sweat of their brow." Cato, distinguished for his lofty patriotism, profound statesmanship, skillful generalship, great learning, and unbending virtue, says: "I come now to the pleasures of husbandry, in which I vastly delight; they are not interrupted by old age, and they seem to me to be pursuits in which a wise man's life should be spent. The earth does not rebel against authority; it never gives back without usury what it receives. The gains of husbandry are not what exclusively commend it; I am charmed with the nature and productive virtues of the soil. In my opinion there can be no happier life; not only because the tillage of

the soil is salutary to us all, but from the pleasures it yields. Nothing can be more profitable, nothing more beautiful, than a well cultivated farm."

These were the proudest and happiest days of Rome, then the greatest nation that had ever existed.

"Then none *was* for a party,
Then all *were* for the State;
Then the great man helped the poor,
And the poor man loved the great.
Then lands were fairly portioned,
Then spoils were fairly sold;
The Romans were like brothers,
In the brave days of old."

Wars of conquest filled the republic with slaves, who superseded freemen in the tillage of the soil; labor became degraded, luxury enervated the richer classes; agriculture drooped, withered, sank into decay, and the decline of Rome began.

Slavery and luxury are associate evils in the economy of a state; it is a question which is the greater evil; slavery degrades, luxury enervates; each is an element of vice and weakness; each is incompatible to healthful and vigorous action, to just and wise law and its impartial administration, and to the development of the higher faculties and nobler aspirations of our being.

To feudalism, a species of slavery which sprang up in the fifteenth century, and which has continued, under some modifications, down to our time, is to be attributed the constant apathy in the minds of the tillers of the soil toward improving the land and the means of cultivation. The tenant at will had no incentive to improve his holding, for by so doing he only increased his rent and not his profit. The feudal system precluded efficient agriculture. Its relics are still a bane to England. The uneasy and restless condition of mind with the masses of the people throughout the British Empire, growing out of the social and legal relations between the owner (virtually feudal lord) and the cultivator of the land, presages that the time is not far distant when this long-suffering and oppressed people will rise as a giant in his might and free themselves. It is an unhealthy condition of affairs in any state when the lands are owned by a few, or when the masses are landless, as they are in the British Empire. The English statesmen see this and acknowledge the evil, recognizing the truth of these lines by Goldsmith:

"Princes and lords may flourish and may fade,
A breath can make them, as a breath has made;
But the bold yeomanry, a country's pride,
Once gone, their place can never be supplied."

It behooves us to profit by the lesson of our transatlantic friends, and not suffer our public domain to be squandered on bold and reckless speculators; but parcel it out to the tiller of the soil, so as to effect the greatest good to the greatest number. By so doing the ends of justice will be attained, and the government strengthened.

The human heart loves its own. Make the tiller of the soil its owner. He will love it, and fight for it to the hilt, because it is his own, a part and parcel of himself. Let government see to it that such only shall enjoy its bounty. The owner of the soil, feeling his interest allied with the best interests of the country, and being a free man,

is naturally a supporter of free labor and free institutions; he is a conservator of freedom.

The farmer, in the comprehensive use of the term—that is, the representative of all the various branches of soil tilling and its concomitants, wool growing and cattle raising—is little subject to the fluctuations and annoyances of speculation and the hazard of adventure, hence leads uniformly a peaceful life, independent of all except his personal care, willing and requited labor, the gentle rains and genial warmth of the sun to quicken the sown seed, invigorate the plant, and ripen the crop. His toil is rewarded with prosperity and a happy home. His children, educated to habits of industry, economy, and temperance in all things, to enjoy the expanse of the country, and breathe the pure air of heaven, grow up in health and vigor of body and mind, and come to adorn society, and honor the State by their intelligence and executive ability. If the lessons of the farm pertain less to the graces than do those of the city, they nevertheless inculcate that which is more substantial and of greater utility.

Webster, whose youth was spent in tilling the soil, frankly admitted that he had not the capacity to dance. He had a higher aim and attained unto it, but great as he was he never outgrew his love for the farm life.

“In ancient times the *Sacred Plow* employed
The kings and awful fathers of mankind!
And some, with whom compared your insect tribes
Are but the beings of a Summer's day,
Have held the scale of empire, ruled the storm
Of Mighty War! then with victorious hand,
Disdaining little delicacies, seized
The plow, and greatly independent, scorned
All the vile stores corruption can bestow.
Ye generous freemen, venerate the plow,
And on your hills and long withdrawing vales,
Let Autumn spread his treasures to the sun,
Luxuriant and unbounded! As the sea
Far through his azure turbulent domain
Your country owns, and from a thousand shores
Wafts all the pomp of life into your ports;
So with superior boon may your rich soil
Exuberant Nature's better blessings pour
O'er every land, the naked nations clothe,
And be the exhaustless granary of a world.”

The history of the United States seems a romance more wonderful than the Arabian Nights, rather than the sober record of events. But a few centuries have elapsed since the Eastern Continent bestowed her highest forms of civilization upon her twin sister of the West. Where once blazed the council fire of the squalid savage, now stands the state house of civilized man. Then the country of our fathers was but a speck upon the surface of the earth; now our country spreads out its ample domain from the Gulf to the Arctic and from the Atlantic to the Pacific—a nation of united sovereigns, fifty million strong, and which at the end of this century will number a hundred million. Agriculture must not only be commensurate with the requirements of this vast population, but must minister, through the aid of commerce, to other people and other nations.

In the last decade the production in the United States has been: Of cereals, from forty-two million tons to eighty-one million tons; of coal, in 1870, thirty-three million tons—in 1880, seventy-one million tons; of iron, in 1872, two million eight hundred thousand tons—

in 1880, four million three hundred thousand tons, while the value of exports in 1872 was two hundred and fifty-four million dollars; during eleven months of 1880-81, it was eight hundred and eighty-four million dollars; of railroads, in 1871, there were fifty-six thousand three hundred miles—in 1880, eighty-seven thousand nine hundred completed, ten thousand in construction, and forty-one thousand projected, sufficient to girdle the earth five and one half times; while manufactures in 1870 amounted to three billion three hundred and sixty million dollars; in 1880, five billion three hundred and seventy million dollars, exclusive of gas, malt, and spirituous liquors and petroleum.

From 1848 to 1881 the gold product of California was one billion one hundred and fifty-five million dollars, which is fully double the entire quantity in circulation in the world prior to Marshall's discovery of gold in 1848. Of this nine hundred million dollars was taken from ancient river beds, the work done amounting to but little more than prospecting. The impetus given to the world by this addition to its circulating medium and standard of exchange has been shared by every branch of industry, and the results consequent upon the gold product of California have been incalculable and have surpassed all our conceptions. It buys and stocks our farms and ranches; it pays for the labor to plant and harvest our crops; it builds our factories, furnishes the raw material, and settles the cost of fabrication; it builds the ships that take away our products and return in exchange the products of every clime. The magnitude of this subject and the present relation of farmer and miner seem to justify the interposition of the Government, which I believe can and will adjust the rights of both without injury to either, "a consummation devoutly to be wished."

From 1870 to 1880 the population of the United States increased eleven million six hundred thousand, which is three million three hundred and fifty thousand greater than during any other decade since the signing of the Declaration of Independence, and seven million greater than the average increase per decade. From 1872 to 1882 there were granted one hundred and thirty-one thousand four hundred and sixty-eight patents for new and useful inventions, and five thousand nine hundred and ninety-seven reissues, showing that genius and science are in concert of action toward perfection in the useful things of life. These statistics furnish useful lessons and problems to us all. Are we able to grapple with and master them?

In view of the progress of the age in the various departments of industry, the written works of science showing how to best utilize the forces and materials of nature, and the certainty that all the tillable lands will ere long be occupied and under cultivation throughout the Union, the duty and position of the American farmer assume a grave aspect. His personal ease may seem to require him no further than to reap what is in sight. This policy will not in the end produce the best results. Cupidity was much chagrined at the result of having killed her hen which laid the golden egg. Already the complaint is heard that the lands of California do not produce as well as formerly; that visible exhaustion and premature old age have come upon them. The vegetable creation, like the animal, must have a full supply of good food to yield its best work. As well attempt to run the steam engine without fuel, as a farm without manure. All nature is subject to the laws of equilibrium. We do but borrow

the product of the land; the debt must be paid, or we lose our credit, and the land becomes bankrupt; the soil demands an equivalent for every pound of grain taken from it. "Coming events cast their shadows before them." It requires not the vision of the seer to perceive that the near future will tax the full capacity of all the tillable lands of California to support their occupants and supply the increasing wants of our manufactures and commerce. England, with her population of forty million, raising but about one half of her requisite cereals, looks to the United States to assist in supplying the deficiency. The overcrowded Orient, with her teeming millions, depends upon the Pacific Slope as her granary. Until recently France supplied the world with wine. The product of her vintage, put into forty-gallon casks of ordinary form and placed end to end, would encircle the globe. To-day the ravages of the phylloxera have so seriously affected this product that the world looks chiefly to California as its future source of supply. The grape here, under intelligent culture, can be made to exceed in quantity the greatest yield of France. To meet these multiform requirements is the mission of the tillers of the soil. A thorough knowledge of the art and science of agriculture in all its varied branches is indispensable to the farmer. To develop from seed and soil the maximum value of useful plants and useful animals at minimum cost, cannot be accomplished unless the farmer shall have a clear and comprehensive understanding of the nature of those materials and agencies which produce the plants and increase his herds. He must be able to determine whether the soil he tills is defective, and how he can best remedy it. He must be able to supply what food the plant lacks, whether ammonia, or a phosphate, or water, or other substance. If water is needed, irrigation must be used; if there is too much water, the land must be drained. It is the province of agricultural chemistry to determine the faults and point out the remedies. It acquaints us with the fittest food for each of the useful plants and useful animals; what plants are exhaustive and what enriching to the soil; how best to resuscitate a soil depleted by the removal of crops, and how to keep it in a healthy condition at minimum cost; what food is best calculated to build up the animal frame, clothe it with muscle, cartilage, nerve, and flesh, for the purposes of fleetness or labor, or for milk and fattening. It acquaints us with the physical conditions of the soil, with respect to the degrees of subdivisions, porosity, dryness, and depth most favorable to the application of fertilizers and to vegetable growth. It acquaints us with the best methods of manufacturing bone and other materials into valuable manures, and with the best means of utilizing the sewerage and refuse of cities, and all matter possessing fertilizing properties. Agricultural chemistry embraces a wide range of natural sciences in its application to vegetable and animal productions; it is one of the useful sciences developed in the last fifty years. Prejudice against innovation has delayed a full enjoyment of the benefits agricultural chemistry is capable of conferring, but "truth is mighty and will prevail." Agricultural chemistry rests upon a firm foundation and ranks among the most useful of modern sciences. It is the farmer's best friend, whose virtues he should fairly understand and cherish.

The world has designated medicine, law, and divinity as the learned professions, but it is fast finding out that it requires full as much talent and severe study to acquire a proficiency in the art and science

of farming as to acquire a knowledge of the distinguished professions. Tyndall says "the discoveries and generalizations of modern science constitute a poem more sublime than has ever yet been addressed to the imagination. The natural philosopher of to-day may dwell amid conceptions which beggar those of Milton." Modern science, based upon actual experiment, speaks whereof it knows. The science of agriculture consists of useful knowledge derived by experiment and by practice on a large scale. By means of it will depend the development of the resources of California to their fullest extent—to perfection.

Quoting again Liebig: "Perfect agriculture is the true foundation of all trade and industry—is the foundation of the riches of states." It is the highest duty of the individual and of the state, to gather, foster, and propagate this science capable of conferring blessings so great and multifarious. How is it to be done?

Bacon, on proficiency and advancement of learning, says: "As water, whether it be the dew of heaven or the springs of the earth, doth scatter and lose itself in the ground, except it be collected in some receptacle where it may by union comfort and sustain itself, and for that cause the industry of man hath made and framed spring-heads, conduits, cisterns, and pools, which men have been accustomed likewise to beautify and adorn with accomplishments of magnificence of state, as well as of use and necessity, so this most excellent liquid of knowledge, whether it descends from divine inspiration or springs from human sense, would soon perish and vanish to oblivion, if it were not preserved in books, traditions, conferences, and places appointed, as universities, colleges, and schools, for the receipt and comforting of the same."

California, appreciating the transcendent value of this most "excellent liquid of knowledge," founded by the aid of the Act of Congress of 1862, the University of California, of which the College of Agriculture, by the expressed provisions of said Act, was to constitute the most important feature. This university is situated in one of the most healthy localities in the State, with ample grounds, tastefully laid out and skillfully cared for; its buildings are substantial and adapted to the purpose for which they were designed; its scientific apparatus is in keeping with the most advanced state of learning; its collection of specimens in the various departments of science are choice and extensive; its officers, professors, and tutors compare favorably with those of other universities. And to this summary is to be appended, tuition free! The doors of this university stand wide open, inviting the sons and daughters of California to enter and partake of its bounteous blessings. The learned professors and their associates are in readiness to cordially greet them, and to lead them by pleasant paths into the rich and beautiful fields of science and art, and to assist them in gathering freely therein the abundant gems of knowledge which increase in usefulness and brilliancy the more they are worn.

"Our fortune rolls as from a smooth descent,
And from a first impression takes the bent;
But if unseized, she glides away like wind,
And leaves repenting folly far behind!"

In consideration of these advantages, and the ability of our farmers generally to give their sons and daughters a collegiate education, it

is a matter of surprise that so few avail themselves of the proffered boon; and especially is it a matter of surprise that of the scanty number of students from the farm so small a proportion study agriculture as a profession—for it certainly offers inducements to the aspiring youth not surpassed by any other occupation in life. Besides, "man is but what he knoweth."

It is a fact established in modern science, that force as a quantity is constant, but is subject to change of form. Now, he who changes in a fair proportion the form of force existing in wheat, grapes, pumpkins, and other products of the soil; in cattle, horses, sheep, and goats, into the form of brain force or useful knowledge, is a benefactor, not only to his offspring and himself, but also to the public. The progress of the age demands these changes in force forms—demands earnest scientific work in all the departments of industry, especially in that of agricultural chemistry. The machinery of agriculture has attained a high degree of perfection, and it is a great error that agricultural chemistry should be confined within such narrow limits and be so little applied in practice. The impression is too common among most classes that a collegiate education, instead of fitting one better to perform the duties of life, fills him with self-conceit, chimeras, and impracticable notions. This fault, if existing at all, is not in collegiate education, but is inherent in the individual who, inflated with the idea that he is a genius, mistakes the glitter of polished brass for the more subdued luster of pure gold; or who, like Ixion, lacking a proper appreciation of his own abilities, allows his presumption and indiscretions to mistake a cloud for Juno. When he shall have completed a few turns upon the fiery wheel, he will be a wiser and a better man, and a more useful member of the community than he would be without education. It is by education that we more fully appreciate how little we know and how much there is to be known. The "Prince of Philosophers," when eighty-four years of age, remarked: "I do not know what I may appear to the world, but to myself I seem to have been only like a boy playing on the sea shore, and diverting myself in now and then finding a smoother pebble or prettier shell than ordinary, while the great ocean of truth lay all undiscovered before me."

Education not only inspires modesty in the mind of its possessor, but sharpens, strengthens, and disciplines the mental faculties for concert of action under the direction of the will; also matures the judgment, so that it is better enabled to counsel the will aright. Education ennobles the mind, and impresses upon it that all honest occupations are honorable; that in labor, however humble, is de-throned true dignity. Michael Angelo said "every block of stone contained an imprisoned angel, awaiting some one to set it at liberty." The educated man, fortified by consciousness of right, rises above all petty conceptions of what might seem menial labor. What matters it if he gathers rags on the streets; so long as it is honest labor, it is honorable. The gold for which he sells his rags is as pure and valuable as the gold which buys the rarest gems that adorn a diadem; perchance the rags are of greater intrinsic value than the gem, for by labor they reappear in the form of paper, to whose fidelity is intrusted most of the business relations of life—billions of wealth, the treasures of art and of science, the records of events, the expressions of our innermost thoughts, and the inspirations of divine wisdom and of goodness. As the sturdy oak is developed from the acorn, the lofty

pine and mammoth sequoia from diminutive seed, so the various useful industries, however huge their present proportions, have been developed from small beginnings. Others of like character will spring up, flourish, and perchance exceed in magnificence any now in operation. The educated have an immense advantage over the uneducated in comprehending an industry in its length and breadth, in its minutiae entirety, and are most likely to attain success. But education alone is insufficient to secure satisfactory results in any undertaking; there must be native talent at the foundation. A good watch spring cannot be made out of lead, however much it may be hammered, rolled, and polished; neither can an efficient workman in any profession be made out of dull and inelastic material.

The achievements of success are attained, for the most part, by those who understand the relations of things, and hence seldom err in their deductions from any given state of facts. In isolated cases blind fortune may make millionaires of beggars, or beggars of millionaires, but in general man is the arbiter of his own fate. Possessing fair abilities, he, by observation and close study of science and art, is enabled to utilize the forces and materials of nature so as to secure maximum results at minimum cost. Then, and not till then, is he truly practical—a term too often sadly abused by being employed for purposes akin to that of *Æsop's lion's skin*; but the fiat of nature has gone forth, "*The fittest survive.*" Lions' skins will not avail their wearers in these days of enlightenment. Different avocations require different orders of talent and culture, and as the kind and fineness of a metal contained in a mineral mass are most readily determined by crucial or cupel tests, so the kind and quality of talent of our sons and daughters are best demonstrated by systematic study; according to the kind, quality, and quantity of the talent metal they shall yield, will they be estimated in the treasures of the world.

The talent of the child is not due to his birthplace, nor to the profession of his parents. The farmer's son by talent may be best adapted to the practice of law, or of medicine, or of divinity, or of mechanics; or the son of the mechanic, lawyer, divine, or doctor may be best fitted by nature to pursue some other profession than that of his parents. Let every legitimate means be exhausted to ascertain the character of the talent with which he is endowed; then cultivate it faithfully. Let not ambition or false pride thwart the plan of nature or will of heaven. For "*vaulting ambition which overleaps itself, falls on the other side.*" If he develops a talent and taste to be a blacksmith, woodworker, or useful mechanic of any sort, or a farmer, let him be blacksmith, wheelwright, or farmer, and bid him Godspeed. For they are all the noble sons of honest labor, largely the bone and sinew, nerve, life-blood, mind, and soul of all that is most useful, beautiful, grand, and glorious on earth. By their efforts we subsist, the granaries of the world are filled, cottages, palaces, temples of learning and worship, vast cities, are all the work of their hands; the necessities and luxuries of life are the fruits of their toil, the vast navies and merchantmen are the works of their design and skill.

Ye mothers and fathers, throw false ambition and false pride to the shades. Give to your sons and daughters trades and professions fitted to their talents and capacities, and marshal them as live, energetic workers in the grand army of progress.

The University of California is designed and qualified to solve this most important problem of adaptability with respect to talent, trade, and profession; it is a miniature of the world, where the affinity of mind for those sciences and arts involved in any special occupation are determined with facility. It is a noted saying of Aristotle, "that the nature of everything is best seen in its smallest parts." According to the taste or natural bent of the student's mind will be his inquiries and proficiency in the various branches of learning.

"There's a divinity that shapes our ends,
Rough-hew them how we will."

Let these natural proclivities be carefully noted by the professors and tutors and be made known to parent or guardian of the student, for upon these determinations and the judicious actions thereon, will, in a great measure, depend the student's success in life.

The field of the arts and sciences embraced and cultivated in the University of California is extensive. May it be enlarged and improved till none shall surpass it in extent, fertility, and beauty under the canopy of heaven. Let the individual, the State, and the General Government unite their energies for the accomplishment of this superbly grand and noble object.

"Knowledge is power." Knowledge is the directive agency by which order is brought out of chaos. The first visible manifestation of the power, wisdom, and goodness of knowledge was in its fiat and execution thereof, "Let there be light, and there was light." Now, as by this physical light we are enabled to see physical objects, from the most minute to the most sublime; so by the more subtle light of knowledge we are enabled to perceive the more occult truths of nature and nature's laws. A star of the firmament is radiant with utility and beauty; it guides the shepherd with his flocks upon the hills, and the mariner in his course upon the deep. To the child it seems a delightful toy, while to the philosopher it is known to be the center of a system of worlds. A constellation beaming with the splendors of many stars is proportionately admired for its usefulness and grandeur. But the firmament replete with stars and constellations of stars, blending their beauties and splendors into a unity of light, is sublimely glorious. So a truth of science is radiant with utility and beauty. It is a light in the obscurity of philosophy to guide us aright. The child sees but the inviting fruit in its fall from the tree, while Newton perceives and grasps the law of its descent, and places it as a glowing truth in the firmament of science, to light thence on all coming time. So a constellation of many truths, circumscribed by nominal bounds, as the science of mathematics, of mechanics, of chemistry, of geology, of physics, etc., commands our admiration in proportion to the volume and intensity of its light for all the purposes of our being. And so in the firmament of science, as in that of the heavens, its truths and its constellations of truths, discovered and determined, blend all their lights into a glorious unity of light for the perfecting of the world's happiness and good. This oneness of knowledge in the arts and sciences exists not only in theory but in practice; not only in our universities of learning, but in all the occupations and relations of life.

But while the stars shine brightest the world sees but darkly. The stellar scene of the firmament merges into that of still higher forms of

usefulness and beauty, as dewy morn ascending the east, suffuses the earth and skies with rosy light, and betokens the coming of the ineffable glories of perfect day. So knowledge in the arts and sciences sees but darkly; yet is so far advanced as to perceive the morning tints of the perfect light of coming day. This is cause of most cordial congratulation to all whose aspirations delight in noble and more exalted achievements—in progress. For there is no higher degree of happiness known to mortal than is afforded by a consciousness of continual progress towards perfection in all that is good.

The designated bounds of a specialty are nominal—not real. A specialty is but a fuller development of some peculiar property of one or more elements of a whole. The agricultural, mechanical, and commercial industries, the arts, trades, and professions so run into each other by insensible gradations; are so blended that each is a component part of each of the others, is devoid of absolute identity, or like heat, light, motion, and electricity, each is the cause, and each is the effect of the other's existence. Thus, were the industry of mechanics set up for itself, it would fall for the want of agriculture to supply it with food; of commerce to furnish material for its wares; of the arts, sciences, and trades to produce its chemicals to design, proportion, and draw, and fashion its works; and of the professions to protect its legal rights to care for its sick and to minister to its craftsmen for their moral and spiritual good. Nor could agriculture, nor commerce, nor any other occupation, setting up for itself, succeed better without the coöperation of the various other industries, trades, and professions. The only elements foreign to progress are ignorance and idleness.

As the innumerable colors from the retiring tint of violet to the most aggressive hue of red, whether seen in the painted flower that lures the bee; or in the divers and diverse flowers of nature's studio; or in the rich fields of verdure, and in the fields of purple and golden harvest; or in the foliage of the forest; or in the bloom of health and beauty on the cheek of youth; or in the subdued luster of gold; or in the divine fire of the intelligent eye; or in the glorious stars and stripes that wave over and protect us; or "in the bow of promise of the cloud," are all contained in every pencil of light of the sun, so all the arts, sciences, and occupations developed in proper proportion, and to the full extent of their energies, are contained in every pencil of progress.

Farmers of California! Sovereign peers of a peerless Republic! Are ye for progress? The magnitude of your calling, the responsibilities of your present, and the possibilities of your future, demand it. The spirit and the requirements of the age demand it.

RAINFALL AND WEATHER REVIEW.

FROM SEPTEMBER 1, 1849, TO JANUARY 31, 1884.

By JAMES A. BARWICK, Observer Sergeant Signal Corps U. S. A., in charge of the U. S. Signal Office in Sacramento, California.

RAINFALL FOR THE WINTER SEASONS.

The following tabulated statement shows the rainfall and number of days that rain fell for each Winter month; also, the total rainfall and total number of days that rain fell during the entire Winter seasons; the Winter seasons beginning with the Winter of 1852-3, and ending with the Winter of 1882-3. The three Winter months composing the Winter season that gave the heaviest rainfall was during the Winter of 1861-2: 27.94 inches. The driest Winter was that of 1863-4: 3.08 inches. The mean average rainfall for the Winter season, for the past thirty-one years, was 11.489 inches. We might judge from this that we should never have a Winter season of over twenty-eight inches, or one of less than three inches rainfall:

WINTER OF—	DECEMBER.		JANUARY.		FEBRUARY.		Total for Winter Months.	Total No. Days for Winter.
	Inches.	No. of Days.	Inches.	No. of Days.	Inches.	No. of Days.		
1852-3	13.41	20	3.00	12	2.00	6	18.41	38
1853-4	1.54	4	3.25	6	8.50	14	13.29	24
1854-5	1.15	8	2.67	15	3.46	7	7.28	30
1855-6	2.00	13	4.92	16	.69	6	7.61	35
1856-7	2.40	13	1.38	14	4.80	17	8.58	44
1857-8	2.63	13	2.44	21	2.46	13	7.53	47
1858-9	4.34	17	.96	19	3.91	18	9.21	54
1859-60	1.83	17	2.31	15	.93	14	5.09	46
1860-1	4.28	20	2.67	10	2.92	9	9.87	39
1861-2	8.64	22	15.04	20	4.26	11	27.94	53

MEAN SPRING RAINFALL.

The table below will be found to contain the record of rainfall and number of days rain fell during the Spring months and for the Spring season. It informs us that the wettest Spring season was that of 1880—16.66 inches; and the driest was that of 1857—.68 of an inch; the mean average for thirty-one years being 5.128 inches, showing a deficiency of nearly 5 inches in the dry season of 1857, and an excess of 11.532 inches during the wet Spring of 1880, as compared with a thirty-one years average:

SPRING OF—	MARCH.		APRIL.		MAY.		Total for Spring Months.	Total No. Days for Spring.

MEAN SUMMER RAINFALL.

In the recorded statement below will be found the rainfall for each month of our dry or Summer season ; also the total for the season, as well as the total number of days, etc., that rain fell. The average for the thirty-one years past is .128 of an inch. The Summer season that gives the most rainfall was that of 1861—.68 of an inch. But five seasons of the thirty-one gave none, those being 1859, 1863, 1867, 1878, and 1883:

SUMMER OF—	JUNE.		JULY.		AUGUST.		Total for Summer Months.	Total No. Days for Summer.

MEAN AUTUMNAL RAINFALL.

The table following shows the seasonal rainfall by months and total for the season, both of rainfall and number of days rain fell, for the last thirty-one years, the wettest being the Fall season of 1864, 6.84 inches; the driest being that of 1880—.05 of an inch:

FALL OF—	SEPTEMBER.		OCTOBER.		NOVEMBER.		Total for Autumn Months.	Total No. Days for Autumn.

YEARLY AND SEASONAL RAINFALL, ETC.

The instructive tabulated information below gives the rainfall annually—that is, from January to December of each year—for thirty-one years. Also, the rainfall by seasons, beginning with September 1st of one year and ending with August 31st of the next year, the wettest season being 1861-2—35.56 inches; the driest that of 1863-4—7.86 inches; the wettest calendar year being 1880—31.99 inches; the driest being 1877—8.43 inches; the mean average seasonal rainfall for thirty years being 18.958 inches; the mean average for the year, or the mean annual average, being 18.978 inches. The difference between the mean average rainfall, calculating from January 1st to December 31st of each year, and from September 1st of one year to August 31st of next year, is only .020 of an inch in favor of the calendar year:

YEAR OF—	Yearly Rainfall.	Total No. of Days Rain Fell.	Season of—	Rainfall—Inches.	Total No. of Days.
1853	19.99	51			
1854	19.83	62	1853-54	20.06	51

† Mean for thirty seasons.

RAINFALL AT SACRAMENTO FOR THIRTY-FOUR YEARS.

The following important table of rainfall at Sacramento, from September, 1849, to January 31, 1884, has been in the main published heretofore, but is now extended by Sergeant Barwick, United States Signal Corps, to include to January 31, 1884, thus covering a period of thirty-four years and five months. Sergeant Barwick collated the table from the records of Dr. T. M. Logan, Dr. F. W. Hatch, and those of the United States Signal Service office. The table, it will be observed, gives totals for each month of the year, for each season, and for all of the several calendar months during the entire period. The mean is also given for all the calendar months, the years, and the seasons. The table should therefore be kept by those interested in the subject as a valuable and convenient reference, and far the most complete of anything published:

Year	January	February	March	April	May	June	July	August	September	October	November	December	Total for year	Season of	Inches
1849									.25	1.50	2.25	12.50		1849-50	36.00

† Up to and including February 29, 1884.

SUMMARY FOR RAIN TABLE.

The following is the summary for the past thirty-five years, and thirty-four seasons: Heaviest yearly rainfall, 31.99 inches, in 1880; heaviest seasonal rainfall, 36 inches, in 1849-50; smallest yearly rainfall, 8.44 inches, in 1877; smallest seasonal rainfall, 7.87 inches, in 1850-51; greatest number of days rain fell in one year, 99, in 1858; greatest number of days rain fell in one seasonal year, 101, in 1859-60; least number of days rain fell in one year, 46, in 1883; least number of days rain fell in one seasonal year, 51, in 1853-4.

MEAN WINTER TEMPERATURE.

The tabulated statement below shows the mean temperature by months, and for the season also, of the Winter seasons, beginning with the season of 1853-4 and ending with the one of 1882-3; also showing a mean average for thirty years. Judging from the temperature for each season, we must conclude that the season of 1882-3 was the coldest—45.4°, the warmest being the season of 1881—51.0°; the mean average of thirty years being 48.2°:

WINTER SEASON OF—	Mean Temp.— December.	Mean Temp.— January.	Mean Temp.— February.	Mean Winter Temperature.
1853-4	48.0	43.0	51.0	47.3
1854-5	47.9	43.7	52.5	48.0
1855-6	46.0	48.0	52.6	48.9
1856-7	43.9	48.5	50.2	47.5
1857-8	47.4	45.0	52.2	48.2
1858-9	44.5	44.9	50.5	46.6
1859-60	43.5	46.2	49.8	46.5
1860-1	49.3	47.1	52.2	49.5

1882-3	48.2	41.9	46.0	45.4
Mean	47.1	47.0	50.6	48.2

MEAN SPRING TEMPERATURE.

The table below will be found to contain the mean temperature by months for the Spring, also for the season. The warmest one, as indicated by its mean temperature, was 1853—62.9°; the coldest, 1880—55.0°; the mean average Spring temperature being 59.5°.

SPRING SEASON OF—	Mean Temp.— March.	Mean Temp.— April.	Mean Temp.— May.	Mean Spring Temperature.
1853.....	59.8	61.0	68.0	62.9
1854.....	53.0	60.0	62.0	58.3
1855.....	54.8	58.1	60.2	57.7
1856.....	57.0	58.8	63.9	59.9

Mean.....	54.9	59.3	64.2	59.5

MEAN SUMMER TEMPERATURE.

The mean temperature in the following table is for the Summer months and for the Summer season, showing by their mean temperature that 1866 was the warmest—74.8°; and the coldest to have been 1880—69.1°; the mean average for thirty-one years is 71.8°; the season of 1866 being 3° above the mean average, and 1880 being 2.7° below the mean average for the past thirty-one years. It also appears that the mean average temperature for the past thirty-one years for June, July, and August was in the seventies, which gives us to understand that the three Summer months are usually of even degrees of temperature, with July a little the warmest of the three:

SUMMER SEASON OF—	Mean Temp.— June.	Mean Temp.— July.	Mean Temp.— August.	Mean Summer Temperature.
1853	77.0	75.0	71.0	74.3
1854	67.0	80.6	69.5	72.4
1855	71.1	72.5	73.0	72.2
1856	71.1	75.1	69.6	71.9
1857	71.9	71.4	71.3	71.5
1858	69.4	70.8	70.6	70.3
1859	74.8	69.1	67.2	70.4
1860	65.6	73.2	73.5	70.8
1861	66.2	73.6	69.7	69.8
1862	69.3	73.2	75.0	72.5
1863	69.1	75.6	70.7	71.8
1864	71.1	74.8	74.7	73.5
1865	73.5	74.0	71.7	73.1
1866	72.2	76.2	76.0	74.8
1867	70.3	73.7	71.7	71.9
1868	69.5	73.8	71.2	71.5
1869	70.8	74.3	71.3	72.2
1870	69.3	71.8	72.6	71.2
1871	70.1	70.2	72.0	70.8
1872	69.2	71.4	73.1	71.6
1873	71.7	73.2	66.3	70.4
1874	70.2	72.8	70.9	71.3
1875	70.6	73.3	72.5	72.1
1876	76.9	74.0	72.8	74.6

1880	66.6	70.9	69.7	69.1
1881	66.0	71.1	68.2	68.5
1882	68.1	73.4	71.9	71.1
1883	72.6	73.1	71.4	72.4
Mean	70.5	73.3	71.6	71.8

MEAN AUTUMN TEMPERATURE.

The mean temperature for the Fall season indicates the Fall of 1853 as being the warmest, it being 69.0° ; that of 1881 was the coldest, judging from the mean temperature, it being 58.5° . The average mean temperature for thirty-one years past being 61.6° , showing the average of 1853 to have been 7.4° above the mean average, and that of 1881 to have been 3.1° below the mean average temperature for the past thirty-one years:

FALL SEASON OF—	Mean Temp.— September.	Mean Temp.— October.	Mean Temp.— November.	Mean Autumn Temperature.
1853.....	76.0	78.0	53.0	69.0
1854.....	65.0	60.0	55.0	60.0

MEAN ANNUAL AND SEASONAL TEMPERATURES.

The statement below shows the mean temperature, for each year, for thirty-one years, and for the Spring, Summer, and Autumn, for the past thirty-one years, and the mean Winter temperature for thirty years. The coldest year, inferring from the mean temperature, was that of 1880—57.7°; the warmest was 1864—62.8°; the mean average for the past thirty-one years being 60.3°, showing the coldest to have been 2.6° below the mean average, while the warmest year being that of 1864, when it was 2.5° above the mean average for thirty-one years. By careful study of the following table, one is struck by the slight difference between the coldest and warmest year, as compared with a thirty-one years average, generally not more than 3°. That is, we might safely say that the mean temperature of any year is not likely to vary more than 3° from 60°, either way, between the hottest and coldest year, as compared with the mean average temperature for the past thirty-one years:

YEAR.	Mean Annual Temperature.	Mean Spring Temperature.	Mean Summer Temperature.	Mean Autumn Temperature.	Mean Winter Temperature.
1853.....	62.6	62.9	74.3	69.0	*.....
1854.....	59.5	58.3	72.4	60.0	47.3

* The Winter tables are for the Winters from 1852-3 to 1882-3, both inclusive.

† Mean for thirty-one years.

‡ Mean for thirty years.

The following table gives the mean annual barometer, thermometer, and hygrometer, the maximum and minimum temperature. The hygrometrical observations is the amount of moisture or relative humidity contained in the atmosphere, also the mean average for six years:

YEAR.	Mean Annual Barometer.	Mean Annual Relative Humidity.	Mean Annual Temperature.	Max. Yearly Temperature.	Min. Yearly Temperature.
1878 -----	29.946	62.2	61.3	100.5—Aug.	23.5—Dec.
1879 -----	29.998	65.7	60.3	103.0—Aug.	25.0—Dec.
1880 -----	30.025	64.6	57.7	98.0—July	25.0—Jan.
1881 -----	30.026	66.7	59.2	98.6—July	31.9—Dec.
1882 -----	30.030	66.0	58.2	99.8—Aug.	27.0—Dec.
1883 -----	30.034	69.0	58.8	103.5—July	22.0 { Jan. Feb.
Mean average for 6 years.	30.005	65.04	59.32	*103.5—1883	†22.0—1883

* Highest in six years.

† Lowest in six years.

The Winter tables following this statement show the mean Winter pressure, temperature, and relative humidity, the highest and lowest temperature for the Winter seasons of 1877-8 to 1882-3, and the mean average for six years:

WINTER OF—	Mean Winter Barometer.	Mean Winter Relative Humidity.	Mean Winter Temperature.	Max. Winter Temperature.	Min. Winter Temperature.
1877-78 -----	30.004	77.1	49.9	67.0—Dec.	27.0—Jan.
1878-79 -----	30.120	68.3	49.2	73.5—Feb.	23.5—Dec.
1879-80 -----	30.163	77.2	44.5	64.0—Feb.	25.0 { Dec. Jan.
1880-81 -----	30.116	84.0	51.0	67.0—Feb.	35.0—Jan.
1881-82 -----	30.169	76.4	45.9	62.8—Feb.	29.0—Dec.
1882-83 -----	30.189	77.9	45.4	71.7—Feb.	22.0 { Jan. Feb.
Mean average for 6 years.	30.114	76.6	48.1	*73.5, 1878-9	†22.0, 1882-3

The mean Spring pressure, relative humidity and temperature, the maximum and minimum Spring temperature, also the mean average for six years past, will be found as follows, viz.:

SPRING OF—	Mean Spring Barometer.	Mean Spring Relative Humidity.	Mean Spring Temperature.	Max. Spring Temperature.	Min. Spring Temperature.
1878 -----	29.936	67.1	60.5	91.0—May	40.0—March
1879 -----	30.046	68.4	59.3	91.0—May	38.0—March
1880 -----	30.061	66.2	55.0	86.0—May	29.0—March
1881 -----	30.006	68.4	60.4	88.8—May	37.0—March
1882 -----	30.037	61.9	57.6	94.6—May	34.1—March
1883 -----	30.009	68.9	58.5	98.0—May	39.8—April
Mean average for 6 years.	30.016	66.8	58.5	*98.0—1883	†29.0—1880

* Highest temperature in six years.

† Lowest temperature in six years.

The tabulated statement following indicates the mean Summer pressure, relative humidity and temperature, the maximum and minimum Summer temperature, and the mean average for six years:

SUMMER OF—	Mean Summer Barometer.	Mean Summer Rel. Humidity.	Mean Summer Temperature.	Max. Summer Temperature.	Min. Summer Temperature.
1878 -----	29.817	54.7	72.9	100.5—Aug.	49.0—June
1879 -----	29.821	52.7	72.9	103.0—Aug.	51.0—July
1880 -----	29.880	59.3	69.1	98.0—July	49.0—Aug.
1881 -----	29.903	56.3	68.5	98.6—July	48.0—June
1882 -----	29.898	57.0	71.1	99.8—Aug.	51.2—June
1883 -----	29.908	58.4	72.4	103.5—July	49.8—June
Mean average for 6 years.	29.871	56.4	71.2	*103.5—1883	†48.0—1881

* Highest temperature in six years.

† Lowest temperature in six years.

The following table shows the mean Autumn pressure, relative humidity and temperature, the maximum and minimum Fall temperature, and the mean averages for the past seven years:

FALL OF—	Mean Fall Barometer.	Mean Fall Rel. Humidity.	Mean Fall Temperature.	Max. Fall Temperature.	Min. Fall Temperature.
1877 -----	29.973	54.3	63.4	88.0—Sept.	37.0—Nov.

1882 -----	30.024	69.6	58.8	99.6—Sept.	34.0—Nov.
1883 -----	30.011	68.8	60.1	101.0—Sept.	29.0—Nov.
Mean average for 7 years.	30.008	60.8	60.6	*101.0—1883	†27.0—1880.

* Highest temperature in six years.

† Lowest temperature in six years.

The table following will be found to contain the mean direction of the wind, the total velocity, the rainfall, and the clear, fair, and cloudy days; also, days rain fell during the Winter months from 1877-8 to 1882-3:

WINTER OF—	M'n Winter Direction.	Velocity for Winter.	Rainfall for Winter.	Clear Days.	Fair Days.	Cloudy Days.	Days Rain Fell.
1877-78 -----	S.E.	13.452	18.74	26	28	36	39
1878-79 -----	N.	12.650	7.53	44	31	15	23
1879-80 -----	S.E.	13.735	6.88	39	17	35	29
1880-81 -----	S.E.	16.092	23.01	14	26	50	43
1881-82 -----	N.	14.611	7.56	46	26	18	25
1882-83 -----	S.E.	11.131	4.47	52	30	8	15
Mean av. 6 ys.	S.E.	13.612	11.36	36.8	26.3	27.0	29.0

The mean direction of the wind, total velocity, the rainfall, and number of clear, fair, and cloudy days, also, number of days rain fell during the Spring season, from 1878 to 1883, will be found in the following tabulated statement:

SPRING OF—	Mean Spring Direction.	Velocity for Spring.	Rainfall for Spring.	Clear Days.	Fair Days.	Cloudy Days.	Days Rain Fell.
1878-----	S.	13.962	4.33	45	28	19	21
1879-----	S.E.	14.530	8.84	39	34	19	31
1880-----	S.E.	19.653	16.66	49	24	19	25
1881-----	S.	14.966	3.01	60	22	10	12
1882-----	N.	17.774	6.12	57	19	16	19
1883-----	S.	15.825	7.22	54	26	12	21
Average for 6 years -----	S.	16.118	7.70	50.6	25.5	15.8	21.5

The statistics following will be found to contain the mean direction of the wind, total velocity, the rainfall, the number of clear, fair, and cloudy days, also, the number of days rain fell for the Summer season, from 1878 to 1883:

SUMMER OF—	Mean Summer Direction.	Velocity for Summer.	Rainfall for Summer.	Clear Days.	Fair Days.	Cloudy Days.	Days Rain Fell.
1878-----	S.	13.303	-----	83	9	-----	-----
1879-----	S.	13.645	.13	81	11	-----	3
1880-----	S.	16.066	Sprinkle	85	7	-----	2
1881-----	S.	16.531	.50	86	5	1	3
1882-----	S.	15.449	.10	87	4	1	3
1883-----	S.	15.609	None	89	3	-----	-----
Average for 6 years -----	S.	15.100	0.12	85.2	6.5	0.3	1.2

The mean direction of the wind ; the total velocity ; the rainfall, and number of clear, fair, and cloudy days ; also, the number of days rain fell for the Fall season from 1878 to 1883, will be found recorded in the following table:

FALL OF—	Mean Fall Direction.	Velocity for Fall.	Rainfall for Fall.	Clear Days.	Fair Days.	Cloudy Days.	Days Rain fell.
1878-----	N.	11.269	1.35	71	16	4	7
1879-----	S.	10.492	2.93	59	20	12	12
1880-----	N.	11.518	.05	71	14	6	2
1881-----	N.	12.993	2.73	73	15	3	11
1882-----	N.W.	12.213	6.42	61	22	8	15
1883-----	S.	10.771	2.48	67	18	6	11
Mean average for 6 years--	N.	11.543	2.66	67.0	17.5	6.5	9.7

The tabulated statement below shows the number of times the wind was observed blowing from the different points of the compass for the Winter seasons from 1877-8 to 1882-3—three observations daily:

WINTER OF—	N.	N.E.	E.	S.E.	S.	S.W.	W.	N.W.	Calm.
1877-78.....	66	7	15	69	54	19	3	11	26
1878-79.....	102	4	5	41	41	18	4	11	44
1879-80.....	41	13	19	77	30	17	6	47	23
1880-81.....	50	5	7	107	57	15	2	19	8
1881-82.....	86	9	8	75	35	18	7	12	20
1882-83.....	54	8	16	66	33	14	9	60	9
Mean average for 6 years.....	66	8	12	72	42	16	5	27	22

The following table shows the number of times the wind was observed blowing from the different points of the compass; also the number of calms observed during the Spring season from 1878 to 1883, and is as follows from three daily observations:

SPRING OF—	N.	N.E.	E.	S.E.	S.	S.W.	W.	N.W.	Calm.
1878.....	30	2	3	48	89	54	11	23	16
1879.....	34	3	1	29	82	75	13	16	23
1880.....	31	4	6	61	59	60	6	45	4
1881.....	50	4	4	42	71	71	10	14	10
1882.....	71	0	1	52	56	55	7	21	13
1883.....	13	3	8	57	91	50	9	42	3
Mean average for 6 years.....	38	3	4	48	75	61	9	27	12

The wind's direction for the Summer months for 1878 to 1883 will be found to be as follows:

SUMMER OF—	N.	N.E.	E.	S.E.	S.	S.W.	W.	N.W.	Calm.
1878.....	13	1	0	25	161	47	6	15	8
1879.....	24	1	0	5	117	79	8	37	11
1880.....	14	0	1	46	109	64	10	30	2
1881.....	21	1	0	58	115	55	6	16	4
1882.....	3	1	2	56	135	41	9	23	5
1883.....	6	0	0	54	127	50	9	29	0
Mean average for 6 years.....	13	0.7	0.5	41	126	56	8	25	5

The table following shows the direction of wind during the Fall months from 1878 to 1883:

FALL OF—	N.	N.E.	E.	S.E.	S.	S.W.	W.	N.W.	Calm.
1877.....	59	10	5	19	78	29	9	31	33
1878.....	75	5	3	12	64	36	15	37	26
1879.....	45	9	9	41	66	42	4	28	38
1880.....	75	7	7	40	55	37	12	30	10
1881.....	81	10	2	46	46	35	8	28	16
1882.....	19	8	5	60	54	27	20	66	14
1883.....	30	4	10	62	66	29	6	53	12
Mean average for 7 years.....	55	7	6	40	61	33	10	39	21

The following data shows the number of times the wind was observed blowing from the different points of the compass, and also

the number of calms occurring at the time of observations. The calculations are made from three daily observations, making 1,095 observations during each year, and 1,098 for 1881, and is as follows:

YEAR OF—	N.	N.E.	E.	S.E.	S.	S.W.	W.	N.W.	Calm.
1878-----	194	11	12	151	364	155	36	84	88
1879-----	165	18	14	140	306	220	29	104	100
1880-----	162	24	33	239	259	172	34	147	30
1881-----	217	24	12	232	280	176	30	72	51
1882-----	167	14	21	251	276	145	43	140	37
1883-----	102	17	37	243	322	138	31	173	29
Mean average for 6 years-----	168	18	21	209	301	168	34	120	56

The following table shows the total number of clear, fair, and cloudy days; also, the number of days in which rain fell for each year, from 1878 to 1883:

YEAR OF—	Clear Days.	Fair Days.	Cloudy Days.	Days on which Rain Fell.
1878-----	225	81	59	67
1879-----	223	96	46	69
1880-----	244	62	60	58
1881-----	233	68	64	69
1882-----	251	71	43	62
1883-----	260	77	26	46
Mean average for 6 years-----	239	76	49	62

RAINFALL IN TRINITY COUNTY.

The opening of the northern portion of the State to settlement, as evidenced by the extension of the California and Oregon Railroad, and the inquiries concerning lands in that region for various uses, renders the amount of annual rainfall of that division of the State a subject of interest and value to the prospector. We therefore give below, by months and seasons, the amount of rainfall and melted snow which has been precipitated at Weaverville, Trinity County, from July 1, 1871, to December 23, 1883, as reported by George E. Noonan, and furnished by Sergeant Barwick:

Months.	1871-2	1872-3	1873-4	1874-5	1875-6	1876-7	1877-8	1878-9	1879-80	1880-1	1881-2	1882-3	1883-4
July-----						.47	.02	.02	.38		.44	.08	5.00
August-----		.25					.21	.03	.36			1.38	
September-----	.29	.35	1.80			.67	1.28	.03			.94		.88

Snow-----	2.40	4.00	9.47	3.00	11.00	.76	3.25	3.50	13.56	2.50	7.50	2.25	4.53
Waterfall-----	56.97	25.06	49.71	24.72	62.13	33.00	63.95	41.71	50.56	52.22	36.43	33.57	14.36

Weaverville is at an altitude of a little over two thousand feet.

CLIMATOLOGY OF CALIFORNIA.

The following tables, compiled by Charles B. Turrill, from records in the office of the Chief Engineer of the Central Pacific Railroad Company, show the results of three daily observations (viz.: at 7 A. M., 2 P. M., and 9 P. M.), made at eighty-five stations in California, as follows:

1. Maximum temperatures in each month of 1883 and the yearly mean *maximum* temperature.
2. Minimum temperatures in each month of 1883 and the yearly mean *minimum* temperature.
3. Mean temperatures for each month of 1883.
4. Rainfall for each month of 1883, and the total rainfall for the year.
5. Snowfall for each month of 1883, and the total snowfall for the year.
6. Direction of the prevailing wind during each month of 1883, and direction of prevailing wind for the year.

In presenting these tables the compiler regrets the lack of fuller data on which to base these statistics of climatology. It was the intention to elaborate these so as to include other important information, but a lack of time and pressure of other duties has prevented. Nevertheless, it is hoped that the information herein contained may be of some service, and may incite observers throughout the State to careful and methodical registration of those facts regarding the climate of California, which are so eagerly sought after by inquiring strangers who have an idea of coming here and building up homes in our valleys and among our mountains.

RAIN PHENOMENA OF SACRAMENTO VALLEY.

BY PROFESSOR A. F. GODDARD.

INTRODUCTION.

- 1—The paramount importance of the agricultural interest of California.
- 2—Its growing appreciation everywhere.
- 3—The noble work that the State Agricultural Society has done since 1852.
- 4—The State, and Sacramento City's recognition of such untiring devotion, by providing the palatial Pavilion in the State Park, inaugurated January 26, 1884.
- 5—The United States Signal Service in California and Sacramento City, the fruits of the late Dr. T. M. Logan's meteorological work for twenty-five years, until his course was finished upon earth.
- 6—H. H. Bancroft's tribute to California's worth, January 1, 1876; a graphic description. (See Record-Union.)
- 7—The increasing value of the thirty-four years annual tables of meteorological statistics, and especially the rainfall and periodical comparatively dry seasons.
- 8—The observed uniformity of the aggregate amounts of rainfall in cycles of *five* and *six* years.
- 9—The *sixth* and *seventh* years from 1843-44 to 1876-77 being uniformly the dry seasons.
- 10—Revision needed for the rain statistics of 1850-51.
- 11—The demand for scientific inquiry into the physical laws that give our periodicity of dry seasons and cycles of rainfall.
- 12—Some suggestions regarding retabulating the annual rainfalls for the thirty-four years' observations, so as to show the totals in each cycle of rains, as well as to show in other columns the means of the months, irrespective of storms swelling the month's returns, as at present shown, to seven and a half inches and over, up to fifteen inches.
- 13—About eighteen such observed storms noted in the thirty-four or thirty-five years, or about *one* in some one of the rainy months, every other year.
- 14—The means of the whole rainfall less the storms.
- 15—Recent comments of the press upon the cycle question, and our season; comments by General Bidwell and others; note of how the press and Signal Service are making up relative comparisons of other seasons and this to date.
- 16—The Record-Union's credit for first noting the cycle theory, September 5, 1881.

These are some of the kindred topics, that seem to well up in my mind with artesian force, as I attempt to ply my small auger, into the strata of the inexhaustible supply the State Agricultural Society of California represents. Whether I may invite your attention to a mere outline of them all, must rest with your judgment.

Most respectfully submitted.

A. F. GODDARD.

SACRAMENTO, February 4, 1883.

To the honorable Agricultural Society of the State of California:

GENTLEMEN: In compliance with the joint invitation of your esteemed former President, the Hon. Hugh M. La Rue, and your indefatigable Secretary, Edwin F. Smith, Esq., I most respectfully present the accompanying remarks, bearing upon the climatology of California, but more especially referring to the observed rain statistics of

this city, as the center of the great Sacramento Valley, in which so large a proportion of the people are interested. It is not my purpose to attempt a resumé of the whole matter, although it merits the fullest possible inquiry, and the State Engineer, the Hon. William Ham Hall, has, some years since, as is well known, most ably presented the leading characteristics of the rainfall throughout the State, with an unusual amount of details, incident to what was required for the protection of the valley lands from floods. And in another most able report, or reports, has treated upon the great question of suitable irrigation in various parts of the State—both matters being vital to the interests of agriculturists. But, while it was the magnitude of the great agriculturists interests of the State, that even started into existence the office of the State Engineer, a few years back, to give his undivided attention to the branches of physics appertaining to his office, and the special wants of the people, your Society, which was the forerunner of all strides in agriculture in our State, dating from 1852, and has been the foster parent of almost every other industry in our State, through your State Fair, held annually, at your Pavilion, and always ably reported; and especially the untiring labors of the late Dr. T. M. Logan, a member of your Society, in obtaining the daily meteorological statistics and data for twenty-five years—from 1850 to 1875—until his lamented decease (an invaluable work to all those interested in a careful analysis of every rain-storm and drought, etc., and should be published as a whole), together with many valuable papers on cognate topics, has so grown into the hearts of the people, that the State of California, and the City of Sacramento, has signalized your triumphs in the season of 1883-4, by dividing the honors of providing you a new palatial Pavilion, four hundred feet by four hundred feet, and reaching one hundred and sixty feet into the air, besides spacious galleries, where, until filled by industrial products next September, you can entertain thirty thousand people, more or less, upon suitable occasions. Your own Society deserves all the credit, however, for the adaptation of the means, that people so willingly contributed, to foster the grand purposes in view in your future record, which generations to come will receive the stimulus to carry on from your pioneer exertions.

Although, as I say, I have got some special features of deep interest regarding the rain statistics and seasons to present to you, still, having just witnessed, and felt a pride in attending, the inauguration of your new Pavilion in the State Park, on Tuesday, January twenty-ninth, and which you and the retinue of ladies, rendered additionally more attractive and magnanimous, by devoting the whole proceeds to our four benevolent institutions, I could not let the occasion slip, without some expression of the feeling it inspired me with, and I trust you will pardon me. Soaking rains without, may have somewhat detracted from the realization of as large proceeds as were deserved, but many felt that after a somewhat dry Winter, and forebodings beginning to arise of a dry season, that the rains were most propitious, and the whole people are jubilant. Still, the proverb says that "one swallow does not make a Spring;" and even this timely rain, does not determine what the whole season is going to be; we are not afraid of it, however. And that is and always has been, the buoyant characteristic of nearly the whole California people. Such reflections as these, therefore, impelled me to note them, and the great heart of the people, which perhaps no one has more aptly described,

than your honored citizen, Hubert H. Bancroft, of whom California may well be proud. The fact is, that the spirit he expressed runs so well through California farming operations, as well as every other enterprise and business, that I hope you will pardon me for quoting the substance of some of Mr. Bancroft's remarks from the Record-Union, dated January 1, 1876:

"There is something indescribably fascinating about California; an atmosphere both social and aerial; fascinating in its sunshine and its rain, and in its great heart. Culling from the strength and beauty of every nation, and winning off the chaff of their crudities. See him. A young and healthy infant, but a giant well formed, fat and saucy, one leg sprawling to the Atlantic, the other reaching to China. [Bancroft has it kicks China, but he meant it innocently doubtless, although now, perhaps, it may be almost regarded as a legitimate pun. This article need not be spiteful however.] One hand playing with the snows of Alaska. [There is a California audacity in that, considering that Oregon, Washington Territory, and British Columbia intervene; but Bancroft was looking to the future, and thought, perhaps—well, wait and see what 'the survivor of the fittest' does.] The other hand delving through Arizona, and pushing a ship canal through Nicaragua. Courage, strength, and beauty are in every limb and feature. Pinch the bantling, it does not cry, it scarcely squirms; fire could not destroy it; starve it with droughts, or duck it with floods, it only rolls its eyes, winks, and finds 'its bottle full.' [That expression Bancroft knew all mothers would understand, and he certainly never wickedly meant the whisky bottle, although California has had its experience of it.] California and her people are the greatest social and natural problems in the world—the mixing of races and its results."

Aptly as Bancroft understood the people, it reminds me that the poet Pope, perhaps twice fourscore years ago, expressed it in two lines:

"All nature's difference
Makes all nature's peace."

But Pope's field was more a dream than a reality. The limits of little "Great Britain" were so circumscribed, while California seems almost limitless, unless compared with the whole United States; and still it was through California enterprise, that the great highway was constructed from Sacramento and San Francisco to the Atlantic. What, therefore, may be the future of California? "What may it not be," in fact?

The annual tables of rainfall, etc., which Dr. T. M. Logan compiled from 1849 and continued to his decease in 1875, have since been supplemented by Dr. F. W. Hatch, and the United States Signal Service; a branch of which is established in Sacramento City, doubtless as a recognition of Dr. Logan's twenty-five years work, and the duties are faithfully performed by the meritorious young officer, Sergeant Barwick. It may not be long before the duties will be greatly enlarged, and the incumbent promoted to the rank and pay of Captain, as General Hazen, Chief United States Signal Officer, has intimated, all their efficient officers deserve such recognition, and he has indorsed a bill now before Congress for that purpose. It is in view, therefore, rather of the increased importance that will be attached to the Sacramento station of the Signal Service corps, as

well as at San Francisco, that I would like to notice an analysis of the rain tables, which has led me to the inference, that a very high class of scientific inquiry should be entered upon, to investigate more thoroughly than ever before done, the physical laws that appear to regulate a certain observed periodicity of our dry seasons, and nearly the same aggregates of rainfall during the cycles of the rain years, as they may be called, to distinguish them from the comparatively dry seasons. The details upon this matter will be subjoined. Before the present storm, much uneasiness was felt lest this season might be as dry and disastrous, as the season from September, 1863, to September, 1864, which only gave us 7.87 inches rainfall, being the lowest on record, excepting the season of 1850-51, shown in the tables as only 4.71 inches. In passing it ought to be noticed that 4.71 inches must have been below the actual rainfall. Dr. Logan had not reached the State until a later period, but entered such facts as he could collect. There are living witnesses, however—N. D. Goodell and others—who noted quite heavy rains in September, 1850, and they are reported in the Record-Union, February 13, 1882. The item gives a long list of rains in 1850, which should be looked into by your Society, with a view of determining about what rectification the table in that year needs. It is too long for me to transcribe, but none the less important. A discussion had been going on, and the article is entitled, "Settled—There certainly was *an inch or two* of rain in September, 1850." To proceed, however, the fears for this season, partly arose from rather light rains before the new year, or only 2.92 inches. That, however, alone, was not a legitimate cause of fear at all, for the annual tables show thirteen years of light rains, or less than three and one half inches before new year, and only five of them are claimed as being whole dry seasons, while one of them ran over twenty-one inches. And this season, although but 2.92 inches of rain fell before the new year, it was well distributed: 0.90 inches in September, 0.97 inches in October, 0.61 inches in November, and 0.44 inches in December, enabling considerable early sowing to be done, and the ground was kept mellow in the valley by protracted fogs, and what north winds we may have had were light. But the five dry seasons have been noted to have occurred at intervals of six, seven, seven, six years; and General Bidwell and others confirm that 1843-4 was a dry year also, which links seven years back from 1850-1, and points to the completion of another seven years forward, in the present season of 1883-4; a total uninterrupted period of forty years experience; which Sergeant Barwick noted on receipt of General Bidwell's confirmation of the dry season of 1843-4, while seven years back from the present, or the season of 1876-7, gave us only 8.96 inches rainfall. As the whole subject of periodical dry seasons and cycles of rainfall are considered in another place, I will now proceed to some other matters.

In passing I would like to remark that Dr. Logan's mode of making the rain table, from 1849-50 to 1864-5, inclusive, was preferable in some respects to the present mode of the Signal Service, because the Winter months being under each other, were much easier added up—in fact, there was a time that that portion was so added up in the table to the first of January, which was still better. Such comparisons are valuable for reference, and they need to be seen clearly. I admit that it will be said that there were then only fourteen years running on in line, while there are now thirty-four or thirty-five

years, and the twelve months on the top, and the column of totals for each year, and another column for each whole season, are convenient modes of showing the differences of the same month in different years, as well as the differences in the totals of each season or year. And there is of course a general compactness in the annual table as presented by Sergeant Barwick. The objection to running the table on in line for thirty-four years and over, may be easily obviated by dividing the table into as many groups as convenient. There are special reasons, in fact, considering the question of the periodicity of our dry seasons, which of late has received so much attention, for dividing the table into such cycles as have been observed, and the aggregate amounts of rainfall in each rain cycle clearly shown so as to make continued comparisons hereafter, and that is the subject of chief interest that I desire to call your particular notice to. True those aggregates may be easier made up, and seen plainer in the column of the thirty-four seasons, than by making the table to show six and seven years in width, which appears to be their ascertained duration, dating now from 1843-4 to the present time. This most important discovery, together with the approximately uniform amount of the aggregate of rainfall within the cycles, was first noted and published by the Record-Union of Sacramento, September 5, 1881, but escaped receiving the attention it deserved, perhaps, because the caption of the article afforded very little clew to the vitally interesting discoveries that it covered. It was entitled: "The Drought in the East, and the Approaching Rainy Season in California." Some exception might be taken to some of the incidental inferences drawn, and especially to a heavy rainfall being anticipated for the season, when it still only realized 16.51 inches; and their agricultural editor, January 7, 1882, and public opinion, concurred with the probability of rather light rains in that season. Sixteen and fifty-one one hundredths inches was a fair average, however. But, before I proceed, and in drawing attention to the annual tables, I hope it will be clear that the amount of each aggregate cycle should be footed up and expressed in the table, and consequently be there for reference, now and hereafter, with any other convenient forms of illustrating points noted by the press recently, and showing the rains footed up to January 1, always commencing with September; and, perhaps, still other incidental matters that may have occurred to your Society and others, convenient to be shown. The general attention of the press recently is noteworthy, and may deserve careful perusal, especially here and in San Francisco, and would well repay agricultural readers. I had hoped to have made a resumé of them, but I found that it would take more than all my time. There is much of interest, although some erroneous deductions have been drawn, as may be expected. Even Sergeant Barwick was so impressed with fear of the consequences of a dry season, just before the recent storm, that he remarked: "We must hope for the best, but prepare for the worst." Now, down to that time, we had only had $3\frac{1}{2}$ inches of rain, while dry seasons have brought us $10\frac{1}{2}$ inches, showing that 7 inches might be due still for a low season. Just then, from the twenty-fifth to the thirty-first of January, the welcome storm brought us $2\frac{1}{2}$ inches, and it has been showering to-day, February first. The land has had a good soaking, and can very well stand three or four weeks rest, with mild winds, sunshine, cloud, and fog, and perhaps a little frost. Such variety, and then our complement of even only 4.25 or 4.5 inches

more, divided between March, April, and the first week in May, ought to give us booming crops, on the uplands and the low lands. We are jubilant now, and have every reason to look and hope for a prosperous season, even with less than the average rainfall. Such dry seasons are anything but unmitigated evils, and even extremes of drought or flood serve their purpose in the wisdom of Providence. General Bidwell writing January 26, 1884, published in the Record-Union January thirty-first, concludes by remarking: "I am unwilling to believe that 8 inches of rain, after the dry Winter one year ago, will give good crops in Sacramento County. All my interests and hopes are that this year may be an exception to the dry season theory." If General Bidwell meant 8 inches more than the $3\frac{1}{2}$ inches, for the season, we had had at the date of his writing, I should think his remark was based upon some local exceptional causes, or severe north winds and frost, but I have not had time to look into that. I know that 1882-3 gave such hard weather, but still gave 18.11 inches for the whole season, which was very fairly productive and prosperous with some farmers; but neither that Winter nor the preceding could be called dry Winters. Six inches of rain fell in 1881, before January 1, 1882; and 7.55 inches in 1882, before January 1, 1883. The value of tables, for reference, is shown even by the occasional mistakes of prominent citizens, whom we all esteem. Eight inches is below the mean of our dry seasons, however, and as actual occurrences are never means, we may have about 10.46 inches, which I have already shown may suffice this season. We had that amount in 1856-7, and may get more. In the present instance, if our season gives us about 11 inches, and we have already had about 6.35 inches, we may still get about 4.65 inches before the end of the season. The crops are everywhere now prospering, and if we did not get a drop of rain in February, it would not hurt us much, and 4.65 inches may be plenty for March and April, and with a mild season we may get very early crops. Much rain in May would be, of course, very injurious. Fears of such a season as this, therefore, although it may figure only a low total, are quite unnecessary.

Two or three clippings from the press may show sufficiently the reassurance that is now felt, and as this rain storm is doubtless the heaviest we shall have this season, it is especially worth noticing. Santa Barbara, up to February second, seems to have been the center of the storm, 8.10 inches having fallen during the week (see Sunday's Chronicle.)

THE WELCOME RAINFALL.

[Alta California, Jan. 31.]

IT BRINGS GOOD CHEER TO THE FARMERS AND STOCK-RAISERS THROUGHOUT THE STATE.

The rain showers yesterday kept falling pretty constantly, though at times the wind shifted to the north and there were signs that the storm was about to break. Reports from different parts of the State bring the good news of a general rainfall, which is sufficient to insure a full crop. Its effect on the whole State is beneficial, and there is a general feeling in this city that all danger of a drought is past, and that our business men can look forward with confidence to a prosperous season. The present rain did not come any too soon, and in some sections especially given up to sheep raising, the suffering among those animals was very great. One prominent dealer had 100,000 head on Monday which were in imminent danger of extermination. But the moment the warm rain came, and the feed started as if by magic, the condition of affairs was so changed that each hour improved his bank account by thousands of dollars. This is but one instance. The following is the report from the Signal Service Department:

The rainfall yesterday amounted to .75 of an inch, making a total of 3.24 inches for the storm and 3.92 inches for the month, and 8.34 inches for the season, against 11.03 inches for the corresponding date last year; 8.02 inches in 1882; 21.35 inches in 1881; 11.53 inches in 1880, and

6.50 inches in 1879. At 8 P. M. the barometer read 30.08 inches and rising; temperature, 51 degrees; relative humidity, 85 per cent; wind was southeast and blowing at the rate of 4 miles per hour; light rain falling. The rainfall at other points on the coast yesterday was as follows: Tatoosh Island, none; Olympia, none; Fort Canby, none; Portland, none; Roseburg, none; Cape Mendocino, down to-day; Red Bluff, .46; Sacramento, .83; Los Angeles, none.

THE WELCOME RAIN.

[Call, San Francisco, Jan. 31.]

The rain storm of the past few days has, fortunately, been general throughout the State. It came at a time when most needed, and has been sufficiently abundant to satisfy the miners and farmers; and lowering skies, with frequent—in fact, almost continuous—showers, indicate that the end is not yet. All the fears entertained of a drought are now dispelled. Unless there is some unexpected intervention of bad luck, the chances for a fruitful harvest are as promising as could be desired.

There is another point in the annual rain tables, which I respectfully submit might be revised advantageously; and that is the so called means for the season, as well as the means for each month. The fact that we have periodical comparatively dry seasons, and two distinct cycles of rain years, pointing to two means of 115.84 inches and 132.18 inches respectively, for each five and six year cycle, might first point to a mean of those periods for *one* year, and then as the drier seasons form no part of the wet aggregates, excessive rainfall, in any month, should be deducted, if we want to show a mean of what may be expected in any month, or year, exclusive of such extremes either way. More than one table might be desirable for this purpose.

By way of illustration I may first ask your attention to Mr. Barwick's annual table as now presented. A very little inspection will show that we have repeatedly had from 8 inches and upwards in one rainy month, which has caused high water and done damage to the low lands. We have had, in fact, seventeen such storms since 1849, ranging from 8 to 15 inches. Let us call them 18, with a mean of 10 inches each, 180 inches. The total rainfall is footed at 665 inches; deducting the 180 inches, leaves us 485 inches. Then deducting the eighteen months from thirty-four years, leaves us thirty-two years and six months as our divisor for the 485 inches, giving about 15 inches for our mean, exclusive of excessive rains, which shows at once that 19.52 inches, which includes all the excessive storms, is too high a mean for seasons exempt from such storms. Then, again, we may observe that seventeen or eighteen out of thirty-four or thirty-five years is very close upon a *storm of 8 to 15 inches in every other year*. I admit that it would be more correct to add up the rainfall of each storm, and see how near eighteen such storms reach 180 inches. But I offer the remark rather as a suggestion, of some desirable modifications, to express our means for any month or year, closer than they are now expressed in the absence of excessive rains; while under the same column a kind of reserve fund should be shown for the percentage of storm expectation. It could be so fixed as to give us very close results, and would meet the practical wants of agriculturists. True, the storms scattered through the table show for themselves, but the means, as made up, are still misleading.

If my suggestion is adopted about making the annual table up into cycles of *five* and *six* years, however, with the dry season thereof in the sixth and seventh year separated, it would doubtless lead to modifications of the whole table.

There was one point in the Record-Union's article of September 5, 1881, and repeated January 26, 1884, I have not adverted to. They

stated "the current series has so far no maximum beyond 26.56 inches, and analogy indicates a heavy rainfall for the approaching season"—36.36 inches, 35.55 inches, and 32.79 inches rainfall having occurred in 1852-3, 1861-2, and 1867-8, and 36.00 inches for 1849-50, of course might have been added. The fact was that 16.51 inches was all the amount for 1881-2, which was then commencing, and 18.11 inches was all we had in 1882-3. But does it follow that such excessive amount as from 33 to 36 inches of rain in a whole season was necessarily due? I think not; more especially as the complement for the cycle was made up to 130.37 inches by the end of 1882-3, simply showing that the six seasons were nearer averaged, than in some of the other rain cycles; and it is observable that it only reached 26.53 inches in the series of five years between 1870-1 and 1876-7, which should be conclusive in itself. But the question is intimately related, doubtless, to the illustration I have already given of about eighteen storms, during our thirty-four or thirty-five years records. The last cycle has had three such storms at any rate. To work up the whole facts, a complete analysis should be made of Dr. Logan's daily meteorological register, his monthly remarks, and the "Press" remarks; but still we may approximate tolerably well in the way I have described already.

I am now writing, February fourth, and the rain storm has continued at intervals to date. Sunday's rain seems to have added only .09 inches to the 6.52 inches already noted. Early this morning we had quite a heavy rain, however, and the threatening clouds have entirely obscured the sky all day. Sergeant Barwick reports a very low barometer last night, and cannot well account for our not getting more rain up to that date. The downpour has been at Santa Barbara, however, and the south, although with great variations. The dry season prognostic, seems a little at a discount at present, but it will not be an anomaly opposed to forty years precedent if it proves a wet season. We need some inches rainfall yet, during the rainy season, to make up a dry season maximum. In the event of its footing up much more by June, and proving, therefore, an abnormal season, it may be within the range of possibility, that the supposed cosmic, volcanic, or other matter, floating in our atmosphere for so many months, at an altitude of about forty-six miles, as Professor Helmholtz, of Vienna, ascertained or computed, and gave such radiant after-glows long after sunset and before sunrise, and the phenomenon of green suns and blue moons, observed in various parts of the world, has ultimately gravitated towards the earth, and so commingled with our denser atmosphere, that abnormal precipitation has been induced in the East and in Europe, and to some extent on the Pacific slopes. Of course this is mere speculation, but a query for scientists. And the remarkable sunsets so many nations have witnessed with so much astonishment, has prompted investigations by the greatest scientists in the world, which will doubtless lead to most important results that may be learned from them. Meanwhile, right here, Dr. Pyburn, of this city, suggests, regarding rain phenomena, that as the nature of all space beyond the limits of our atmosphere may be practically the same, independent of special rings of cosmic matter, August and November meteorites, etc., and the earth revolves around the sun in such space, practically obtaining for the whole earth the same annual amount of heat, and causing the same amount of evaporation; so the whole precipitation of rainfall around the earth, should be nearly the

same, however unequal in each locality in any year, month, week, or day. The precipitation may be not only due, but actually fall in the rain belt and wind currents of the district, that such belt and currents properly belong to. The tidal sway, to and fro, exerting also a relatively similar pressure upon the atmosphere, per annum, unless we except the more rapid cooling of the earth's crust under the ocean, and consequent subsidence, and the proportionate upheaval of the lands, by the elasticity of the fluid or other matter within the body of the globe.

These reflections, however, still go to show the general law of compensation, which in longer periods may recur in any and every locality, and the observed periodicity of our droughts and rains, both being only relative terms, to which I have called your attention, seems to tally, therefore, with such general principles of ultimate compensation, without even seeking for interplanetary or lunar causes. Nevertheless, both may have particular influences at particular times, which, although seemingly abnormal, may, in fact, be periodical also.

CYCLES OF DRY SEASONS.

[Record-Union, Jan. 26, 1884.]

That the dry seasons of this State recur in almost unvarying cycles of about seven years, which fact is just now receiving attention, although none the less interesting, is not a new discovery at this time. Soon after the compilation by Sergeant Barwick, of the table showing the rainfall by seasons, etc., at Sacramento, for a then period of thirty-two years, which table first appeared in the Record-Union, an editorial upon the subject was published in that journal September 5, 1881, in which occurred the following:

The statistics of rainfall have been kept for thirty-two consecutive rain seasons, and the periodicity of maximum and minimum rainfall has been ascertained with a degree of reasonable probability, not to say certainty. The statistics show the recurrence of dry seasons with such regularity of interval as to almost establish an unvarying periodicity. For example, the first years of maximum rainfall exhibited on the rain tables for thirty-two seasons, recently published by the Record-Union, was the season of 1850-1; the second, in 1856-7; the third, 1863-4; the fourth, 1870-1; the fifth, 1876-7. Here are five dry seasons, occurring at intervals of six and seven years. From the date of the last there have elapsed but four seasons. The analogy of the past recurrence would fix the season of 1883-4 as the next dry season, or two seasons beyond that approaching. But there is a still greater regularity observable in the aggregate amount of rainfall in the seasons divided into groups by the minimum years. As this is a new observation of the statistics, it will be fully presented.

The first minimum season was that of 1850-1. Now, from the season of 1851-2 to 1856-7, inclusive, we have the first group closing with a minimum season—that of 1856-7. The aggregate rainfall of the period was 118.51 inches. The second group is from 1857-8 to 1863-4, inclusive, and the aggregate rainfall is 128.05 inches. The third is for 1864-5 to 1870-1, inclusive, aggregating 136.31 inches of rain. The fourth is from 1871-2 to 1876-7, aggregating 113.17 inches. Thus the average rainfall during the periods ending in minimum seasons is ascertained to be 124.04 inches. The current series, which is to end with a minimum season, has accomplished but four seasons. The aggregate rainfall in these is but 95.76 inches, or thirty-eight inches less than the average of the former cycles. Herein analogy gives a second strong inference in favor of a heavy season for the approaching Winter. But still a third is to be found in the fact that in four of the five cycles noted above, the maximum years exceeded thirty inches of rain in a single season. Thus in the first group, the maximum was 36.66; the second, 35.55; the third, 32.79, etc. The current series has so far no maximum beyond 26.57 inches. The observations of the past present these prominent facts, which, by the extension of analogies, indicate a heavy rainfall for the approaching season, and in favor of the probable recurrence of another dry season not earlier than that of 1883-4.

Upon this subject, Sergeant Barwick, in a communication, says:

What I say and refer to in the following article about the dry seasons in the past thirty-five years, and judging from their returning at stated intervals of six and seven years, must not be

taken as a prediction on my part, for such is not the case. I simply refer to the coinciding incidents of dry seasons occurring at six-year intervals, followed by two dry seasons of seven-year intervals, then returning again to the six-year interval. This being the seven-year interval following a six-year one, I thought it proper enough to bring it to the notice of the general reading public; not that I was the first one to notice such a regularity in the return of each dry season in the last thirty-five years, for several persons spoke to me about it some days ago. The knowledge of this being the seventh season from the last dry one, which usually produces another one, may do good to a great many. There may be seven or eight inches of rain yet this season; if so, it would bring the total rainfall up to ten or eleven inches. I will name the dry seasons, and the reader will readily see the regularity of the interval between each.

The first dry season occurred on the second season after the Forty-niners arrived here, that season being 1850-1, when the very small amount of but 4.71 inches was measured. Precisely six seasons from the above date, which was 1856-7, there was a comparatively dry season, there being but 10.46 inches. The next dry season did not occur for seven years, being the one of 1863-4—7.87 inches. The season of 1862-3 was not remarkable for its excess of moisture, for there was but 11.58 inches; at any rate it cannot be classed as a dry season. The next dry one repeated itself in seven years, and occurred in 1870-1—8.47 inches. Now the next dry one returns to the six-year interval, and occurs in 1876-7—8.96 inches. According to the records above we find that after a dry season has occurred in six years it was followed by two of seven years each, and as the last was a six-year interval (judging from the periodicity of dry seasons during the last thirty-five years), the present (seventh) season is the one to be a dry one. How far one can judge from such a thing as a past record remains to be seen; but everything points to the truth of the laws of nature repeating themselves again this season as they have done in the past, by giving a dry one. Let us hope for the better, but it is best to be prepared for the worst.

It will be seen by the annexed letter from General John Bidwell that the season of 1843-4 was a dry one, which strengthens the above theory:

CHICO, January 21, 1884.

James A. Barwick, Signal Service, Sacramento, California:

SIR: Having been in California something more than forty-two years, I can state of my own knowledge, to wit:

In the Fall of 1841 the country was without bread, because of the preceding dry Winter. What little wheat there was had to be saved for seed.

1841-2—The Winter was one of numerous and great inundations (fully equal to 1849-50).

1842-3—This season was quite open; had a moderate rainfall.

1843-4—This Winter, with the exception of one good rain in November or early in December, and a light rain in March, was almost rainless. No crops were raised in the Sacramento Valley, and nothing to speak of elsewhere. Fremont's first arrival in California was in March, 1844.

1844-5—Considerable rain this Winter, as I well remember, having camped out during the whole of it on a campaign (the war which resulted in the expulsion of Governor Micheltorena).

1845-6—Very wet; floods and inundations.

1846-7—Copious rains; good wheat harvest.

1847-8—Some early rains; open Winter; good rains in March.

1848-9—Very snowy; considerable rain.

1849-50—Very wet (but this comes within the historic period, which is unnecessary for me to repeat).

Pardon the liberty I have taken. Very respectfully yours,

JOHN BIDWELL.

A later letter from General John Bidwell is as follows:

CHICO, January 26, 1884.

James A. Barwick, Sergeant United States Signal Service Corps, United States Army, Sacramento, California:

DEAR SIR: Your letter of this date is before me. In regard to the rainfall of 1850-1, I am decidedly of the opinion that 4.71 inches is small for this part of the Sacramento Valley; because I know there were fine and even quite heavy rains in March and April. The little grain sown was good. The Fall of 1850 was dry, I think. You say, "I see by your report that the season of 1839-40 must have been exceedingly dry." I meant to say 1840-1; for I found there had been no harvest upon my arrival in California in the Fall of 1841. Therefore it was but three years to 1843-4, the next dry year, which was, I think, the driest of all the years I have seen. In regard to my belief, which you ask, I will say I am no weather prophet—in attempting to divine the seasons have failed too often. Am unwilling to believe that eight inches of rain, after the dry Winter one year ago, will give good crops in Sacramento County. The seven and six years theory of dry seasons, with some exceptions, is rather striking, and must be more so if future observations shall coincide. But all my interests and hopes are that this year may be numbered among the exceptions.

I am, with much respect, very truly yours,

JOHN BIDWELL.

THE DRY SEASON CYCLES.

EDITORS RECORD-UNION: The republication in your Saturday's issue of the illustration you compiled September 5, 1881, of the periodicity of dry seasons in California, from 1850-1 to 1876-7, inclusive, occurring in the rotation of six, seven, seven, six years; and the perhaps more remarkable presentation you gave of the approximate amounts of each aggregate rainfall within such periods, is especially in order at the present time, San Francisco papers and Mr. Barwick, of the Signal Service, having recently gone into the dry season inquiry. They have all omitted, however, to note your aggregates of the intermediate rains, which, in my judgment, gives the greatest value to the inquiry and points to a much more wonderful exactness, even, than you inferred at the time. In explanation, instead of massing the four aggregates—118.16, 128.05, 136.31, and 113.17 inches—as you did, and taking the mean, 124.05 inches, I note their relative order, being the amounts for five, six, six, and five years each, and it is instantly observable that the first and fourth, and second and third should be separately added and divided, giving us 115.84 inches and 132.18 inches respectively. Now, then, note: You remarked then that the unfinished aggregate for four years to the close of 1880-1 season (always made from September to June), figured up 95.75 inches, 26.57 inches being the amount for 1880-1. Mr. Barwick's table presented January 1, 1884, of course brings it up to 1882-3, showing 16.51 and 18.11 inches to be added to the 95.75 your article of 1881 explained. These three amounts, or in fact the rainfall for the six years, which is the same thing, gives us 130.37 inches, or within 1.81 inches of the aggregate mean for six years' rains, 132.18 inches. It seems astonishing, indeed, that these almost marvelous results, which you so nearly approximated in 1881, did not arouse agriculturists and others to their extraordinary signification. It seems manifest to my mind, however, that such results are governed by as certain laws as the figures present. And the interests of the people demand a thorough investigation of the physical causes of such relatively uniform operations of nature. The All-wise Being, who has created all things in the image of his own perfection, gives "signs" of His handiwork in the cycles of rains, and even the periods of comparative drought, for wise purposes. Exception might be taken to some of the side inferences you drew in 1881, but your presentation of facts gave us the key to what we may predicate now. I would like to make some remarks upon average seasons and average storms, but refrain from discussing them now, because it is preferable to keep the broad issues you illustrated in 1881 and now clear, and simply point out the urgency of scientific inquiry into the causes of such effects. General Bidwell's note that 1843-4 was a dry season gives another link of seven years back from 1850-1, warranting this being a seven-year period also, which shows that we can hardly look for more than 6 or 7 inches to complete our dry season. Such an amount, well distributed, will probably suffice, with good farming, in our valley; and many other districts seem to be quite as promising, so that short crops need not be feared, although this may be our dry season, so called.

A. F. GODDARD.

SACRAMENTO, January 30, 1884.

THE FEELING THROUGHOUT THE STATE PRIOR TO THE RAINFALL COMMENCING JANUARY TWENTY-SIXTH.

Santa Clara.

SAN JOSÉ, January 22.—The crop outlook here is not very encouraging. There has not been a rain sufficient to moisten the ground to permit plowing since Winter opened. The total rainfall to date is 2.33 inches against 3.53 for the same period last year. There has been considerable plowing done in the dry soil, in hopes that the rain will come soon and furnish the required aid. The acreage already sown is but little more than half that of last year. It is not expected, even with plenteous showers, that more than half a crop will be raised. The fruit growers are becoming despondent, for if there should be a dry season the crop will be very light, if not a complete failure. A few heavy showers at the right time will give the fruit trees all the sustenance required.

San Luis Obispo.

SAN LUIS OBISPO, January 22.—The rainfall for this county to date is 3.78 inches, very nearly the same as last year for the same time. The farmers generally express greater confidence in the season than ever before, and on the coast a much larger acreage has already been put in than for many previous years. East of the Santa Lucia Range over twenty thousand acres have been plowed, the greater portion being lands broken for the first time. Rain is greatly needed. The dairy interests all along the coast are suffering for it. The fruit interests are also somewhat affected through the same cause. With, say five inches, more coming in February, our crops are secured, though the grasses may be short. We have yet four months in which to get twenty inches, our average rainfall.

San Mateo.

REDWOOD CITY, January 22.—The continued dry spell has not done any material injury as yet. In this valley nearly all the plowing has been completed and sowing will soon commence. After that work is finished there will be a pressing need for abundance of rain, as three Winters have passed without a sufficiency of water-fall to thoroughly saturate the ground. On the coast side of the county, in the vicinity of Halfmoon Bay and San Gregorio, the crops are later, and the work of plowing and sowing is not yet well under way, although that portion of the county is favored with nearly double the moisture that is obtained here. In the vicinity of Pescadero grain raising has been superseded by flax culture and dairying. Flax is almost a sure crop in that region and is found to be very profitable, while grain is not at all certain, but quite the contrary, owing to the heavy fogs that abound in that region, which are almost sure to bring rust, which is so disastrous.

Monterey.

SALINAS, January 22.—At the present outlook the crop prospect is not very favorable. The total rainfall to date is 2.65 inches, against 5.32 up to the end of January last year. The acreage of land plowed throughout the county is greater than any year before, and the work is a great deal better done. In fact the ground never was in so good a condition, and with a moderate Spring rain a fair crop may be expected. A large portion of the land plowed, however, has yet not been sown, the owners awaiting rain before sowing. The lower portion of the Salinas Valley—say from Salinas to Moss Landing—is very little plowed as yet, but that portion can be worked very late if we get rain in March or April. The stock on pasturage is not suffering for feed, although sheepmen are anxiously awaiting rain to furnish feed for the young lambs that will come next month.

San Benito.

HOLLISTER, January 22.—The long continued absence of rain has caused a feeling of great uneasiness in this county. There seems, however, to be no sufficient grounds for predicting anything less than an average season. Up to date 2.22 inches of rain have fallen. This is about one third less than is usual, but what we have had came at a most opportune time. Grain is not suffering in the least. Feed, although not abundant, is sufficient to sustain stock for some weeks yet, and cattle and sheep are now in as good condition as they usually are at this time of the year. Two inches of rain any time between this date and the eighth of February, followed by the usual Spring rains, will insure more than an average crop, so far as San Benito County is concerned. We see no good grounds for apprehensions of anything less than an ordinary harvest for 1884. Compared with previous seasons seeding is not far advanced, as the acreage already seeded this year will probably not foot up much more than two thirds of what it was last season. The farmers are all ready and waiting, however, and if a reasonable rainfall is received during the next two weeks every available acre will be seeded.

Tehama.

RED BLUFF, January 22.—The crop outlook for Tehama County in general is not bad, provided we have rain within two weeks. Green fields can be seen in every portion of the county, and some of the ranches have a flattering appearance for the season. The southern portion of the county is more in need of rain than the northern, but the farmers do not apprehend any great danger at present. We have had more than six inches of rain to date, and have been visited with damp fogs, which have done considerable to help the crops along. If the season is not closed with unusually dry weather, there is no reason to suppose other than that we will have a bountiful harvest. One fact is sure, we have never experienced a failure in crops in Tehama County, and in speaking with farmers, they believe the old rule will prevail.

Colusa.

COLUSA, January 22.—There is nothing green between Arbuckle and Willows. Above Willows, grain has sprouted, and on Stony Creek is not suffering very badly, but the ground is not wet, and without an extraordinary rainfall, we will have no crops, except on low land, probably some near the mouth of Stony Creek.

Santa Barbara.

SANTA BARBARA, January 22.—Four and thirty-one hundredths inches of rain has already fallen here. A larger amount of grain has been sown than ever before. No grain is as yet actually suffering for moisture, but rain must come soon in order to avert loss. Some localities are still too dry to plow.

Santa Cruz.

SANTA CRUZ, January 22.—The crop prospects are about an average. The farmers are still plowing, and planting is going on, though it is rather dry. The amount of acreage sown will be about the same as last season. The total rainfall to date is 4.23 inches.

Ventura.

HUENEME, January 23.—In this county, at least ten per cent of grain has been sown above last year, and twenty per cent over the year before. On the east side of the river, which includes the Colonia and Las Posas ranches, the increase of wheat sown is at least fifty per cent. The rainfall to date is only four and a half inches, but the older and most extensive farmers are not discouraged, and are still seeding every acre that the teams can plow. Still the prevailing and almost incessant northers since New Year have done an immense amount of damage, and the early sown grain is beginning to turn yellow. In this section, the late rains, say in February and March, are depended on to make crops. A large quantity of ground in the Santa Clara Valley is being reserved for corn and beans, which will be planted or not according as the rains do or do not come in February or March. The indications are that we are in for a dry season, but five good rainy days will change the whole outlook and delight the farmers.

Napa.

NAPA, January 22.—The rainfall for January has been .52 of an inch, and for the season 4.99 inches, which is much less than the usual rainfall to this date. The crops throughout the county are looking quite well, though rain would benefit them much. The soil is getting too dry to plow, but if rain should come during the next three or four weeks, a good crop will be assured, for a total failure has never been known in this valley. The acreage planted to grain is about the same as last year, though the amount planted is decreasing each year, and more land is planted to fruit and vines. The interest in fruit growing is as great this year as ever, and many new vineyards and orchards will be planted. Some of the wheat planted late has not yet sprouted, but all the early sown grain is up and growing nicely.

Shasta.

SHASTA, January 22.—The crop prospects of Shasta County look exceedingly well. So far, a great many have already planted and the balance are now planting. The acreage this year will exceed former years by several thousand. The total rainfall to date is 16.2 inches, which is much less than former seasons, but with late rains, all will turn out well.

Marin.

SAN RAFAEL, January 23.—Owing to the absence of rain, the outlook for this county is not as encouraging as it might be, and growing feed is not as abundant as it generally is at this date, but still, as the grass has got a good root, if we get rain by the middle of February, we shall come out all right.

CROP STATISTICS FOR 1883.

In 1882 Edwin F. Smith, Secretary of the State Board of Agriculture, instituted a system for collecting crop statistics, whereby the acreage and yield of the various cereals grown in each county of the State could be accurately obtained. The reports now obtained by the Secretary are from reliable and experienced correspondents in each county, and collated from most authentic sources. Following are the returns for the leading cereals grown the present year:

COUNTIES.	WHEAT.			BARLEY.		
	Acres.	Av'ge.	Bushels.	Acres.	Av'ge.	Bushels.
Alameda.....	153,810	10	1,538,100	37,450	24	898,800

The average of these products for this entire State is: Wheat, 12.39½ bushels per acre; barley, 24.45 bushels per acre; oats, 30.48 bushels per acre; rye, 11-60½ bushels per acre.

AMOUNT OF WHEAT AND BARLEY IN CALIFORNIA, DEC. 31, 1883.

SAN FRANCISCO, January 12, 1884.

To the President, Board of Directors and Members of the San Francisco Grain Exchange:

GENTLEMEN: Your committee on information and statistics, to whom was referred the compilation of information respecting the stock of wheat and barley on hand in this State on December 31, 1883, respectfully submit the following as the result of their labors.

Your committee desire to acknowledge their obligation to warehousemen throughout the State and to the officers of the railroad and steamer lines for prompt and valuable assistance in procuring information. From the method procured and the care taken in preparing this statement, your committee believe it will be found as accurate and reliable as it can be made:

FRENCH PRUNES IN CALIFORNIA.

By HON. JOS. ROUTIER, OF ROUTIER'S STATION, SACRAMENTO COUNTY.

DRYING THE FRENCH PRUNE, OR PETITE PRUNE D'OREGON. EXTRAORDINARY PROFIT OF THAT INDUSTRY IN CALIFORNIA, PARTICULARLY IN SACRAMENTO COUNTY AND COUNTIES SURROUNDING.

California is certainly the paradise of the fruit grower. A fortune can be made in ten years from a fruit ranch of eighty acres, or even of forty acres, mostly by anybody blessed with that amount of good land. Now I will demonstrate how any enterprising man, with a very limited capital, can also make himself and family very comfortable and even rich with ten acres of bottom land, if planted in French Prunes, or *Petite Prunes d'Oregon*, which is the same thing.

The trees must be grafted or budded on plum stock, and be one or two years old—I prefer one year old trees. They must be planted about twenty-one feet apart, so it will take one hundred trees per acre. Good trees ought to be had for twenty cents apiece, or by the thousand for fifteen cents. The holes must be dug from two to three feet square, according to quality of the soil.

The fourth season after planting, and even the third if your trees have been well taken care of, you will obtain about ten pounds of prunes to each tree, enough to initiate yourself to the drying business. The fifth year you will get about sixty pounds to each tree. The sixth year one hundred and twenty pounds or more, to the tree. After that your trees are in full bearing, producing according to location and care, from one hundred and fifty to three hundred pounds to the tree.

The only trouble now is the drying of the prunes in a satisfactory manner, without spending thousands of dollars in building driers. Driers are a necessity in Oregon, or any other wet country, but here in California we can dry the French prunes to perfection without driers; sometimes in one week, and more generally in two weeks, in following the following instructions.

Do not pick the prunes by hand, as they do not ripen all at the same time, but in about three weeks. Begin to shake your trees towards the twentieth of August, then every week after, and on the fourth time pick them clean.

Now for drying. The only apparatus needed is an iron kettle holding from twenty-five to fifty gallons of water. To each twenty gallons of water add one pound of the best American concentrated lye; have the water boiling, then take a wire basket of some kind, the home-made one will do best, put twenty pounds of green prunes in your basket, dip them in the boiling kettle, let them remain in there about one minute, till you perceive that the skin of your prunes are cracked all over, then take them out and lay them on a tray, and in one

week or ten days, according to the heat of the sun, your prunes will be dried enough to put them loose in any kind of boxes holding fifty or seventy-five pounds. The trays can be made very cheaply (about ten cents each) with four sawed redwood shakes three feet long, nailed on a very primitive frame, by anybody who ever used a saw and hammer.

Now, when your prunes are all dried, and you want to give them the finishing gloss for the market, do as follows: Fill your kettle again with water, but this time no lye is wanted, and when the water is boiling steep your prunes in it with your wire basket for about a minute, till every prune is made quite hot, then expose them to the sun for that day, and the next morning you can pack them in boxes or sacks, as you prefer. This last steeping will make your prunes very clear and glossy, and will kill every insect and destroy their eggs effectually.

If you follow the above directions you will turn out an article equal to the best in the market, and will obtain the best price.

Let us now figure the cost and profit.

COST.

Ten acres of bottom land at \$100 per acre	\$1,000 00
One thousand trees at fifteen cents each	150 00
Plowing the land	25 00
Digging the holes	50 00
Planting the trees	25 00
Cultivating	25 00
Second, third, and fourth years, fifty dollars each for plowing and cultivating	150 00
Taxes for four years	50 00
Total	\$1,475 00

PROFIT.

The fifth year you will have 1,000 trees bearing at least sixty pounds each, or thirty tons, equal to ten tons of dried prunes worth ten cents per pound, or \$200 per ton.	\$2,000 00
If you deduct ten per cent for labor you will have a balance of \$1,800 net, paying for the whole of the investment and \$300 profit left.	
The sixth year you will have sixty tons of green fruit, or twenty tons of dried prunes, worth	\$4,000 00
On the seventh year your trees will be in full bearing condition, and will bring each from 150 to 200, or even 300 pounds to the tree, and I believe I am on the safe side when I say that each tree will bring you five dollars net each year, or	\$5,000 00

All of this from an investment of less than \$1,500. And what would be the value of a property bringing \$5,000 a year? I suppose not less than \$25,000.

I dried this year twenty tons of French prunes from six hundred trees, and got \$4,000 for them in sacks.

THE FERTILE LANDS OF CALIFORNIA.

• BY C. H. STREET, ESQ., SECRETARY IMMIGRATION ASSOCIATION OF CALIFORNIA.

The impression prevailed with the early settlers in California that its lands were not adapted to agriculture, and the belief still exists that the greater portion of the State is unfit for cultivation. This impression has been dispelled by actual experiments, which have been confined largely to the best valleys in the State. In other sections, more remote, the successful experiments of solitary settlers scattered through the small valleys, hills, and mountains, have not become generally known, and these districts, throughout the State, are still believed not to be suitable for farming.

The information which my position has necessarily enabled me to acquire, during the last two years, has led me to the conclusion that the only wholly non-productive lands in the State are in the Colorado and Mojave Deserts, and in that part lying east of the Sierra Nevada, extending northerly in spots from the Mojave to near the point where the Central Pacific Railroad crosses the State line, and the precipitous and rocky mountains of both the Coast and Sierra Nevada Ranges, and small patches here and there in other parts.

The fertile lands cover all the remainder of the State. We have classified the entire State as follows, first giving the area as 98,500,000 acres.

The area of lakes, bays, navigable rivers, and lands steep and rocky, or otherwise unproductive, in an agricultural sense, 14,500,000 acres.

The area of lands suitable at present for lumbering and mining, 23,000,000 acres.

The area of land, more or less fertile, 61,000,000 acres; to which may be added 12,000,000 acres of that portion of the timber land which, when cleared, will be available for agriculture; the soil being exceedingly rich, moist, and mellow, composed largely of decayed trunks of trees, limbs, leaves, roots, and underbrush, which have been accumulating on the flat places for ages, and will produce almost any crop known in the temperate zones, besides the semi-tropical fruits in places as far north as Shasta County, and often well adapted to stock raising even now. This timber, which is often dense forests, covers the Coast and Sierra Nevada Mountains from the north end of the State to their connection again a few miles north of Los Angeles, and extends on the Coast Range to the south boundary of the State.

Professor E. W. Hilgard has made such a full and truthful statement of a large portion of these lands in his report to the Agricultural Department, at Washington, on the soils of California, that I cannot refrain from quoting from it largely, more especially as the number of copies distributed in this State has been very limited.

I would add but one suggestion, and that is that the decayed vegetation, trees, limbs, and underbrush of the timber lands, in both ranges of mountains, are hardly given due prominence in the constituency of the soil.

Mr. Hilgard says:

Broadly speaking, it may be said that in the northern division of the Sacramento Valley the soils are prevalently loams, more or less heavy, largely interspersed with tracts of heavy clay or "adobe" soils, often the exact counterpart of the "prairie" soils of the Mississippi Valley; while in the southern portion, or San Joaquin Valley, the bulk of the soil is altogether prevalently sandy, occasionally to the extent of rendering them sterile; and what is there called "adobe," by way of contrast, would mostly be elsewhere considered a moderately clayey loam. As to intrinsic fertility, it would be difficult to decide between the two divisions; for while the heavier soils, other things being equal, are usually the richer in plant food, and therefore the more durable, the great depth of the light soils of the San Joaquin Valley seems to compensate in a measure for the somewhat inferior percentage of the plant food. This is the more true, as the "sand" is to a considerable extent not simply siliceous, but consists largely of comminuted granitic and eruptive rocks, with an admixture of the ancient slates, or rather schists, which cover the flanks of the Sierra and constitute the proverbial "bed-rock." Moreover, the "foothills" are commonly bordered, on the valley side, by a rolling plateau land, underlaid by the marly strata of the tertiary formation; and these, commingling with the materials brought from the higher lands, form naturally marled soils, whose thriftiness, when under irrigation, contrasts strikingly with their barren aspect during all but the Winter and early Spring months, so long as they remain in their natural condition.

From Redding, at the head of the Sacramento Valley, to Bakersfield, at that of the San Joaquin, the valley has along its eastern border a belt of upland varying in width from one to twenty miles, and from fifty to twenty feet above the natural drainage level, the soil of which is a yellow or reddish loam of varying character, evidently formed by an intermixture of the red soil of the foothills with the valley deposits. Much of this land, which is mostly too high to be reached by the present irrigation canals, has a singular hillocky surface, known as "hog wallows," doubtless the result of aqueous erosion in past periods. These "hog wallow" lands differ essentially both in their character and origin from those similarly named in Texas and other Gulf States (which are mostly heavy prairie soils), and even as far south as Merced County produce excellent cereal crops, as well as fruits, without irrigation.

On the western or Coast Range side of the valley, the soils are usually materially different. The Coast Range consists in the main of gray tertiary and cretaceous materials, prevalently clayey northward of San Francisco Bay, but growing more and more sandy, on the whole, in a southward direction. Hence, we find extensive tracts of very stiff "adobe" soils of very variable degrees of fertility on the western side of the Sacramento Valley, and as far south as the southern line of San Joaquin County, where the widely gaping cracks of the adobe, during the dry season, attract the attention of even the casual passer-by. Southward the soils lying at the foot of the Coast Range become increasingly sandy, as do the bordering hills, until in the region opposite Tulare Lake it is reported to be a "sandy desert." This statement may require to be taken with a considerable grain of allowance, since in the absence of any opportunity for irrigation, and of any serious attempts at settlement thus far, the capabilities of this region can hardly be said to have been fairly tested.

The soils of the western border of the Sacramento Valley are at many points materially and most beneficially modified by the admixture of materials contributed by the tributary valleys heading within the region of eruptive or volcanic rocks, whose southern portion has become noted for the high quality of the vines produced in the valleys of Sonoma and Napa. These soils are also originally red, as is still the case on the mountain-sides and higher benches of the valleys; and while less suited to cereal culture, they seem to be preëminently adapted to the perfecting of the higher qualities of fruits.

The orchard products of Vacaville, widely known for their excellence, are grown on such soils; and the fruit-growing region of Solano and Yolo Counties, the present center of the raisin industry, is covered by the joint deposits of the Sacramento River and Putah Creek, the latter one of the main drains of the volcanic region.

Soils quite similar to these, both in origin and productive qualities, exist on the opposite side of the valley, where the Tuolumne, Mokelumne, and Cosumnes Rivers traverses the volcanic tufas that cover the gold-bearing gravels of Table Mountain. As regards their general chemical character, the soils of the entire valley (of which quite a number have been analyzed, partly under the direction of the State Agricultural College, partly under those of the Census Office), are throughout remarkable for a high percentage of lime, which rarely falls below four tenths of one per cent, and most commonly ranges from one half to one and a quarter per cent. This circumstance explains, in a measure, the high thriftiness of these soils, allowing the rapid development and generous fruiting which accompanies the minimum allowance of moisture, and maintains the farmer's hopes that the success of a single season will suffice to wipe out the financial failures of two or three dry seasons. A generous allowance of potash accompanies the lime even in the very sandy soils of the Tulare Plains, mostly exceeding four tenths, and ranging as high as one and a quarter per cent. The phosphates are on the whole low in the sandier soils of the San Joaquin Valley, but high in the adobe soils of both divisions.

The red soils of the foothills have already been mentioned. The character of the foothills of the Sierra Nevada throughout its course along the Great Valley, varying from a moderately clayey loam (as in the placer region of El Dorado and Placer Counties) to a heavy, though not uncommonly gravelly, is an orange-red clay. This character seems to be sensibly the same, whether the soil be derived from the decomposition of the ancient shale "bed-rock" or directly from the granitic rocks, thus creating a presumption that the two rocks are closely related.

Where the foothill soils either obtain a sufficiency of moisture naturally, or can be irrigated, they prove abundantly productive, and are rapidly acquiring a special reputation for the excellence of their fruit product, both of orchards and vineyards. While at present it is in the main a region of Spring pastures, it is doubtless destined to be in the future one of small farms producing products of high value. The soils are highly charged with iron (ferric hydrate or rust) to the extent of from seven to over twelve per cent; which being finely divided, imparts to them the intense orange-red tint so familiar in the region of the placer mines, and during the dry season manifesting itself in the equally familiar red dust that disguises the natural tints even on the trees themselves. The soils of the foothills, so far as they have been analyzed, agree with the soils of the valley in having a high percentage of lime from about one third to one and a half per cent; while the supply of potash and phosphates, as well as of organic matter, is smaller and sometimes low, though never, apparently, inadequate for present productiveness, in the presence of so much lime.

The soils of the Coast Range vary greatly in the different portions of that broad belt of hilly land. In the middle portion, more or less directly related to the Bay of San Francisco, the "adobe" character is prevalent, not only in the valleys, but even on the summits of its rounded ridges, where in favorable seasons the yields of grain may be as high as in the valleys themselves. The soil is usually many feet in depth, with only here and there a rocky knoll projecting through it; cracks wide open in Summer, and when the rains come somewhat abruptly and violently, the water, descending quickly to the underlying bed-rock, gives rise to innumerable land slides, sometimes of considerable extent, and of vital importance to land owners. In the valleys intersecting such regions, and notably along the border of San Francisco Bay, there lie highly fertile tracts of "black adobe," or black prairie soil, sometimes so stiff and waxy as to be difficult to till, but under good treatment and in favorable seasons profusely productive. The adobe tracts are intersected, at right angles to the bay, by the belts of lighter sediment brought down by the present streams. In the country lying northward of the bay, the soils formed by the eruptive and volcanic rocks assume increased importance, and constitute the leading feature of the grape-growing region of Sonoma, Napa, Solano, and Yolo Counties, as well as further north, in Lake and adjoining portions of Colusa and Mendocino. Here the lower portions of the mountain sides are frequently constituted of the heavy tertiary and cretaceous materials which form adobe, while the upper portion consists of igneous rocks yielding lighter soils, often deeply colored with iron, and more especially adapted to fruit culture. The valley soils are of course a mixture of both, and it is on such composite soils that the enormous yields of from twelve to fourteen tons of grapes per acre are sometimes obtained.

Of the soils of the mountainous regions of Mendocino and the country northward to the Oregon line, but few data have thus far been obtained. Specimens of valley soils, especially that of Eel River, in Humboldt County, seem to show a great similarity to those of the coast valleys south of San Francisco Bay. It is a gray silt with very little coarse sand, many feet in depth, with high percentages of potash and phosphates, but deficient in lime, and, probably from that cause, difficult to till, and somewhat unthrifty after continued cultivation. Southward of San Francisco Bay, where with otherwise similar composition the lime percentage is large, this inconvenience is not observed, and these silty valley soils are remarkable for their retention of moisture near the surface throughout the dry season—a highly valuable property in the dry climate. "Adobe" soils are exceptionally in the southern Coast Range region, gray loams or silts, or sometimes sandy soils, being on the whole predominant in the uplands also. In the "semi-tropic" region of Los Angeles, San Bernardino, and San Diego, the uplands or "mesas," which occupy the larger portion of the surface, have usually a reddish, gravelly loam soil, more or less heavy in different localities, but on the whole remarkably uniform in its character. It seems to be a modification of the "foothills" soils northward of the Sierra San Fernando, but of greater depth, more easily tilled, and with higher percentages of plant food, especially of phosphates. Hence, though of the disconsolately arid aspect of a gravel bed in the dry season, these mesa lands when irrigated prove profusely fertile, and in Spring are covered with a dense carpet of bright flowers. For fruits adapted to the climate they are probably excelled by few so far as quality is concerned; although on account of greater facility for irrigation the lower levels and the terraces, or benches along the streams, have chiefly been occupied.

The soils of the Colorado River bottom is a light, pale-colored loam of great depth, highly calcareous, with over one per cent of potash, but a comparatively low amount of phosphates for a river bottom. It proves extremely fertile when cultivated.

The soils of Mojave and Colorado Deserts have received but little attention and examination thus far. While a portion of the surface is covered simply with drifting sands underlain by rock or hard-pan, there are in the Mojave Desert, at least, extensive tracts possessing a soil of fine gray silt, on which the *Yucca* tree attains a luxuriant development; while others are covered with low but dense growth of hardy shrubs, and grasses enough to render the Spring pasture valuable and nutritious, while the sheep crop the leaves of shrubs later in the season. Plainly a large portion of this desolate-looking country evidently awaits only the life-giving influence of water to be at least available for stock raising, and to no inconsiderable extent for

cultivation also. The lower portions of the Colorado Desert especially, are so severely afflicted with alkali of a corrosive character that, being incapable of drainage on account of being below the sea-level, their reclamation seems hopeless.

It is clear that Professor Hilgard believes the greater portion of the State is available for agricultural pursuits, and he is right.

East of the Sierras and south of the middle of the State are several valleys of considerable size, the largest of which are the East and West Walker, Mono, Owen, Armagosa, and Tehachapi. In some of these valleys there is a little fertile land which will be made use of some time in the future. The Owen Valley is about three miles wide by eighty long, and is four thousand five hundred feet above the sea. It is supplied with water for irrigation by numerous creeks that come down from the mountains. There is only an occasional rainfall. These valleys are adjacent to a great mining country. A narrow gauge railroad extends south through Walker, Mono, and Owen Valleys, connecting with San Francisco from the north. It will shortly be extended to Los Angeles. There will be a ready market for all produce raised. Wheat, barley, alfalfa, and the hardier fruits will grow here with irrigation. There is considerable alkali covering large tracts of these lands.

North of the Central Pacific Railroad is a section of country more fertile, having less alkali and more rain. There are numerous valleys here having considerable fertile land available without irrigation. Among them may be named Long Valley, running north and emptying into Honey Lake; Susan River Valley emptying into the same lake; Pine Creek Valley, Surprise Valley, which is five miles wide by forty long, having rich soil covered by a dense growth of wild clover; Fall River, Big, and other valleys, some of them being very rich, and productive without irrigation. The altitude is about four thousand feet. There is a railroad built twenty-nine miles north from Reno intending to touch some of these best valleys. About Mount Shasta, north, east, and west, are some rich basins, with good soil. In all this region the seasons are well defined. The Summers are short. The country is good for stock or dairy, or raising wheat, corn, and hay, including timothy and clover. The hardier fruits will do reasonably well. This district of country east and north of the Sierras, and north of Reno, will some day comfortably support a population larger than that now in the State. The Klamath basin lies westward of the Mount Shasta country, and has much fertile land. Scott and Shasta tributaries have each valleys of bottom land five miles wide and forty long. These lands lie two thousand feet or more above the sea, and are exposed to severe Winters and late frosts in Spring and Fall.

Passing to westward and southward are the Eel, and Mad, Navarro, Wahalla, and other river basins. These are in the redwood region, and for twenty miles from the ocean are covered with dense forests. There is a large population engaged in lumbering, and considerable farming is done on the open spots and where the land has been cleared by the lumbermen. The land, as a rule, is very mountainous, but the soil is exceedingly rich to the very summits. A large population may settle here and make a living with ease at farming. The ready communication with San Francisco by sea will cause this section to be sought after. The rainfall is always ample to produce crops, running streams are plentiful, and building material cheap. The title to the larger portion of these lands has passed into the hands of rich

milling companies, which fact may tend to retard rapid settlement by farmers.

Eastward of the redwood belt, in the same river basins, are three million acres of rich and fertile mountain and narrow valley lands, capable of a high state of cultivation. It is almost entirely unsettled, being distant from railroads from forty to one hundred and fifty miles. The title to these lands is still in the United States, and subject to the homestead and preëmption laws. There are two hundred and fifty thousand acres in the north part of Lake County which may be similarly described, and an hundred thousand in northwestern Sonoma, besides as much more which has passed into private ownership, all of which is almost entirely unsettled. All ordinary crops can be grown here. There need never be any sleepless nights on account of drought. Stock raising and dairying will always be profitable. Fruits of all kinds, except semi-tropical, will do well here. There are no severe Winters. There is snow on the higher peaks and farming going on in the valleys below at the same time. This entire region could easily support a population of one hundred and fifty thousand.

In Shasta, Tehama, Butte, and Colusa Counties are large tracts of unsettled land as fertile as any we have yet described and much less hilly, nearer railroads and every way desirable for settlement, still owned by the United States. The climate is so mild in some places that oranges have been grown fully equal to the Los Angeles best.

In the Coast Range, the headwaters of Salinas River with its tributaries form a basin about one hundred miles long and sixty miles wide in the widest place. The whole shaped like a twisted bow kite, and lying between the main Mount Diablo Range and one of its branches—the Santa Lucia—which hugs the ocean shore. The soil is rich and productive, and the beauty of the basin is not surpassed by the handsomest valley in the State.

Irrigation is not necessary. There are four rivers coursing through it. It may prove to be the New Jersey of the coast for peaches. Apricots do fully as well. Almonds have never failed to bear for a single year when tried. Wheat and barley have been grown for a century. This district is unsettled because of no railroad communication.

There are two hundred and fifty thousand acres of good land in the Monterey Mountains, suitable for general farming and fruits. It is especially adapted to dairying.

The same may be said of a million acres lying in the remote districts of the coast mountains south of this point.

We have gone over the remote lands thus fully because they are the least known. The many valleys of the State with their unrivalled climate and great variety of productions are known far and wide, especially by those who will read this article. The area of these valleys is less than that of the available, yet more distant small valleys, hill, and mountain lands. Lands in these sections are sold at from twenty-five dollars to three hundred dollars an acre, while the others are sold at from one dollar and twenty-five cents to ten dollars an acre. Besides the private lands, there are twenty million acres of Government land which may be obtained under the homestead and preëmption laws.

Of the seventy-three million acres of fertile lands in California only four million, or four million five hundred thousand acres at

most, are under cultivation. The question may be asked—why? Simply because we haven't people enough to settle them. The people who have settled here have done like the early settlers in all new countries—first taken up and improved the bottom or valley lands.

The Immigration Association of California has the names of many sturdy farmers scattered through these remote districts, whose labors and successes through the hardships of real frontier life for many years, prove the great fertility of the lands on the high mountain ridges, and on their foothills, and in their narrow valleys; in the brush and timber, and on the open plains; above the Winter snow-belt, and below it; in the regions where irrigation is not known, and in those where it has been thought to be indispensable; also from those places where crops cannot be grown without it. Time will prove these statements. Time will settle these remote lands. Time will see the more than nine hundred Spanish grants and other large tracts of land cut up into small farms.

The space allotted to us will not permit of an extended discussion of the lands not productive without irrigation, but which produce astonishing crops with it. We believe there is sufficient water, either running on the surface or beneath it, if properly stored and cared for, to irrigate all the lands which require it. It is a fact, however, which is being proved by experience every year, that much land is irrigated that does not need it.

Oranges have been grown from Bakersfield to Redding, and there are many evidences of their doing well without irrigation. The flavor is much improved, as is the case with all kinds of fruits and vegetables raised without irrigation. It is also proven that this fruit can be profitably grown even where the frosts are later and heavier than in the southern counties.

Neither have we space to discuss the winds, their currents and effects, nor the rainfall, the seasons, or the climate in general; the peculiarities which govern certain localities and have an important bearing upon the utility of our fertile lands. Neither to tell of the experiments with new things, of the wonderful yields of irrigated lands, and other matters of interest connected with the subject.

Our State is yet in its infancy. It is destined to be one of the richest sections of the world.

It is the second largest State in the Union: Texas, only, being larger. It is nearly as large as the Eastern and Middle States combined. Its length is about seven hundred and fifty miles; its average breadth two hundred and fifty miles; and its area about 154,500 square miles.

It is more than two and one half times as large as all of the New England States, in which is included the State of Massachusetts, with a population of 1,800,000. It is more than twice as large as the great States of New York and Pennsylvania together, which support a population of 10,000,000. It is larger than the three agricultural States of Illinois, Ohio, and Missouri, within whose boundaries 7,000,000 of inhabitants live comfortably, and have an abundance of room to spare; and which States still invite immigration within their borders.

California has as much seacoast as the New England States, New York, Delaware, New Jersey, and Maryland combined.

The San Francisco Bay is a better harbor than any on the Atlantic Coast; and the San Diego Bay is as good as any.

The number of acres of agricultural land, including tule and

foothill lands, as given by the United States Surveyor-General, is larger than that of the two most prosperous and populous States in the Union—New York and Pennsylvania.

The number of acres of timber land exceeds that of Minnesota and Wisconsin together; or that of all the New England States.

The mining region of California covers nearly as much territory as the mountains within her borders; and embraces a country as large as Michigan and Pennsylvania, which two States are noted for copper, iron, and coal. The mountains of the Golden State produce more gold than any other country in the world, and are rich in silver, lead, copper, iron, quicksilver, and other metals. In fact, the variety of precious and base metals is quite as great as that of Europe or Asia.

The climate of California is as balmy as that of Italy, and has almost infinite variety. The soil as deep and rich as that of France. The climate and soil will produce a greater variety of products than any other one political division in the world.

The storms are less frequent and severe than those of Spain, Portugal, or Japan. The surface of the country is not below the sea-level, and does not require the expense of maintaining hundreds of miles of diking, and immense levees, as does Belgium, or a large part of Germany.

The natural wonders are as marvelous and as great in number and variety as those of the Alps or Appenines.

With these varieties, equalities, advantages, and superiorities, California invites population from all the civilized world; and people from any clime may find a congenial home, similar, in many respects, to the one left behind.

The following figures show its superiority in size, and its inferiority in population, compared with some of the greatest, richest, happiest, and most prosperous nations on the earth:

	Square Miles.	Population.
California	154,500	860,000
San Salvador	7,335	600,000
Guatemala	44,778	1,180,000
Wales	7,377	1,300,000
Cuba	42,383	1,400,000
Greece	19,000	1,700,000
Chili	130,000	2,400,000
Ceylon	25,000	2,600,000
Switzerland	16,000	2,800,000
Scotland	31,324	3,600,000
Portugal	36,000	4,400,000
Ireland	32,512	5,402,700
Spain	193,000	16,565,000
England	50,922	23,500,000
Prussia	135,000	25,750,000
Italy	114,000	29,000,000
Japan	149,000	35,000,000
Syria and Palestine	60,000	3,000,000

TRANSACTIONS
OF THE
FIRST DISTRICT AGRICULTURAL ASSOCIATION

For the Year 1883,

Composed of the Counties of San Francisco, Alameda, and Contra Costa.

OFFICERS OF THE ASSOCIATION.

A. C. DIETZ.....	President
L. WALKER.....	Secretary
OAKLAND BANK OF SAVINGS.....	Treasurer

DIRECTORS.

A. C. DIETZ.....	Oakland, Alameda County
JAMES ADAMS.....	Oakland, Alameda County
R. P. CLEMENT.....	Oakland, Alameda County
W. E. MILLER.....	Oakland, Alameda County
THOMAS EWING.....	Oakland, Alameda County
JOHN B. WATSON.....	Oakland, Alameda County
C. H. CUSHING.....	Oakland, Alameda County
D. F. MAJORS.....	Concord, Contra Costa County

REPORT.

OAKLAND, December 31, 1883.

To the honorable the State Board of Agriculture :

GENTLEMEN: The Directors of the First District Agricultural Association submit this, their report of the transactions of said Association, for the year ending this date.

L. WALKER, Secretary.

RECEIPTS AND EXPENDITURES.

Receipts.

Received from sale of annual membership tickets.....	\$283 75	
Received from fines.....	5 00	
Received from sale of daily admission tickets.....	3,564 75	
Received from privileges.....	2,824 14	
Received from sweepstakes.....	28 00	
Received from life memberships.....	50 00	
Cash on hand September 1, 1883.....	2,562 72	
		<u>\$9,318 36</u>

Expenditures.

By amount paid trotting purses.....	\$3,136 66	
By amount paid running purses.....	804 99	
By amount paid office expenses.....	510 80	
By amount paid for advertising.....	1,335 01	
By amount paid for park expenses.....	714 44	
By amount paid for pacing purses.....	75 00	
By amount paid for bicycle purses.....	50 00	
By amount paid for ladies' riding tournament.....	100 00	
By amount paid for premiums.....	1,745 50	
By amount paid employes.....	560 75	
By balance cash on hand.....	285 21	
		<u>\$9,318 36</u>

EXHIBITS AND PREMIUMS AWARDED—1883.

FIRST DEPARTMENT.

LIVE STOCK.	Name of Owner.	P. O. Address.	Name of Animal.	Award.
CLASS I—THOROUGHBRED HORSES.				
Best stallion, three years old and over	J. B. Chase	San Francisco	Wheatley\$30 00
Best stallion, two years old and over	J. C. Simpson	Oakland	Sir Thad\$15 00
Best stallion, one year old	J. B. Chase	San Francisco	Hidalgo\$10 00
Best thoroughbred mare, three years old and over	J. B. Chase	San Francisco	Marian\$20 00
Second best thoroughbred mare, three years old and over			Lady Viva\$10 00
Best mare, two years old	J. B. Chase	San Francisco	Gloriana\$10 00
Second best mare, two years old	J. B. Chase	San Francisco	Susan\$5 00
CLASS II—FAMILIES OTHER THAN THOROUGHBRED.				
Best stallion, with not less than five of his colts	Newland & Pumyea	Oakland	Grand Moor and six colts\$25 00
Best dam, with not less than two of her colts	Ben. E. Harris	San Francisco	Lena Bowles and two colts\$15 00
CLASS III—HORSES OF ALL WORK.				
Best stallion, three years old and over	R. O. Baldwin	Contra Costa County	Gold Hill\$20 00
Second best stallion, three years old and over	Mrs. E. Knott	Lahonda, S. Mateo Co	Magic\$10 00
Stallion, three years old and over	T. F. Batchelor	Sunol	Crown Prince 2d
Stallion, three years old and over	Thomas Morrow	Petaluma	Charlemange
Stallion, three years old and over	Chisholm & Sackrider	Oakland	Black Prince
Best stallion, two years old	W. H. Bow	Seattle	Sotoyone\$15 00
Best mare, three years old and over	B. E. Harris	San Francisco	Lena Bowles\$15 00
Second best mare, three years old and over	B. E. Harris	San Francisco	Frankie Eaton\$8 00
CLASS IV—ROADSTERS.				
Best stallion, four years old and over	Newland & Pumyea	Oakland	Poscora Hayward\$25 00
Second best stallion, four years old and over	James M. Learned	Stockton	Adrian\$12 00
Stallion, four years old and over	Charles J. Ellis	Los Angeles	Bob Mason
Stallion, four years old and over	J. Harrill	Visalia	Loppy
Stallion, four years old and over	John McKeague	San Francisco	King William
Best stallion, three years old	Charles Durer	Sunol	Meleor\$20 00

Best stallion, two years old	McClellan & Harris.	Contra Costa County.	Oscar Steinway.	\$15 00
Second best stallion, two years old	J. E. Durham	Pacheco	McVeagh	\$8 00
Best yearling	M. Mendenhall	Livermore	Grand Moor, Jr.	\$10 00
Second best yearling	Andy Patterson	Alvarado	Boxwood	
Yearling	Ben. E. Harris	San Francisco	Bravo	
Best suckling colt	Ben. E. Harris	San Francisco	Regulator	\$5 00
Best mare	Martin Carter	Newark		\$25 00
Second best mare	Charles Durer	Suñol	Elsie	\$12 00
Mare	John Green	Alameda County	Stemwinder	
Gelding	A. J. Bryant	San Francisco	Rosalind	
Gelding	C. Younger	San José	Whisper	
Gelding	Ben. E. Harris	San Francisco	Ned	
Gelding	Frank Leighton	Contra Costa County	Lightning	
Best yearling	Martin Welch	Oakland	Clilo	\$10 00
Yearling	L. J. Rose	Los Angeles		
Best suckling colt	Ben. E. Harris	San Francisco	Lenaford	\$5 00
CLASS V—DRAFT HORSES.				
Best stallion, three years old and over	Chisholm & Sackrider	Oakland	Papalon	\$20 00
Second best stallion, three years old and over	Chisholm & Sackrider	Oakland	French Spy	\$10 00
Stallion, three years old and over	F. Thalmann	Pinole	Pipole Chief	
Best stallion, two years old	Chisholm & Sackrider	Oakland	French Spy 2d	\$15 00
Best stallion, under one year	Chisholm & Sackrider	Oakland	Don	\$10 00
Best mare, three years old and over	Chisholm & Sackrider	Oakland	Lucy	\$15 00
CLASS VI—CARRIAGE HORSES.				
Best span carriage horses, sixteen hands high or upwards, owned and used by one person, shown to carriage or buggy, two or more to complete	Ben. E. Harris	San Francisco	Dan and Tom	\$20 00
Best saddle horse	Ben. E. Harris	San Francisco	Max	\$10 00
Second best saddle horse	Ben. E. Harris	San Francisco	Soltaire	\$5 00
SWEEPSTAKES.				
Best stallion of any age or breed	Newland & Pumyea	Oakland	Grand Moor	\$50 00
Second best stallion, any age or breed	J. C. Simpson	Oakland	Antevolo	\$20 00
Stallion, any age or breed	Chas. J. Ellis	Los Angeles	Bob Mason	
Stallion, any age or breed	J. C. Simpson	Oakland	Anteo	
Stallion, any age or breed	Jas. M. Learned	Stockton	Adrian	
Best mare of any age or breed	J. C. Simpson	Oakland	Lady Viva	\$30 00
CLASS I—DURHAM CATTLE.				
Best bull, three years old and over	C. Younger	San José	2d Duke of Alameda	\$25 00
Best bull, two years old	C. Younger	San José	Forest King	\$20 00

FIRST DEPARTMENT—Continued.

LIVE STOCK.	Name of Owner.	P. O. Address.	Name of Animal.	Award.
Second best bull, two years old	C. Younger	San José	1st Duke of Forest Home	\$10 00
Best bull, one year old	C. Younger	San José	Kirklevington of Forest Home	\$10 00
Second best bull, one year old	C. Younger	San José	8th Duke of Forest Home	\$5 00
Best bull calf, under one year	C. Younger	San José	2d Duke of Forest Home	\$5 00
Bull calf, under one year	C. Younger	San José	16th Duke of Forest Home	\$20 00
Best cow, three years old and over	C. Younger	San José	3d Oxford Rose	\$10 00
Second best cow, three years old and over	C. Younger	San José	Jessie Maynard	\$10 00
Cow, three years old and over	C. Younger	San José	Red Dolly 2d	
Cow, three years old and over	C. Younger	San José	2d Rose of Forest Home	
Best cow, two years old	C. Younger	San José	9th Rose of Forest Home	\$15 00
Best cow, one year old	C. Younger	San José	11th Rose of Forest Home	\$10 00
Cow, one year old	C. Younger	San José	Lady Mary	
Best heifer calf, under one year old	C. Younger	San José	4th Oxford Rose	\$5 00
Heifer calf, under one year old	C. Younger	San José	13th Rose of Forest Home	
CLASS II—AYRSHIRE CATTLE.				
Best bull, three years old and over	George Bement	Redwood City	Archie	\$25 00
Second best bull, three years old and over	John B. Lewis	Sonoma County	Lindo	\$10 00
Best bull, two years old	George Bement	Redwood City	Melancon	\$20 00
Best bull, one year old	George Bement	Redwood City	Highlander	\$10 00
Best bull calf, under one year old	George Bement	Redwood City	Hector	\$5 00
Bull calf, one year old	George Bement	Redwood City	San Mateo	
Best cow, three years old and over	George Bement	Redwood City	Ethel Brown	\$20 00
Second best cow, three years old and over	George Bement	Redwood City	Miriam	\$10 00
Cow, three years old and over	George Bennet	Redwood City	Elaine	
Cow, three years old and over	George Bement	Redwood City	Cricket	
Best cow, two years old	George Bement	Redwood City	Helen McGregor	\$15 00
Best cow, one year old	George Bement	Redwood City	Highland Mary	\$10 00
Best heifer calf, under one year old	George Bement	Redwood City	Sybil	\$5 00
	George Bement	Redwood City	Marian	
CLASS III—JERSEYS OR ALBANYES, AND GUERNSEYS.				
Best bull, three years old and over	William Stricker	Oakland	George Washington	\$25 00
Second best bull, three years old and over	B. F. Fish	Santa Clara	General Grant	\$20 00
Best bull, two years old	Thomas Ward	Oakland	William	\$20 00
Best bull calf, under one year old	W. T. Mead	Oakland	Cockney	\$10 00
Second best bull calf, under one year old	W. Arps	Oakland	Modoc	\$5 00
Cow, three years old and over	Thomas Ward	Oakland	Bismarck	

Best cow, three years old and over.	Thomas Ward	Oakland	Bonita	\$20 00
Second best cow, three years old and over.	E. Wolfender	Oakland	Fannie	\$10 00
Best cow, one year old	W. T. Mead	Oakland	Bianche 5th	\$10 00
Best heifer calf, under one year old	Thomas Ward	Oakland	Lady Wilson	\$5 00
CLASS IV—DEVONS, HEREFORDS, HOLSTEINS, HOLDERNESS.				
Best bull, three years old and over.	J. R. Rose	Sonoma County	Curly John	\$25 00
Best bull, one year old	J. R. Rose	Sonoma County	Sonoma Boy	\$5 00
Best bull calf, under one year old	J. R. Rose	Sonoma County	Frank	\$20 00
Best cow, three years old and over.	J. R. Rose	Sonoma County	Ruby	\$20 00
Second best cow, three years old and over	J. R. Rose	Sonoma County	Blossom	\$10 00
Best cow, two years old	J. R. Rose	Sonoma County	Lola	\$15 00
Best cow, one year old	J. R. Rose	Sonoma County	Bonnie	\$10 00
Best heifer calf, under one year old	J. R. Rose	Sonoma County	Blossom 2d	\$5 00
Heifer calf, under one year old	J. R. Rose	Sonoma County	Ruby 2d	
Best herd Devon cattle of any age, one male, four females.	J. R. Rose	Sonoma County	Curly John, Ruby, Blossom, Lola, Bonnie	\$40 00
SWEETSTAKES.				
CLASS I—DURHAMS, HOLSTEINS, HOLDERNESS, HEREFORDS, AND DEVONS.				
Best bull	C. Younger	San José	Forest King	\$40 00
Second best bull	C. Younger	San José	2d Duke of Alameda	\$20 00
Best cow	C. Younger	San José	Jessie Maynard	\$30 00
Second best cow	C. Younger	San José	Red Dolly 2d	\$15 00
CLASS II—AYRESHIRE, JERSEYS OR ALDERNEYS, GUERNSEYS.				
Best bull	Thomas Ward	Oakland	William	\$40 00
Second best bull	George Bement	Redwood City	Archie	\$20 00
Bull	George Bement	Redwood City	Melancion	
Bull	B. F. Fish	Santa Clara	General Grant	
Best cow	George Bement	Redwood City	Miriam	\$30 00
Second best cow	George Bement	Redwood City	Highland Mary	\$15 00
HEEDS, ETC.				
Best herd of thoroughbred Durham cattle, over two years old, one male and four females, owned by one person	C. Younger	San José	Forest King, Jessie Maynard, 2d Red Dolly, 3d Oxford Rose, 2d Rose of Forest Home	\$40 00
Best herd of thoroughbred Durham cattle, under two years old, one male and four females, owned by one person	C. Younger	San José	Kirklevington of Forest Home, Lady Mary, 11th Rose of For- est Home, Belle of Forest Home, 11th Red Dolly	\$20 00

FIRST DEPARTMENT—Continued.

LIVE STOCK.	Name of Owner.	P. O. Address.	Name of Animal.	Award.
Best herd of thoroughbred Ayrshire cattle, of any age, one male and four females, owned by one person.	George Bement.	Redwood City.	Archie, Miriam, Ethel Brown, Elaine, Highland Mary.	\$40 00
CLASS V—GRADED CATTLE—COWS.				
Best cow, three years old and over.	T. Rosenstock.	Alameda County.	Betsy.	\$20 00
Cow, three years old and over.	T. Rosenstock.	Alameda County.	Mina.	\$5 00
Best cow, one year old.	T. Rosenstock.	Alameda County.	Louisa.	\$5 00
Best heifer calf.	T. Rosenstock.	Alameda County.	Mary.	\$5 00
Heifer calf.	T. Rosenstock.	Alameda County.	Rosa.	
MILCH COWS.				
Best milch cow, of any age or breed, giving the greatest quantity of milk.	C. Younger.	San José.	Jessie Maynard.	\$25 00
Milch cow, of any age or breed, giving the greatest quantity of milk.	C. Younger.	San José.	Maggie Dean.	
Milch cow, of any age or breed, giving the greatest quantity of milk.	Geo. Bement.	Redwood City.	Elaine.	
Best milch cow, of any age or breed, making the greatest quantity of butter.	Geo. Bement.	Redwood City.	Elaine.	\$25 00
Milch cow, of any age or breed, making the greatest quantity of butter.	C. Younger.	San José.	Maggie Dean.	
Milch cow, of any age or breed, making the greatest quantity of butter.	C. Younger.	San José.	Jessie Maynard.	
CLASS VI—CASHMERE OR ANGORA GOATS.				
Best thoroughbred buck.	C. Schroder.	Oakland.	Billy.	\$10 00
CLASS VII—SHEEP—SPANISH MERINO.				
Best ram, two years old and over.	E. W. Woolsey.	Sonoma County.	Crown Prince.	\$10 00
Second best ram, two years old and over.	E. W. Woolsey.	Sonoma County.	Brigham.	\$5 00
Best ram, one year old.	E. W. Woolsey.	Sonoma County.	Pathfinder.	\$7 50
Second best ram, one year old.	E. W. Woolsey.	Sonoma County.	Gold Dust.	\$5 00
Best pen of ewes, not less than five, one year old and under two.	E. W. Woolsey.	Sonoma County.		\$10 00
Best pen of not less than five ewe lambs.	E. W. Woolsey.	Sonoma County.		\$5 00
Best ram and five of his lambs.	E. W. Woolsey.	Sonoma County.	Brigham and five lambs.	\$10 00
Best Cotswold ram.	C. Younger.	San José.	Hancock.	\$10 00
Best Southdown ram.	Geo. Bement.	Redwood City.	Sonoma.	\$10 00

Best pen of Cotswold ewes, not less than five, one year old and over.	C. Younger.	San José.		\$7 50
SWEETSTAKES.				
Best ram of any age or breed.	E. W. Woolsey	Sonoma County	Crown Prince	\$20 00
Second best ram of any age or breed.	C. Younger	San José.	General Hancock	\$10 00
Ram of any age or breed.	Geo. Benet	Redwood City	Sonoma	
Ram of any age or breed.	E. W. Woolsey	Sonoma County	Brigham	
CLASS VIII.—SWINE.				
Best Berkshire boar.	W. T. Mead	Alameda County	Monarch	\$10 00
Best Berkshire sow.	P. L. Earhart	Alameda County	Millie	\$10 00
Best Berkshire sow and pigs, four or more.	P. L. Earhart	Alameda County	Bessie and six pigs	\$10 00
CLASS IX.—POULTRY.				
Best trio Light Brahma fowls	I. N. Lund	Oakland		\$2 50
Fair Light Brahma fowls	T. D. Morris	Sonoma		
Two trios Light Brahma fowls	I. N. Lund	Oakland		
Best pair Dark Brahmas	T. D. Morris	Sonoma		\$2 50
Pair Dark Brahmas	Wolfender & Halstead	Oakland		
Best pair Partridge Cochins	T. D. Morris	Sonoma		\$2 50
Fair Partridge Cochins	Wolfender & Halstead	Oakland		
Best pair Black Cochins	T. D. Morris	Sonoma		\$2 50
Best pair White Cochins	T. D. Morris	Sonoma		\$2 50
Best pair Buff Cochins	T. D. Morris	Sonoma		\$2 50
Pair Buff Cochins	Wolfender & Halstead	Oakland		
One pair Buff Cochins	Wolfender & Halstead	Oakland		
Best pair Plymouth Rocks	T. D. Morris	Sonoma		\$2 50

J. E. MOORE	Stockton
R. W. RUSSELL.....	Stockton

REPORT.

STOCKTON, December 3, 1883.

To the honorable the State Board of Agriculture:

GENTLEMEN: The Directors of the Second District Agricultural Association submit this, their report of the transactions of said Association, for the year ending this date.

J. L. PHELPS, Secretary.

RECEIPTS AND EXPENDITURES.

Receipts.

Balance on hand	\$4,390 16
Received entrance fees	5,749 00
Received for privileges	4,850 85
Received for tickets of admission	7,153 25
Received State Controller's warrant	1,500 00
Received for storage and rent	215 00
Received for sales of hay, grain, etc.	676 65
Received sundry donations	142 50
Received "Shippee" Harvester Company premium	250 00
Received L. U. Shippee premium	60 00
	<u>\$24,987 41</u>

Expenditures.

Paid premiums, 1883	\$1,761 50
Paid taxes and insurance	399 10
Paid permanent improvements at Park	8,857 55
Paid purses	7,802 50
Paid general expenses	5,004 76
Paid returned entrances	130 50
Paid premiums of 1882	21 00
	<u>23,976 91</u>
Balance cash on hand	\$1,010 50

ANNUAL ADDRESS

DELIVERED THURSDAY EVENING, SEPTEMBER 20, 1883, BY HON. JAS. H. BUDD.

LADIES AND GENTLEMEN: To an agricultural community water is the one great need; accompanying it we find bounteous crops and prosperity; without it vegetation dies. Where there is a high temperature and atmospheric dryness, enormous evaporation takes place; which, unless counterbalanced by moisture, parches the soil and renders it unfit for cultivation; but if abundance of water can be supplied to the soil, under the above conditions, it becomes much more productive than an equal area of land not so favored. The reason appears to be that where great heat exists water will supply nearly all the necessary food of plants. Evidently the component elements of the atmosphere and water more easily separate and enter into new and necessary combinations, or plants better imbibe and assimilate them where there is considerable attendant heat.

The wonderful effects of water are evidenced in Brazil, whereas across the Atlantic is seen the Great Sahara Desert, which needs but moisture equal to that of South America to cover its parched sands with verdure.

From the earliest periods man has seen the necessity of supplying by artificial means the moisture denied him by nature; he early sought to turn the waters from their natural channels upon the soil and thus increase its fertility. One of the earliest applications of science was the construction of dams, reservoirs, canals, and aqueducts for the purposes of irrigation, and the remains of these are the best monuments of an early civilization.

THE ANTIQUITY OF IRRIGATION

Is shown by Holy Writ. The writer of the Book of Ecclesiastics says: "I made me gardens and orchards, and I planted trees in them of all kinds of fruits. I made me pools of water wherewith to water the wood that bringeth forth trees." Moses (Deuteronomy xi, 10) refers to the mode of irrigation among the Egyptians, who of all people are to be praised for their early attention to the subject. Egypt is in age and importance one of the greatest of all agricultural countries. There we find ancient irrigation brought down to modern times. Formerly a dry, sandy waste, she has been reclaimed from the desert by overflows of the Nile, which is well called "Father of Egypt."

Irrigation is no experiment, it was coeval with the dawn of civilization. Around the statue of Rameses the Great is found sedimentary deposits nine feet in depth, which must have been three thousand years in accumulating. Irrigation was practiced in Egypt two thousand years before the Christian era. The mountains of Abyssinia,

the great water-shed of Central Africa, and the river Nile, constituted for her natural reservoirs and an irrigating canal which have secured during centuries an abundant supply of water at regular intervals; so that Egypt was the granary of the Eastern hemisphere. Dependent upon her rainfall, Egypt would have remained a part of the "Great Desert." Arabia, Abyssinia, and all the nations of antiquity practiced irrigation extensively. The Maub Valley, Arabia, was irrigated from a reservoir in which the waters were confined by a dam of high hewn stone, two miles long and one hundred and twenty feet high.

The Pharaohs canal, connecting the Red Sea with Pelusium, was built and used for irrigation. Assyria and Babylon were netted with like canals.

THE BRITISH GOVERNMENT

Upon assuming control of India found vast irrigating ditches, and upon the wealth produced from the lands irrigated by these, depended, largely, the grandeur and wealth which so excited the greed of England.

The green and fertile plains of China owe their productiveness and capacity to support their teeming millions to the same causes. According to J. Ross Browne, who made a tour of the celestial kingdom, "nearly the whole of this vast region is intersected by rivers, canals, and ditches, forming an immense network of irrigating systems and navigable highways. * * * The great canal is one of the most wonderful works in the world. By means of its river connections it formed, before its partial destruction, nearly a continuous water communication from Pekin to Canton, a distance of one thousand four hundred miles. The canal itself is six hundred and fifty miles in length; almost every acre is turned to account."

Italy and Spain have given irrigation much attention. In the former the waters of the Po are utilized. This river, rising high in the mountains, running along its bed often higher than the roofs of houses, is tapped here and there and its waters drawn off to "spread plenty over a smiling land."

In the south of France is a canal which cost, originally, \$8,000,000. Lombardy irrigates nearly one million five hundred thousand acres. Of Peru, Prescott, the historian, says: "Canals and aqueducts were seen crossing the lowlands in all directions and spreading over the country like a vast network diffusing fertility and beauty around them."

In North America the beneficial effects of irrigation have been felt. In New Mexico the Aztecs were once prosperous and highly civilized. There extensive ruins of canals are to be found. Arizona exhibits traces of

A VAST SYSTEM OF CANALS

Which formerly must have rendered fertile large portions of the present desert—the ruins of once populous cities being found in many places.

In Texas, as early as 1740, the Spaniards constructed irrigation ditches, none of which are in use at the present time.

Of all irrigation in the United States, that of Utah has been the most extensive and beneficial. Thirty-three years ago a traveler over this region would have beheld a barren waste of parched and unpro-

ductive land. Thus the Mormons found it. Subsisting the first year on herbs, they, under the guidance of Brigham Young, established a colony which has since grown wonderfully. The land which then would not have produced a bushel to the acre, now gladdens the eye by vast fields of waving grain; the desert has been reclaimed, and the little colony become a prosperous community—mostly through the aid of irrigation.

Nearly all the above irrigated regions and countries have a soil of light sandy loam; they have generally been of a level character, having a fall of but a few feet to the mile. Unaided by science, all would have lacked productiveness sufficient to warrant cultivation.

In our own State irrigation has been practiced to a considerable degree; sometimes by artesian wells, sometimes by canals and from river supplies. In Fresno County irrigation has been quite extensive, and the truth demonstrated that a small farm well watered is far more remunerative than a larger one watered only by rains. In Merced County extensive work has been and is now being done on irrigating ditches. In Santa Clara and San Joaquin Counties

ARTESIAN WELLS

Are being extensively used from which to water orchards and gardens. About three miles from this city is situated the farm of George S. Ladd. By boring a well at a cost of a few thousand dollars Mr. Ladd has secured water sufficient to irrigate hundreds of acres, and yet for seven months in the year the water runs to waste. From this one well, the water being carefully saved to the best advantage, from one to two sections of land might be watered. The effect of this well has been to nearly quadruple the value of Mr. Ladd's land, and increase its productive value to an extent that can by me be only estimated. It has more than doubled the value of the land contiguous to Mr. Ladd's farm. Dr. Grattan, Cutler Salmon, John McDougal, and others have sunk wells.

Wells can be sunk at a cost of about five dollars to the acreage irrigable by them, and will increase the value of said land by fifty dollars to one hundred dollars per acre.

California has a climate unexcelled for salubrity. The temperature of the interior is high, but, owing to the great atmospheric dryness, is not oppressive. It has a soil renowned for productiveness. In the smaller valleys the Winter and Spring rains, and along its coast the moisture-bearing fogs, insure good crops, but in the great valley of the San Joaquin the farmers, when dependent on the rainfall only, have met with many sad failures. The soil is rich, but the needed moisture when most required is lacking. In this valley are several millions of acres, a large portion of which might and should be irrigated. It has been demonstrated by able engineers that the water supply is sufficient, and the land slope great enough to render the construction of irrigating canals and ditches easy. Nature has done her part, and it remains for man to do his. Surely with the

APPLIANCES OF MODERN SCIENCE

We are not to admit less enterprise and energy than that possessed by the ancients.

That irrigation will pay wonderfully well is needless to argue.

Experience and reading has taught every intelligent man in the State this.

We have seen Egypt, China, Peru, Utah, and other countries reclaimed from the desert by this simple means. Where irrigation has been practiced in this State it has satisfied the demands of the most exacting. In Utah, the reclaimed desert, Brigham Young frequently raised as high as ninety bushels of wheat to the acre on portions of his irrigated land. With irrigation the "West Side" would easily produce an average of forty-five bushels per acre per annum with almost unvarying certainty. Gardens and vineyards and orchards and populous villages and cities would render it one of the most prosperous sections of the State.

As it is, failure after failure of crops have almost disheartened the farmers of that section of our State. They are now investigating and considering the advisability of bringing gunpowder to their aid, of establishing cannon stations from which to throw shell and ball into the passing and almost bursting rain-laden clouds, which need but slight concussion to force them to disgorge their moisture. Our brothers of the West Side are becoming discouraged—they are growing desperate. Settling on lands which, when there is sufficient rain, produce immense crops, they have year after year invested their scanty means, and watched with strained eye and aching heart the passage of some moisture-bearing cloud. Disappointment has followed disappointment until these, our friends, are almost driven either to desert their farms, or implore the aid of capital in the construction of irrigating canals and ditches sufficient to water the thirsty soil. It might cost a couple of millions of dollars to furnish the needed dams, reservoirs, canals, and ditches. It seems a large undertaking, but compared to any of the works of antiquity, it is insignificant. In ancient and almost savage Peru the Incas, for the irrigation of their fields, brought

WATER FROM RESERVOIRS

Several hundreds of miles; the aqueducts passed along the precipitous cliffs of the Andes, wound around the termination of the mountains, and in many places penetrated their solid sides through tunnels hewn without the aid of iron, crossed immense chasms upon walls of solid masonry; the conduits were of large slabs of freestone, closely joined without cement.

The dams to be constructed are but mud barriers when compared to those of Arabia, Egypt, and Aleonte in Spain.

But while small when compared with the works of antiquity, the work has been too great and expensive to enlist private capital. That it must soon become a work of necessity to construct an irrigating system for the West Side I firmly believe. Many farmers, discouraged beyond endurance, have left our State for Oregon and Washington Territory. More are leaving. How to check emigration and induce immigration will soon become a State problem.

Could capitalists be assured of a safe investment and a certain and profitable return, they would construct a system of canals sufficient to irrigate hundreds of thousands, if not millions of acres; a guarantee would have to be made them. They would not be willing to rely upon the sale of water only during dry years. There must be an assurance of a certain rate per acre per annum. I feel certain that

should the farmers of the sections needing water unite as one man, and invite the attention of capitalists to the subject, and guarantee a certain payment per acre per annum for such land as used the water, the same to be a lien upon the land, that capital sufficient for the work might be secured. The increased value of the land would pay for the work many times over.

WATER RATES

At \$1 25 per acre would pay the original investment in a few years. Well could the farmers give one third the present value of their lands to secure irrigation for them. Recently I sold my West Side farm, after holding it for years, and lost money on it. I could have given one half the land for water to irrigate the balance, and made thousands.

The effects of such a system of irrigation as that here hinted at are many. Time will allow me to briefly enumerate a few only:

First—Great increase in the fertility of the soil, and great increase in the products of the State.

Second—A large increase in immigration.

Third—A water communication to San Francisco, and a consequent competition in freight carriage with the railroad.

Fourth—Timber culture, the planting of trees sufficient to modify the climate of the San Joaquin Valley, and furnish sufficient wood for consumption by the inhabitants thereof.

Fifth—Increase in land values, and a corresponding decrease in the rate of taxation for others.

Sixth—The prevention of levee-breaking floods by furnishing a conduit for the surplus waters.

But I have not time to go into the benefits of such a system, not to elaborate the benefits enumerated; suffice to say that prosperity would follow, not only in the regions directly benefited, but throughout the State.

Whether our farmers will move in the matter is doubtful; while the farmer is the backbone of the State, he has but little inclination to enter into combinations. All other classes combine to further their own interests, knowing that

IN UNION IS STRENGTH.

But the farmer is of an independent, non-coalescing nature. When he does combine, push is the order of the day. When our San Joaquin Valley farmers move unitedly for a general irrigation system, its success will become assured.

No known land more needs the aid of science to develop her resources. In no known land can science do more towards their development. Science can render California rich in agricultural wealth. Naught else is needed, for every other excellency that mind can conceive or heart desire is encompassed within the boundary of your State. Bounteous nature scattered her golden sands along the banks of California's streams, she mingled the earth of the hillsides with bright shining particles of pure gold. She imbedded in the quartz foundations of the firm hills the riches of mineral wealth, she furnished the valleys with fertile soil, and placed on the mountain tops and in the river channels, reservoirs of grain-giving moisture.

She tempered the heat of Summer by ocean-bearing breeze, and has chained the cold of Winter on the summits of our mountain ranges. The orchard groves of Sicily are equaled by the orchards of Los Angeles. The figs of Syria find their counterpart in the gardens of San José. The vine bearing hills of France are more than matched in several of her counties. The wheat growing plains of Illinois and Iowa are surpassed in productiveness in our valleys, and the richness of the delta of Egypt and of the bottom lands of the Mississippi can be, by science aiding nature, rivaled in the San Joaquin Valley.

Nature has done her share for California, and it but remains for man to exert his energies to arrive at that degree of greatness which now lies within the easy grasp of the State. Will he do it?

PREMIUMS AWARDED—1883.

FIRST DEPARTMENT.

Time—2:40½; 2:37; 2:37½; 2:46.

RACE No. 7—PACING.

2:30 Class. Purse, three hundred dollars. Mile heats, best three in five, to harness and rule. Premiums: First horse to receive one hundred and eighty dollars; second horse, ninety dollars; third horse, thirty dollars.

Name and Pedigree of Horse.	By Whom Entered.	P. O. Address.
Brown Prince, unknown.....	C. Scutius.....	----- Sacramento
Fred. Ackerman, by Washington.....	J. T. McIntosh.....	----- Chico
Shaker, unknown.....	P. J. Williams.....	----- Sacramento

Position at Starting.	Position at Close.
1. Fred. Ackerman.....	Brown Prince.....
2. Shaker	Fred. Ackerman.....
3. Brown Prince.....	Shaker.....

Time—2:30½; 2:27½; 2:31½.

FRIDAY, AUGUST 31ST.

RACE No. 8—RUNNING.

Agreed running. Dash of one mile. Entrance, twenty-five dollars; one hundred and fifty dollars added.

Name and Pedigree of Horse.	By Whom Entered.	P. O. Address.
Belle, by Leinster.....	John Mackey.....	----- Sacramento
Mileta, by Lear.....	John Mackey.....	----- Sacramento
Jubilee, by Norfolk.....	Thomas Hazlett.....	----- Sacramento

Position at Starting.	Position at Close.
1. Mileta	Belle
2. Jubilee	Jubilee
3. Belle	Mileta

Time—1:44½.

THIRD DISTRICT AGRICULTURAL ASSOCIATION.

269

RACE No. 9—TROTTING.

For four-year olds. Purse, three hundred dollars. One mile heats, best three in five, to harness and rule. Premium: First horse to receive one hundred and eighty dollars; second horse, ninety dollars; third horse, thirty dollars.

Name and Pedigree of Horse.	By Whom Entered.	P. O. Address.
Fred Arnold, by Nephew.....	W. Johnson.....	Stockton
Hazel Kirke, by Brigadier.....	J. B. McDonald.....	Marysville
Adair, by Electioneer.....	W. F. Smith.....	Sacramento
Telegraph, by Tilton Almont.....	J. F. McIntosh.....	Chico

Position at Starting.	Position at Close.			
1. Fred Arnold.....	Adair.....	1	1	1
2. Hazel Kirke.....	Hazel Kirke.....	2	2	2
3. Telegraph.....	Telegraph.....	3	3	3
4. Adair.....	Fred Arnold.....	4	4	4

Time—2:32½; 2:35; 2:30.

SATURDAY, SEPTEMBER 1st.

RACE No. 10—RUNNING.

Two and one quarter miles dash. Entrance, fifty dollars; forfeit, twenty-five dollars; three hundred dollars added; second horse to save entrance money.

Name and Pedigree of Horse.	By Whom Entered.	P. O. Address.
Jim Douglass, by Wildidle; dam, by Norfolk.....	George Howson.....	Sacramento
Maria F., by Leinster; dam, by Flush.....	John Mackey.....	Sacramento

Position at Starting.	Position at Close.			
1. Maria F.....	Jim Douglass.....	1		
2. Jim Douglass.....	Maria F.....	2		

Time—4:09½.

RACE No. 11—TROTTING.

Special purse of two hundred dollars, given by J. W. McIntosh, for all Singleton and La Harpe yearling colts. One mile heat. First colt to receive one hundred dollars; second colt, seventy-five dollars; third colt, twenty-five dollars.

Name and Pedigree of Horse.	By Whom Entered.	P. O. Address.
Ben T., by Singleton; dam, by Harkaway.....	Charles Sherman.....	Chico
Sunrise, by Singleton; dam, by Volcan.....	G. B. Simpson.....	Chico
Starlight, by Singleton; dam, by Blackbird.....	C. L. Denman.....	Chico
Delight, by Singleton; dam, by Volcan.....	J. T. McIntosh.....	Chico
Willie P., by Singleton; dam, Sallie, by Butte.....	J. F. Sheaffer.....	Gridley

Position at Starting.	Position at Close.			
1. Delight.....	Ben T.....	1		
2. Starlight.....	Delight.....	2		
3. Sunrise.....	Starlight.....	3		
4. Millie P.....	Sunrise.....	4		
5. Ben T.....	Millie P.....	5		

Time—3:34.

RACE NO. 12—TROTTING.

Agreed trotting, for twenty-five dollars a side, and twenty-five dollars added by the Society. One mile heats, best two in three.

Name and Pedigree of Horse.	By Whom Entered.	P. O. Address.
Roanoke, unknown.....	Charles Sherman.....Chico
Skylark, unknown.....	Mr. Hines.....Stockton

<i>Position at Starting.</i>	<i>Position at Close.</i>
1. Roanoke.....	Roanoke..... 1 1
2. Skylark.....	Skylark..... 2 2

Time—2:51; 2:46.

RACE NO. 13—RUNNING.

Matched running. One half-mile dash. Ten dollars a side.

Name of Horse.	By Whom Entered.	P. O. Address.
Rob Roy, unknown.....	F. Sill.....Red Bluff
Lady Geiger, unknown.....	J. L. Geiger.....Chico

<i>Position at Starting.</i>	<i>Position at Close.</i>
1. Rob Roy.....	Rob Roy..... 1
2. Lady Geiger.....	Lady Geiger..... 2

Time—0:55.

TRANSACTIONS
OF THE
FOURTH DISTRICT AGRICULTURAL ASSOCIATION

For the Year 1883,

Composed of the Counties of Sonoma, Marin, Solano, and Napa.

OFFICERS OF THE ASSOCIATION.

JAMES McM. SHAFTER.....	President
WILLIAM E. COX.....	Secretary
LEE ELLSWORTH.....	Treasurer

DIRECTORS.

J. McM. SHAFTER.....	Olema
A. P. OVERTON.....	Santa Rosa
T. H. INK.....	St. Helena
JAMES SAMUELS.....	Healdsburg
S. S. DRAKE.....	Vallejo
WILLIAM T. COLEMAN.....	San Rafael
WILLIAM ZARTMAN.....	Petaluma
H. MECHAM.....	Petaluma

REPORT.

PETALUMA, December 1, 1883.

To the honorable the State Board of Agriculture:

GENTLEMEN: The Directors of the Fourth District Agricultural Association submit this, their report of the transactions of said Association, for the year ending this date.

W. E. COX, Secretary.

RECEIPTS AND EXPENDITURES.

<i>Receipts.</i>	
Received from sale of old grounds	\$6,143 25
Received from bills payable	5,000 00
Received from sale of tickets	4,528 90
Received from sale of privileges	1,811 80
Received from entrance fees to races	1,660 00
Received from sale of grand stand tickets	794 80
Received from sale of private stalls	315 00
Received from cancellation of warrants	243 75
Received from hacks and 'busses	178 00
Received from rent of old ground	53 00
Received from tax refunded	32 75
Received from fine	25 00
Received for a special premium	2 50
Overdraft	\$20,788 75
	2,132 74
	<u>\$22,921 49</u>
<i>Expenditures.</i>	
By overdraft December 1, 1882	\$76 28
Paid for land	7,000 00
Paid bills payable	5,000 00
Paid purses	4,057 50
Paid premiums	1,933 00
Paid for labor	1,738 00
Paid interest	706 05
Paid for hay and straw	447 70
Paid for lumber	497 14
Paid for printing	316 00
Paid for taxes	256 34
Paid for music	180 00
Paid for water	150 00
Paid for hardware	128 90
Paid entrance fee returned	90 00
Paid for insurance	90 00
Paid National Trotting Association	56 00
Paid for decorations	39 98
Paid for plumbing	37 70
Paid Marshal's expenses	29 00
Paid for annual address	25 00
Paid for blacksmithing	23 85
Paid for stamps and envelopes	18 90
Paid for stationery	10 20
Paid for expressage	7 25
Paid for drain tiles	6 70
	<u>\$22,921 49</u>
December 1, 1883, by overdraft	\$2,132 74

ANNUAL ADDRESS

DELIVERED BY REV. E. R. DILLE BEFORE THE AGRICULTURAL SOCIETY,
AUGUST 30, 1883.

MAN'S SOVEREIGNTY OVER NATURE.

If I were asked what thought a visit to your beautiful Pavilion suggests most vividly to mind, I should answer the thought of the "sovereignty of man over nature," for everywhere around me I see the tokens and trophies of that sovereignty. Upon the marching seasons and the timely rains, upon the hidden wealth of mountains and the vaster and more accessible wealth of the generous soil, upon the forest, the flock, and the field, man has levied tribute that he may exhibit here the spoils of his conquest and show all the forces of nature chained to his triumphant chariot wheels.

After God made this beautiful world, wrapped it round with sweet air, bathed it with his sunshine, curtained it with the morning light, and sent it singing and shining through the heavens in the fresh and glowing beauty of its natal hour, while "the morning stars sang together and the sons of God shouted for joy,"—after this was done there was a pause in the work of creation.

God had stocked the earth and air and sea with mighty forces. There was the vital, the vegetative force, the mysterious power of life changing inorganic matter into organic, and transforming with wondrous alchemy the elements of earth and air into fruits and herbs and plants for the food of the animal creation.

There was coal locked up in the mountains, steam shut up in the water, and electricity sleeping in the thunder-cloud. There were winds and waves waiting for their lord. There were the animal tribes without king or ruler. God had filled the world with power, and now He wants a king to rule this new realm. And so He made man in His own image to have dominion over the works of His hands and put all things under his feet—commissioned him to be His viceroy over all the forces of nature and all the lower orders of creation.

At first glance it would seem that man has but little qualification, adaptation, or fitness for handling all the great forces that are about us, and bending them to his own will. What a little creature man is! The earth upon which he lives is but a shaving swept out of the creative workshop—but a speck of dust thrown off the whirling lathe of creation in making larger worlds. The sun alone is one and a half million times larger than our earth. And upon this globular speck (so small a part of the universe that it might take an angel with a microscope one thousand years to find it) what is man? Smaller in proportion to the solar system than a diatom to the Pacific Ocean—weaker for his size than any other animal is this lord of creation.

To raise a stone weighing two hundred pounds five feet is a task beyond his strength. Would he raise half a ton fifty feet he must call to his aid an engine and half a dozen other men, and then, with elaborate contrivance of derrick and block and tackle and ropes and pulleys he succeeds by painful labor in lifting it to its place at the imminent risk of being crushed by his own machinery. And yet, small as man is, he is born to the purple. He shows this even in his infancy. See that babe! What an imperious little despot it is, as though it "bore upon its baby brow the round and top of sovereignty." From the first it royally appropriates all that is best on earth of love and sacrifice and service. Woe to the luckless wight who rebels against the young autocrat of the nursery! He lays staid matrons and dignified men under tribute to furnish him amusement, and makes age itself wear the cap and bells of a jester in his mimic court. By the time he is a year old this young lordling of creation deliberately seeks to subjugate his father and mother, and succeeds oftener than he ought in "bossing the ranch." He feels already stirring within him that regal spirit that belongs to creation's anointed sovereign and lord. One by one the cat, the dog, the horse, the soil, the sea, steam, electricity—all the forces of nature shall wear his livery and do his bidding. Prince that he is, he is practicing in the nursery the arts and airs of government.

Man received his commission, his letters-patent as viceroy of nature at creation, but he is only just coming into his kingdom now. "God gave the earth to the children of men," as he gave Canaan to Israel. He deeded the land to them, but they had to conquer it. And, as that ancient people were six hundred years conquering and subduing their inheritance, because their vices and their ignorance so weakened and enervated them, so man has been nearly six thousand years achieving the conquest of nature, and learning to wield the scepter God has placed in his hand. In fact, he has not subdued it yet—the subjugation of the material world has only just begun. Nature is exceedingly opulent in her forces and resources, but man has gained but an imperfect mastery over them. He has been too idle to learn her secrets, too much enfeebled in mind and body by his vices to assert his sovereignty, and too much occupied with war and bloodshed to cultivate the arts of peace. He has abdicated his throne, and sold his birthright for a mess of pottage. Just in proportion as Christianity has put down the vices of man and taught himself government, has he in his turn subjugated the forces and elements about him. And yet he has only taken the outposts and frontiers of his domain, and there remaineth much land to be possessed. He has only entered the vestibule of the sanctuary of Nature. Her innermost vails have not yet been lifted. The forces he has subdued are only partially tamed, only imperfectly broken to harness. His best steam-engine wastes eighty-five per cent of the power of the steam, and his most perfect mechanical contrivance loses by friction one half of the power applied. Who can doubt that the next fifty years will witness far greater triumphs of mechanical and inventive skill than the last fifty have seen. These wonders are but a prophecy, and a hint of the solution of Nature's ultimate secrets and the utilization of her forces which are in store for mankind. As the dreams of the past are the actualities of the present, so the achievements of the future will surpass our wildest flights of imagination. Forty-two years ago Professor Low, of St. Joseph College, Bardstown, Kentucky, was com-

mitted to the insane asylum because he predicted that a railroad would be built from the Atlantic to the Pacific. We may imagine that there is nothing left to be done, but as Emerson said, "Nothing has been done by men that cannot be better done." I have no doubt that there are powers in nature more swift than the silent feet of electricity which now speed along those webs of iron which are woven like a network of nerves over all lands and under all seas. Some power greater than the steam-engine will yet be discovered which will carry products from producer to consumer in the twinkling of an eye, and bring the families of man together in such close neighborhood and brotherhood as to make possible "that parliament of nations, that federation of the world," of which Tennyson prophesied. Wait until man can handle steam not only as he can to-day, but in its superheated condition, in which it possesses the tremendous force of dynamite itself. The time will come, I suppose, when the Gatling and Parrott guns and the Winchester rifles of to-day, supplanted by more perfect arms, will retire to rest and rust beside the flint-lock muskets and the crossbows of antiquity. Some marvel of mechanism will yet supplant the sewing-machine, and clothe our descendants with more than the glory of Solomon, and with scarcely more labor than that put forth by the lilies of the field, which toil not, neither do they spin. The steamship, it may be, will yet rot at the dock, set aside by airships, those "argosies with magic sails, pilots of the purple twilight, dropping down with costly bales," and the locomotive be cast aside with the creaking and toiling prairie schooner steered by the Argonaut of '49 across the wind-swept desert, cast aside to make room for some pneumatic or electric railway.

Take for example the solar energy which, by evaporation, draws up three thousand million tons of water three and one half miles every minute, expending a force equal to two thousand seven hundred and fifty-seven million horse-power. Ericsson's solar engine condenses the solar rays on a space ten feet square, and enough force is generated by them to run an engine of eight and one half horse-power ten hours a day. Enough solar energy is being wasted all around us to do all the work of the world, and man will yet hitch his wagon to the sun and give it harder work to do than bleaching linen and painting pictures with its swift pencil of light for him. Wait till some cheap and easy method of decomposing water is invented. You know water is composed of about eight parts of oxygen, a supporter of combustion, and one part of hydrogen, a highly inflammable gas. By electrolysis the chemist decomposes water into these two gases. Let the scientist who "knows enough to set the river afire" discover some cheaper method than electrolysis, and lo! the ocean steamer will pump her fuel from the sea she rides, and while water converted into steam shall drive our railway engines, water transformed into fuel will feed their furnaces. Some fanciful genius recently predicted that man would yet utilize the force that produces earthquakes for blasting purposes. The same genius predicted that some cute Yankee would utilize the fifty-six million horse-power wasted by the falling torrent of Niagara, while a stock company will make blast furnaces of Vesuvius, Mauna Loa, and Cotapaxi, and another company will issue stock for the enterprise of using the Aurora Borealis to light the cities of St. Petersburg, Stockholm, and London. You know it is the Gulf Stream that prevents England having the climate of Labrador. Who knows but that if war ever again breaks out

between Jonathan and John Bull some American De Lesseps will cut a canal right through Central America, turn the Gulf Stream into the Pacific, and freeze England into an iceberg?

Do you say all this is fanciful? It is no more fanciful than it would have seemed fifty years ago to predict that men would travel by steam, talk by lightning, and make that subtle and terrible spirit of the air, electricity, furnish the motive power to our machinery. I believe that the progress of Christianity will yet bring about a moral millenium. So the progress of civilization, science, and art are destined to produce a physical, a material millenium. The time is to come when our perfected race, redeemed from ignorance and sin, shall rule right royally over their lower natures and over all the forces and elements of matter. The Bible predicts that moral and material millenium when mind shall be enthroned above matter everywhere. Then, the primal curse removed, "instead of the thorn, shall come up the fir tree, and instead of the briar, the myrtle tree. Then gold shall be cheap enough for paving stones, and pearls be built into the city walls." In that golden age to come, when men shall beat their swords into plowshares and their spears into pruning hooks, when the wilderness shall blossom as the rose, ignorance, poverty, toil, vice, and misery shall be known no more. I repeat, that man has only captured the outposts of nature. He has only landed on Plymouth Rock and the whole continent is before him.

What is the first province man must conquer in his march from the cradle to the throne? Himself, his lowest nature. The soul must dominate the body. The soul must sit enthroned within and sway the little empire I now embrace within my two arms. I must subjugate this little world before I seek other worlds to conquer. The rebellious appetites and passions, desire, ambition, pride, the unruly temper, and the unruly tongue, must be held under control, for if they get the upperhand there will be such anarchy and ruin as when the criminal classes ruled Paris during the Commune and the Reign of Terror. Ah, what battles are fought on this miniature battlefield! Marathon, Waterloo, Shiloh, the Wilderness, will not compare with them, either for the fierceness of the conflict or its far-reaching issues. These are but sham battles to those the true man must fight and win over his lower nature. And this conquest of the body must precede the conquest of outlying nature. See that skilled artist at the piano, or that deft craftsman at the bench, or that singer sweeping with the magic wand of song all the keys and chords of the human heart. They illustrate to us the power of mind over body. They teach us what obedient servants the organs of the body may become. And as in the realm of art, so may it be in that of morals.

But I come now to speak of the various spheres in which man asserts and maintains his royal prerogative as lord of creation.

One of the sublimest passages in the sublimest book in the world tells how the ocean lay in God's hand like a dewdrop in the heart of a rosebud, until He carved for it a dwelling place in earth's deep bosom, and there set it to be the everlasting mirror of his own infinity. Then He appointed its metes and bounds, saying, "Hitherto shalt thou come, but no farther; and here shall thy proud waves be stayed." It is a sublime thought that God conquered old Ocean then and shut it up in its prison-house.

But man has conquered the ocean. He has made it the pathway of

his commerce. By the aid of the mariner's compass he has plowed its bosom with a million keels, and reaped from that plowing a golden harvest, and by the aid of science and steam he has discovered Elisha's ancient miracle and made the iron to swim. To-day the waves acknowledge their lord in him as they did of the old when they bowed their white crests and crouched at the feet of their Maker on Galilee's lake. By the aid of dikes and breakwaters and canals, man has snatched a kingdom—that of Holland—from Neptune, and by the Atlantic cable he has made the dark, unfathomed caves of ocean a whispering gallery between two worlds. Yes, "the mysterious depths of ocean are to-day only a path for thought to travel through, winged by the lightning and guarded by the billow." Of old it was fabled that Neptune ruled the ocean with a trident for a scepter. The ancient fable has become reality; Morse is our modern Neptune and his trident is a single wire.

I have already spoken of the tremendous forces that are all about us. Why, each drop of water is the sheath of forces mighty enough to charge eight hundred thousand cells in a galvanic battery. The glistening bead of dew from which the daisy drinks, and which a sunbeam may dissipate, is the globular compromise of antagonistic powers that would shake this building if set free. Take the force expended in evaporation to which I referred a few minutes ago. Think of the expenditure of mechanical force required to water your little city's streets! What pumping and tugging by that old horse down there by the creek! (I always wondered if he wouldn't take more interest if he were made a stockholder or partner in the business. He never seemed to throw his soul into it, as it were.) And then what tramping of horses and sprinklers day by day. But nature has taken a contract to sprinkle the globe, and how much better she does it with the powers at her command! The sun looks steadily on the ocean, and its beams lift lakes of water into the air, tossing it up thousands of feet with their delicate fringes, and carefully eliminating every grain of salt from it before they let it go. No granite reservoirs are needed to hold in the Lake Merced of the atmosphere, but the soft outlines of the clouds hem in the vast weight of the upper tides that are to cool the globe, and the winds harness themselves as steeds to those aerial water carts and whirl them along through space, disbursing their rivers of moisture from that great height so gently as not to crush a violet by their fall.

Now, all our modern material civilization is the result of the mastery of these natural forces.

One man can make as much flour in a day as one hundred and fifty could one hundred years ago. One woman can make as much lace as one hundred could then—and wear it, too! It took as many months to refine sugar fifty years ago as it does days now—formerly it took six months, now it is done in forty minutes. In the old days when the formula for fever was "take a pint of blood and a quart of physic," they used to destroy sensation in a limb to be amputated by immersing it in boiling oil! I should suppose that amputation would be a pleasant sensation compared to that. Now our surgeons freeze the part to be operated on with ether spray, and saw off an arm or leg while you are reading the morning paper.

By and by, perhaps they will administer anesthetics when they present their bills. That would indeed be a sweet boon to suffering humanity!

As man has learned the laws and conquered the forces of nature, alchemy has given place to chemistry, astrology to astronomy, the whale oil lamp to the gas-burner, and the gas-jets hide their ineffectual fires before the electric light which makes the night even as the day.

We talk about the change produced by the railway and the telegraph, but the less conspicuous revolution in domestic life is quite as beneficial and as marvelous. Go back with me to the time of Cicero and I will suppose somebody here is his guest at his palace on the Palatine. You sleep on a marble couch with a block of wood for a pillow. On rising your feet rest on cold marble slabs, for carpets never occurred to anybody till the race had been plodding along about five thousand years. You have no stockings to put on, for nobody had yet thought of them in Cicero's time, nor for a good many hundred years after. You look for pins. The idea of pins never entered the heads nor their points the bodies of the first one hundred and fifty generations of our race. No glass windows admit the light to Cicero's palace, and think of it, no mirror in the house but a metal one! Did you ever when camping out make your toilet before your reflection in the bottom of a tin pan? There is no chimney to conduct the smoke away in Cicero's palace. Well, you come to breakfast. What! No tea, coffee, nor sugar? No! But here is venison. "Will you give me a knife and fork?" Forks? A Roman never saw one. Fingers were made about five thousand years before forks. Cicero, with the only knife on the table, cuts off the meat in bits, which the guests put where it will do the most good, with their fingers. Breakfast over you will rest while Cicero's daughter Julia spins the stuff for her own gowns. But there is not a lounge, or sofa, or chair in the house—only a few stone stools about as comfortable as tombstones. There is no watch or clock to tell the time, no magazines or books, except a lot of rolls tied up like music holders. You open one; it is one hundred feet long and begins: *Quousque tandem abutere, Catalina, patientia nostra?* Wherefore is Cataline always to abuse our patience? You sit down to write. They hand you a sharpened stick of wood for a pen, and a piece of sheepskin on which to write a dainty note to your lover, and you send your letter to him by a courier who goes on foot thirty miles a day. But you need not go back so far to find what the world would be without modern inventions. Our own mothers drew water with a well-sweep; cooked by an open fire; stitched and wove and spun their lives away. But to-day we have gas and water; the sewing machine in the work room, and the piano in the parlor. We have patent baby incubators and nursing bottles; patent baby jumpers; patent carts to ride in; stoves to cook on; bedsteads to sleep on, and patent caskets to be buried in. We live as much in our thirty-three years as the antediluvians did in nine hundred and sixty-nine years.

I come now to speak of man's conquest of the soil.

Said Daniel Webster: "There are three pillars upon which society rests: Agriculture, Manufactures, and Commerce, but the greatest of these is Agriculture." The king is fed by the field, without it the food of man is limited to the flesh of wild animals and the spontaneous production of the earth. Without it commerce and manufactures could not exist, and the arts and sciences would be unknown. By the culture of the soil men are able to produce more than they require; so that the remainder are enabled to turn their talents and

ingenuity to some other useful calling, the products of which may be given to the farmer in exchange for food. Here then is the division of labor which is at the foundation of all social order and civilization, and which is adopted more and more as communities become enlightened and prosperous. Without such distribution of pursuits little wealth could be accumulated by nations or individuals. The poorest man in this neighborhood is rich compared with what he would be if he could own one hundred square miles of land and live on it alone with his family, cut off from all privileges of society and barter, and having only what he could produce and manufacture with his own hands. Such a man could only produce the bare necessities of life. His food must be the spontaneous products of the soil and the spoils of the chase, his clothing must be the skins of wild animals, his shelter a rude hut, and his only beverage water. But as the productions of the soil are increased a minute division of labor is made possible and society takes on that complexity of organization which characterizes a high state of civilization.

Again, in no other pursuit does man stamp so deeply upon the works of God, his image and superscription, as in this. He modifies the climate in all lands. The increase or diminution of vegetation has a large influence on climate. Removing forests decreases the rainfall in a given region, and planting trees increases it. In former times Europe was much colder than at present. In the fifteenth century the waters of Italy were much colder than now, and the Seine in France, and other rivers in that latitude, were frozen in Winter, while the Thames froze so thick that the inhabitants crossed from London to Southwark, and oxen were roasted whole on the ice. The clearing of the forests increases the dryness of the air and raises the temperature. Regions of Asia and Northern Africa, which in ancient times were the granaries of Europe, fertile and populous, were made deserts by the clearing of the forests. On the other hand, in parts of Scotland and Southern France the climate has been modified, and the droughts have been effectually prevented by the planting of forests. In parts of Lower Egypt rain was formerly unknown. But vast plantations have been planted there, covering many square miles, and started by the aid of irrigation, and copious rainfalls are the result. Again, the farmer modifies the climate by draining lakes and morasses, and reclaiming the tule and other waste lands. Intermittent fevers have disappeared from England, chiefly, no doubt, in consequence of the high cultivation and careful drainage of the land; while two hundred years ago they were as prevalent in England as in any of our fever and ague regions in the West. Cromwell, Milton, and Bunyan died of intermittent fever and blood letting, as did our own Washington. Fever and ague lingered in the fens of Lincolnshire until the commencement of this century; but they have been drained, and that type of disease is now unknown in England. Hence, the farmer, and not "Old Probabilities," is the true clerk of the weather. When he plants a tree for fruit, timber, shade, or decoration, he creates the atmosphere in which he and his family are to live. And while he, by underdraining, reduces otherwise useless soils to fertility and fruitfulness, he banishes disease and prolongs the life of himself and his neighbors. Thorough cultivation, drainage, and decoration, mean more than dollars and cents; they mean health of body, and refinement of mind as well. It is the Divine order that utility and beauty should go hand in hand. The

earth, like the human countenance, has its expressions. There is upon it the wild and untamed luxuriance of nature, or the softness and elegance of culture. Now its countenance is gloomy, savage, and terrific, and now it is mild, ethereal, and lovely. This face and aspect of nature it is the high prerogative of man to change. Her features are molded into lines of softness and beauty by the plastic hand of toil.

What a contrast our own State presents to the Knights Templar who visited it lately, to that presented to the pioneer of '49. True, the general contour, the outlines of the coast, and the lines of the mountain ranges are the same, but the face of your villages are so changed that if some pioneer should wake up from a Rip Van Winkle sleep of thirty-four years, he would not recognize them, with their fields of flowing grain, instead of wild mustard, their orchards with richly laden trees, their lovely gardens, and tasteful homes, and populous towns. The fact is, that to the farmer is given the high honor of finishing and improving the Creator's work. He made the sea, and the mountains, and the heavens as he would have them, complete at the first. But the earth, with its animal and vegetable tribes, he only made in the rough, and left man to put on the finishing. It was Adam's skill and labor that made Eden, and when he left it went back to wild land. Every acre of opulent swamp and bounteous tule, from which coarse grasses are banished, and frogs, snakes, turtles, and mudhens driven, is really so much land created; and so is it creation when fifty acres is made as productive by deep plowing and fertilizing as one hundred is by "scratchiculture." And I want to say here that California farmers seem to have but imperfectly learned the aphorism, "Feed the land and it will feed you." You remember how Victor Hugo, in *Les Misérables*, tells the Parisians that the sewerage of the great sewer of Paris would feed all Paris, if used as a fertilizer, instead of being carried to the Seine and to the sea? Japan is about as large as England and Ireland, and only half of it is fit for tillage. It has a larger population than Great Britain and Ireland. And yet while England imports food annually, at a cost of millions of pounds, Japan exports grain every year. They have kept up the soil by using every available fertilizer in the kingdom, through ages that stretch back to the time of Moses; whereas, the soil of California, rich as it is, will not stand our present cut-throat system of agriculture one hundred years. One half of the twelve million acres of New York State have been almost ruined by "skinners," who take everything from the soil and give nothing back. A great deal of farming land in the Eastern States has been exhausted and the farmers have come West. But, farmers of the Pacific Coast, there is no West for you! Our large farms and our continuous croppings without rotation, especially where we have no Winter nor snow to rest, fallow, and mellow the soil, and our almost universal neglect of fertilizers is, it seems to me, the threefold peril to our agricultural future. Your cattle have mouths and stomachs and must be fed, and those that have been best fed and cared for, other things being equal, will carry off the premiums on Saturday. But a plant has a thousand mouths, and every one must be fed, and every one leaves less for the others. Treat the soil as a factory. If you want a fabric, furnish the warp and woof and you shall have it, but don't kill the goose that lays the golden eggs.

But to return to my thought, that all our domesticated animals and plants are trophies of man's sovereignty and creative skill. The sheep in its natural state has coarse hair like that of goats. The wild horse is of the mustang type and size. The wild hog is a most formidable and ferocious beast, with an anatomy as pronounced as that of a San Francisco car horse. What was the potato in its natural state? An acid, poisonous root. Go and look at those "spuds" in the Pavilion and see what man has made out of that unpromising, raw material. Man discovered, ages ago, a mean grass, totally devoid of nutritive qualities, having a bitter kernel like chess or cheat, but he trained that plebian cereal, until to-day, as it rolls its billows of gold in harvest, we hail in wheat the queen of plants and the staff of life. The apple, which to-day is among fruit what the cow is among domestic animals, is descended from the sour, knotty, wild crab, and to-day we have apples in California golden as the fabled ones of the Hesperides, luscious and inviting as the fruit that tempted Eve. A visiting Sir Knight, in San Francisco, the other day was passing a fruit stand where some extra large watermelons were exposed for sale. (If Adam and Eve were colored people, as Professor Winchell asserts, a watermelon was probably the fruit that beguiled them.) Well, this Knight was of a waggish turn, and so, with an air of disappointment, he said, pointing to the melons, "Are your apples no larger than this in California?" "Apples?" said the Italian lady from Cork, whom he addressed, "apples? thim's huckleberries!"

Then all our delicious grapes have been developed by human skill from the wild grape of Europe, which is inferior to our California wild grape, and speaking of grapes I don't think our California grapes are done yet. The plums and pears and cherries you raise hereabout are. But our peaches need a little more sunshine in them, and when I look at our strawberries and our grapes I am like the boarder who said to his landlady, "a little more strength in the tea, ma'am, and a little less in the butter." And so I say a little more sugar in our strawberries, a little less in our grapes! The excess of sugar in California's grapes makes an excess of alcohol in her light wines, and the excess of acid in our strawberries discounts them terribly. But that will be remedied by and by.

And now a closing word to the dignity of this pursuit. Well has Emerson said: "We look upon the farmers with reverence and respect, when we remember what powers and utilities he so meekly wears." Plain in manner and dress, he would not shine in palaces, but set down beside him the drawing-room dandy, who is only a whiskered essence and an organized perfume, and the "dude" shrivels into nothingness while the son of the soil towers in manly stature like one of the Homeric heroes. I know there is a tendency among farmers' boys to look wistfully to the city or to the professions as offering better inducements to honorable ambition, and their manual labor seems to be the abhorrence of many. They will clean spittoons, measure tape, take a third assistant clerkship in a junkshop, peddle sewing machines or liver pads, rather than do honest hard work. A farmer's boy wrote to Horace Greeley a few years ago asking his advice about leaving the farm for a professional career, and received the following answer: "Dear Sir: I judge by the number of lawsuits and deaths that there are three times as many lawyers and doctors as the country needs, and by the price of flour, butter, and beef not

half enough farmers. I advise you to produce potatoes rather than pills or pleas." The Lord deliver you from boys and girls who are ashamed of the farmer's vocation and afraid to work. The rearing of such a family is a worse speculation than Mr. Beecher's hogs were on his model farm at Peekskill. He bought the original hog for a dollar and a half, fed him forty dollars worth of corn, and then sold him for about nine dollars. He said that was the only crop he ever made any money on. He lost on the corn but made seven dollars and a half on the hog, and as for the corn, he didn't expect to make anything on the corn anyway; and then he had the excitement of raising the hogs whether he made anything on them or not. So of these ornamental sons and daughters who think a professional or city life superior to that of the farm—all that is made by rearing them is the excitement of the thing, and it is terribly exciting too sometimes when the farm has to be mortgaged to pay their tailor or millinery bills.

One way it seems to us to induce the boys to stay on the farm and the girls to be attached to farm life, is for every rural home to be made as attractable as possible. How many farm houses in California stand out white, glaring, and ghastly as a heap of bones on the desert, with no shrub, shade tree, lawn, or flower garden to remove its barrenness. Let not the farm be a mere workshop with only sordid associates. Make your home too beautiful and too sacred and too permanent to be tempted from you by a stranger's money.

Build up homes that you and your children will never part with, houses around which shall cluster a thousand dear associations, making them to you and to them the dearest spots on earth. In such homes will all the domestic virtues blossom and bear fruit, and from them blessed streams of influence flow out through whole communities. I close with the sentiment of a poet farmer:

"No dread of toil have we or ours;
The more we work the more we win;
We know our worth, we weigh our powers.
Success to trade, success to spade, and the wheat that's coming in.
And joy to him who o'er his task
Remembers toil is Nature's plan,
Who working thinks, and never sinks
His independence as a man."

The Directors tender their thanks to the following persons for services rendered: To Mrs. J. Purrington for a fine display of hops, grapes, and fruits, sent from Sacramento; to Mesdames H. H. Cooper, E. Hopes, N. M. Hedges, J. Fritsch, M. Schlosser, and Professor E. S. Lippitt for use of plants during the week; to J. B. Hinkle, Marshal, and his Aids, George Charles, of Humboldt, F. M. Collins, of Liberty, E. S. Jordan and H. S. Hasbrouck, of Two Rock, for assistance rendered the officers during the week, and last though not least to the district newspapers for their valuable assistance in keeping our Fair before the people.

This is to certify that the foregoing itemized statement contains a full, true, and complete account of the premiums awarded by the District Agricultural Society No. 4, of the State of California, at its last meeting held at Petaluma, August twenty-seventh to September first, inclusive, and that the said sums were actually paid as such premiums by said Society to the several parties therein named.

Witness our hands and the seal of the said Society this — day of September, 1883.

[SEAL.]

J. McM. SHAFTER,
President.

Attest: W. E. Cox, Secretary.

REPORT OF RACES

BY E. A. DeCAMP, SECRETARY OF THE SIXTH DISTRICT ASSOCIATION.

Our community having experienced an era of unusual prosperity, subscribed quite promptly to our guarantee fund, and were prepared to expect a corresponding display at this, our Fourth Annual Fair.

Owing to the seeming impossibility of securing quarters, an horticultural or Pavilion display was almost a forlorn hope. The Society grounds, although spacious, were out of repair, having for years been worse than tenantless; really the outlook for 1883 was anything but encouraging. Unexpected business calling the majority of our Board from this locality, made the duties of the untiring minority onerous in the extreme.

They proved themselves equal to the emergency. While they have no financial surplus to offer, yet the groundwork for perpetual Fairs in the future has been established, and deemed as sufficient remuneration for their efforts. The attendance at the Pavilion was more pronounced than the efforts of the exhibitors, which made that department nearly a moneyed success. The Park boasts of as fine a track as can be found on the coast. Everything is in order and in reasonable repair, and liable (in charge of the present lessees) to remain so.

By correcting a few abuses of the ticket privilege, and a hearty coöperation of Directors and officers, future Fairs can be conducted without aid excepting the natural patronage of the public.

Twenty races advertised, having filled on the fifteenth ultimo, the Sunday preceding our opening day, found every shed filled and lines of stock still coming, and more to come; all combined, compelled the employment of all available carpenter force to protect the unusual demand and provide even places of safety without regard to comfort.

At the Pavilion the same bustle was apparent on opening day. Although the displays were apparently small the space was well occupied, and Superintendent Garey made a creditable display on the evening of opening day.

At the Park, Monday, October eighth, although rather windy, the day opened clear and cool, yet sufficiently warm to work horses to advantage; horsemen to find the track from what was one of the poorest changed to one of the best.

The introduction of the Hon. H. M. LaRue, President P. A. Finigan, and our own General E. M. Sanford, as Judges, sent a feeling of confidence throughout the community, all of which was increased by the appearance of Oscar Macy as Clerk of the Course, and Colonels Mott and Simmons as timers. The outlook for good judgment was firmly established.

The attendance was good and the knowing ones declared their inability to name the winning horses.

FIRST DAY.

The first race was a special trot between Baldwin's St. James, Rose's g. g. Centre, and Dunham's b. g. Bullet. Pools sold readily, ten dollars for St. James, five dollars each for the other two. St. James, although running the first heat, was so closely pressed by the gray that it was evident he was the winner, which was shown in selling, he bringing fifteen, to six for the other two. With little effort he won the second, third, and fourth heats and race.

SUMMARY.

Special trot for named horses. Mile heats; best three in five. Purse, \$300.

L. J. Rose names g. g. Centre, by Sultan; dam, Belleview Maid	2	1	1	1
E. J. Baldwin names b. g. St. James, by Champion	1	2	2	2
Ed. Dunham names b. g. Bullet, by Echo	3	3	3	3

The second was a running race for district two-year olds, half mile dash; one of the series of colt races that had attracted much attention, having filled with ten entries. This was signalized by Mr. Finigan assuming the role of starter; a satisfaction to owners, namers, and jockeys. Pools opened with the Baldwin filly, by Rutherford, a clear favorite, bringing even money against all the balance. Five colts appeared as starters, Harry Rose taking the pole, Baldwin filly next, St. David third, Minnie Rathburn fourth, Baywood outside.

After the usual labor, they were got off together by a nose; Baldwin filly second, and St. David a close third.

SUMMARY.

One half mile dash for district two-year olds. Purse \$200.

L. J. Rose names s. g. Harry Rose, by Rutherford	1
E. J. Baldwin names b. f. —, by Rutherford	2
Machado Bros. name s. s. St. David, by Hockhocking	3
Dan. Rathburn names b. f. Minnie Rathburn, by Sacramento	4
T. C. Warden names b. s. Baywood, by Hardwood	5

Time—0:50.

The third event was a running race, free for all district horses; mile dash; closed with four entries. All appeared as starters. Pico & Estudillo's Klipspringer bringing ten dollars in the pools, to fifteen dollars for the balance, which included Baldwin's ch. f., by Grinstead, out of sister to Clara D; Forster's s. s. Griffin, by Rutherford, and Charley Thomas's s. s. Balboa, by Norfolk, all showing the bluest of blood, and each looking a veritable racehorse.

When the blanket was pulled from Klipspringer a burst of admiration arose from the crowd, and seconded by the pools jumping to seventy-five dollars, against sixty dollars for all the rest. One or two false starts, and all got off in close order, the favorite coming under the wire first, Baldwin filly at his shoulder, the others side by side, a couple of lengths behind.

SUMMARY.

Mile dash for district horses. Purse, \$300.

Pico & Estudillo name blk. s. Klipspringer, by Wildidler	1
E. J. Baldwin names ch. f. —, by Grinstead	2
Charles A. Thomas names s. s. Balboa, by Norfolk	3
W. A. Forster names s. s. Griffin, by Rutherford	4

Time—1:45.

SECOND DAY.

The meritorious performance of opening day brought a large attendance; it was gala day indeed. Brave men and handsome ladies were numerous, and alike enjoyed the sport.

The first race was a trot for three-minute horses in the district, and closed with four entries, all appearing as starters.

Rose's s. g. Don Carlos became at once such a pronounced favorite as to bar him in the pools, which proved a wet blanket, judging from a betting standpoint. After the usual scoring a good start was effected, Carlos winning easily in 2:45, Hunter second, Hardman third, and R R distanced. Second heat was a repetition of the first. Hunter won the third heat, but the time was too fast, as Carlos took the fourth heat and race in the usual time and with ease.

SUMMARY.

District trotting, for three-minute horses. Three best in five. Purse, \$360.				
L. J. Rose names s. g. Don Carlos, by Del Sur	1	1	3	1
R. J. Blee names blk. g. Hunter, by Ky. Hunter	2	2	1	2
C. A. Durfee names b. g. Hardman, by Echo	3	3	2	3
C. R. Fickett names g. g. R R, by A. W. Richmond				dis.

Time—2:45; 2:37½; 2:37½; 2:37½.

Second race was running; one half mile and repeat; for graded horses in the district; closed with five entries. Before the horses were called, Dottie Dimple and Woodberry brought ten dollars each, to six dollars for the other two. Jennie G was protested on the grounds of pedigree and ownership. Taken under advisement, but Judges permitted the mare to run, their decision to affect the purse and not the pools. After numerous efforts and consuming much time a start was effected; Dottie Dimple inside, Jennie G second, Eclipse third, and Woodberry outside, Jennie winning the heat. The Judges, to save time, called up the trotters in the special race for Kenniston & Brazelton's Nellie Monroe, by Inca; Tempest, by Sultan, and Kate Bender. After the tiresome work of a dozen scores, a good start was made, Nellie winning the heat in 2:54.

The pools showed her a favorite, but the morrow had much to reveal; darkness had come. Two unfinished races, the stock parade, the ladies' ten mile race, added to the balance of a good programme, was a guarantee for a crowd.

THIRD DAY.

Wednesday, the third day, brought it, and as early as ten o'clock it did not require much stretch of imagination to carry one to Jerome Park. The parade was a success and will long be remembered by every lover of fine stock; it comprised more animals, worth more money, and possessing better blood, than had ever been collected within one inclosure in this part of the State before. The unfinished running race of Tuesday was first called. Jennie G's performance made the field, which included Eclipse, jump to favorite place, for fifty dollars to thirty dollars for both the others.

Jennie coming third under the wire on first heat disappointed her backers somewhat, but did not materially change the betting, as she got off easily, and won the next two heats.

SUMMARY.

District running for graded horses. One half mile heats. Two in three. Purse, \$250.				
H. L. Samuels names b. m. Jennie G., by Wheatley	3	1	1	
Hill & Gries name blk. m. Dottie Dimple, by Ben Wade	1	3	2	
Sanchez Bros. name r. g. Eclipse	4	4	4	
T. C. Warden names b. s. Woodberry, by Hardwood	2	2	3	

Time—0:49½; 0:51½; 0:50½.

Protest as to length of time in district sustained and purse given, first money to Dottie Dimple and second to Woodberry.

The unfinished trot was called; horses got off promptly, Tempest winning the heat easily in 2:51; Kate Bender second, Nellie barely saving her distance. Tempest took the third in 0:45, Nellie second, but it was too fast for her. Kate Bender took the fourth in 0:45½; Tempest third. Now hedging was in order, and Bender brought fifty dollars against twenty for Tempest. Kate Bender led the fifth at a fast gate, distancing the Inca mare in 2:43½. Tempest took the last heat in 0:45½, terminating the best trotting event of the week.

SUMMARY.

Special trot for named horses. Three best in five. Purse, \$200.				
F. M. Slaughter names b. m. Tempest, by Sultan	3	1	1	3 2 1
Dan. Payne names blk. m. Kate Bender	2	2	3	1 1 2

Time—2:54; 2:51; 2:45; 2:45½; 2:43½; 2:45½.

Third race, district trotting, 2:30 class, had closed with five entries. Only Dunham's Bullet and Maybury's Lady Washington appeared as starters. The mare commanded two to one in pools. She won the first heat easily; after losing the next two heats the Judges replaced Mr. Walters with Rose's driver, Walter Maben. She came in an easy winner, in 2:40 and 2:37½.

SUMMARY.

District trotting, 2:30 class. Purse, \$500.				
E. L. Maybury names b. m. Lady Washington, by Whipple	1	2	2	1 1
Ed. Dunham names b. g. Bullet, by Echo	2	1	1	2 2

Time—2:35; 2:35; 2:32½; 2:40; 2:37½.

Next was a running race, free for district horses; mile and repeat; closed with five entries. Baldwin's Grismer readily brought two to one for all the balance; at the call he was such a favorite as to bar him in the pool box; when Idler brought ten dollars to seven for Forster's Pele. Being no colts a start was easily made, the favorite winning easily in straight heats, Idler a half length in rear, Pele two lengths behind.

SUMMARY.

District running. Mile heats. Purse, \$400.				
E. J. Baldwin names s. g. Grismer, by Grinstead	1	1		
Kenniston & Co. name b. s. Idler, by Wildidler	2	2		
M. A. Forster names blk. m. Pele, by Wildidler	3	3		

Time—1:46; 1:50.

Night and a severe day's work made it impossible to call the ladies' race. Some slight disappointment was manifested, but the majority slowly departed, with satisfaction at having encountered an immense amount of sport for their money.

FOURTH DAY.

This day being set for the ladies' race, in addition to the awarding of stock premiums, brought an early assemblage. Vehicles of all classes came and monopolized the space allotted to El Nino Eddie, the wonderful tight rope man.

The ladies appeared early; thoroughbreds had taken the place of the plodding plow nags they had used in exercise. Some comment was made on account of Miss Lawrence's changes being saddled with men's paraphernalia; the Judges ruled side-saddles in order and increased her popularity by her rapid compliance with the order. Miss Chilson was second favorite; being finely mounted she figured well in the pool box, but it was evident from the beginning that Mrs. Blacklaw was no match for either of her opponents. Miss Chilson was the favorite to the end of the sixth mile, when she fell from her horse, was lightly bruised, but discontinued the race, permitting Miss Lawrence to win easily, she showing herself to be a fearless and thorough horsewoman. Time for ten miles, twenty-seven minutes and four seconds.

Purse was one hundred and fifty dollars; entrance free; and every one accorded the award well placed.

Next event for the day was a trot of 2:45 class, with six entries; four showing up as starters. Again Rose's stable came to the front, bringing twenty dollars to seven for the balance. An easy start was effected, Carlos being outside, but he won so easily that no odds could be obtained, and Valentine brought twenty dollars, Hunter eleven dollars, Hardman four dollars. Carlos being such a pronounced favorite deprived the race of interest, save the poor folks won money in the box; Hardman getting second money.

SUMMARY.

District trotting, 2:45 class. Best three in five. Purse, \$400.

L. J. Rose names s. g. Don Carlos, by Del Sur	1	1	1
R. J. Blee names blk. g. Hunter, by Ky. Hunter	4	2	3
J. R. Simmons names b. g. Valentine	2	4	4
C. A. Durfee names b. g. Hardman, by Echo	3	3	2

Time—2:36½; 2:37½; 2:38.

The next race was a trot for two-year olds. Three entries had been made, representing the colts of Echo, Sultan, and A. W. Richmond. The Ela Hill's stock farm colt being under treatment on the sick list, narrowed the race to Rose's blk. g., by Del Sur, and William Smith's b. f. Queen of America.

The filly drew the pole. After a few false starts they got off well, the black colt winning the heat.

The prestige of the Rose stable seemed to follow the colts; pools on same never being closer than two to one, and dragging. The charm prevailed and ended with another victory for Sunny Slope.

SUMMARY.

District trotting for two-year olds. Best two in three. Purse, \$250.

L. J. Rose enters blk. g. (after race, Don Torres) by Del Sur	1	2	1
William Smith enters b. f. Queen of America, by Chief of the Echoes	2	1	2

Time—2:53½; 2:51; 2:52½.

Last race of the day was running, three quarters of a mile for two-year olds—the second time the flying colts appeared together; the distance half greater; eleven entries had been made. Bachelor's fast time at San José, Rose's one half mile victory, and Baldwin's usual racing popularity, made each a favorite. Each brought twenty dollars to ten dollars for the field. At the call seven appeared. A fine band of colts, backed by enthusiastic jockeys (for a jockey suit was to go to the winner's rider). Silk and top boots were worn as plentifully as on an English track. When the start was made it looked as though a blanket, and that a small one, would cover the bunch around the lower turns. Before the start every one of sporting proclivities considered his time to win had come.

"Those who had bet, did bet some more;
Many did bet, who never bet before."

Fifty dollars was easily had for each favorite, to forty dollars for the field. It is not misstating it to say the "pool sellers were happy." Again the little sorrel "Rose" was winner, but by a nose, St. David a good second, the balance bunched one length in the rear.

SUMMARY.

District running. Three fourths of a mile dash, for two-year olds. Purse, \$400.	
L. J. Rose enters s. g. Harry Rose, by Rutherford	1
Machado Bros. enter s. s. St. David, by Hockhocking	2
E. J. Baldwin enters ch. f., by Grinstead	3
Hill & Gries enter b. s. Bachelor, by Hockhocking	4
Machado Bros. enter b. s. Beaconsfield, by Hockhocking	5
Ela Hill's Stock Farm enters b. f. May, by Grinstead	6
Ela Hill's Stock Farm enters s. f. Cona, by Rutherford	7

Time—1:17.

This ended four days' of racing.

FIFTH DAY.

The first was a trotting race for 2:35 horses. Five entries had been made—but three appeared for the start, Rose's g. g. Centre being in good condition, and Major's performances in the past, caused considerable activity in pool circles. Major sold for seventy dollars, Centre forty dollars, to twelve for Lady Washington. After two scores they got off well, the gray inside, Major next, and the bay mare outside. Major broke badly; in fact, did everything but trot, Rose's g. g. winning the heat in 2:34, Lady Washington a length behind, Major distanced.

Pools stopped there, Centre winning next two heats and the race, and another feather for Rose's stable.

SUMMARY.

District trotting for 2:35 horses. Best three in five. Purse, \$500.	
L. J. Rose names g. g. Centre, by Sultan	1 1 1
E. L. Maybury names b. m. Lady Washington, by Whipple	2 2 2
N. A. Covarrubias names b. g. Major	dis

Time—2:34; 2:33½; 2:33½.

Next race was district running, three fourths of a mile dash, for graded horses. It closed with six entries; four reported as starters, and were put in the pools. Woodberry sold favorite, bringing ten dollars, Dottie Dimple seven, Otto K and Eclipse bringing five as a field. When called the knowing ones seemed to make the black filly the winner, which rapidly reached the crowd, for all were eager to buy her at twenty dollars to fifteen for all the rest. Enough betters had confidence in the bay stallion's blood to back him, and it proved to be a money making race, at least, for the pool sellers.

The horses seemed to understand that no foolishness would be tolerated, and they got a good start. Dottie Dimple proved herself a flyer, winning by a length, in 1:19, Woodberry second.

SUMMARY.

District running; three fourths of a mile dash, for graded horses. Purse, \$300.

Hill & Gries name blk. f. Dottie Dimple, by Ben Wade.....	1
T. C. Warden names b. s. Woodberry, by Hardwood.....	2
Sanchez Bros. name r. g. Eclipse	3
N. A. Covarrubias names blk. g. Otto K, by Nordale.....	4

Time—1:19.

The backers of the mare were overjoyful, her rider being lifted from his feet by the admiring and successful betters.

The third and last race for the day was a two-mile running race, a dash, free for all. Six entries closed the race, but May D and Ella Doane failed to appear; their owners being satisfied with their efforts at San José, remained at home. Klipspringer being lame, but three starters appeared. Grismer was recognized at once as a winner. He won the dash as easily as he sold in the pools, having brought thirty dollars to twelve dollars for the other two. Time, 3:42½.

SUMMARY.

Running. Free for all. Two mile dash. Purse, \$350.

E. J. Baldwin enters s. g. Grismer, by Grinstead.....	1
Kenniston & Co. enter b. s. Idler, by Wildidler.....	2
Marcus A. Forster enters blk. m. Pele, by Wildidler.....	3

Time—3:42½.

SIXTH DAY.

The first race was trotting, for district horses, 2:40 class. Four entries, and all starters. Rose's Don Carlos, as usual, being a favorite, selling for twenty dollars, to twelve dollars to all the rest. After a heat nothing could be had against him, and but little interest was taken in the race. Running seemed to interest the majority.

SUMMARY.

District trotting, 2:40 class. Three best in five. Purse, \$405.

L. J. Rose names s. g. Don Carlos, by Del Sur.....	1	1	1
Cañada Grande Stock Farm names b. s. Max, by Echo.....	2	2	3
John Wilson names blk. g. Apprentice, by The Moor.....	3	3	2
J. R. Simmons names b. g. Valentine.....	4	4	4

Time—2:33½; 2:32; 2:34.

The second race was a trot, free for all; but two entries, St. James and Major, having been made. Major having proved so treacherous the day before, caused an absense of interest. It was a walk-over for St. James.

SUMMARY.

Trotting. Free for all. Mile heats, three best in five. Purse, \$350.		
E. J. Baldwin enters b. g. St. James, by Champion.....	1	1
N. A. Covarrubias enters b. g. Major.....	2	2
Time—2:40; 2:35; 2:35.		

L. J. Rose trotted Del Sur to beat 2:28. Being an animal in which the community took much pride, the event gave much satisfaction. He accomplished the mile in 2:27 $\frac{1}{4}$.

The next was the third and last race of the two-year olds. It was a contributed stake from the owners of Hockhocking, Hardwood, Grinstead, and Rutherford, and open to foals of 1881 of the foregoing horses. Ten entries had been made. Six colts were announced to start. Bachelor, again a favorite, brought fifty dollars; Harry Rose (the winner of one half and three quarter dash), brought thirty-five dollars; the Machado stable (St. David and Beaconsfield), brought thirty dollars, and the field (including the plucky Baldwin filly, out of sister to Clara D, and Slaughter's Dublin Bay, a Hardwood colt). To say betting was lively does not express it. The pool clerks had their hands full. After much trouble the colts got off in a bunch, and it was the event of the course; nothing like it was ever witnessed in Los Angeles. The plucky chestnut filly and the big St. David, under whip and spur, passed the turns, down to the back-stretch and to the wire, daylight finding no room between them; dead heat from the crowd, and dead heat from the Judges. Time—1:46 $\frac{1}{2}$. The ties decided to repeat. In the meantime pool selling was lively; first one favorite, then another, the Hockhocking colt winning the race, the filly one half length behind.

SUMMARY.

Breeders' stallion purse for two-year olds. Mile dash. Purse, \$800.		
Machado Bros. enter s. s. St. David, by Hockhocking.....	0	1
E. J. Baldwin enters ch. f., by Grinstead, sister to Clara D.....	0	2
L. J. Rose enters s. g. Harry Rose, by Rutherford.....		3
Machado Bros. enter b. s. Beaconsfield, by Hockhocking.....		4
Hill & Gries enter b. s. Bachelor, by Hockhocking.....		5
F. M. Slaughter enters b. s. Dublin Bay, by Hardwood.....		6
Time—1:46 $\frac{1}{2}$; 1:48 $\frac{1}{2}$.		

Our California element went home both rich and happy.

The last event was a two-mile novelty race. Six entries had been made—but three were announced to start—Lucky B, Idler, and Jennie G. From the time of the announcement only a broken leg could prevent the Baldwin horse from being a winner. The owners of Idler and the plucky mare never lost confidence, but from necessity the second place only would attract the betting people, Idler readily bringing thirty-five dollars to twenty dollars for the mare. A good start was made; the mare stuck close to Lucky, and was putting in fast time for the points, leading everything to the one half mile, but Lucky B was too long-winded, and forced her to second place in the stretch on the first mile, Idler being a fair running companion during the race, without prospect of reaching the wire in advance. This

ended the week's sport, and the animal portion of the Fourth Annual Fair of the Sixth District.

SUMMARY.

Novelty running; two-mile dash. Purse, \$330.	
E. J. Baldwin enters b. s. Lucky B, by Rutherford.....	1
Kenniston & Co. enter b. s. Idler, by Wildidler.....	2
H. L. Samuels enters b. m. Jennie G., by Wheatley.....	3

Time—3:39 $\frac{1}{4}$.

STATE AGRICULTURAL SOCIETY.

AN ACT

TO PROVIDE FOR THE MANAGEMENT AND CONTROL OF THE STATE AGRICULTURAL SOCIETY BY THE STATE.

[Approved April 15, 1880.]

The People of the State of California, represented in Senate and Assembly, do enact as follows:

SECTION 1. The State Agricultural Society is hereby declared to be a State institution.

SEC. 2. Within ten days after the passage of this Act, the Governor shall appoint twelve resident citizens of the State, who shall, when organized, constitute a State Board of Agriculture, who shall, except as hereinafter provided, hold office for the term of four years, and until their successors are appointed and qualified. Vacancies occurring from any cause in the Board shall be filled by appointment of the Governor for the unexpired term of the office vacated.

SEC. 3. Within ten days after their appointment, the persons so appointed shall qualify, as required by the Constitution, and shall meet at the office of the State Agricultural Society, and organize by the election of one of their number as President of the Board and said society, who shall hold said office of President for the term of one year, and until his successor is elected and qualified. The Board shall also elect a Secretary and Treasurer, not of their number, who shall each hold office at the discretion of the Board.

SEC. 4. At the same meeting the members of the Board shall, by lot or otherwise, classify themselves into four classes of three members each. The terms of office of the first class shall expire at the end of the first fiscal year; of the second class, of the second year; of the third class, of the third year; of the fourth class, at the end of the full term of four years. The fiscal year shall be from the first of February to the first of February.

SEC. 5. The State Board of Agriculture shall be charged with the exclusive management and control of the State Agricultural Society as a State institution; shall have possession and care of its property, and be intrusted with the direction of its entire business and financial affairs. They shall define the duties of the Secretary and Treasurer, fix their bonds and compensation, and shall have power to make all necessary changes in the Constitution and rules of the society, to adapt the same to the provisions of this Act, and to the management of the society, its meetings and exhibitions. They shall provide for an annual Fair or exhibition by the society of all the industries and industrial products of the State, at the City of Sacramento; *provided*, that in no event shall the State be liable for any premium awarded or debt created by said Board of Agriculture.

SEC. 6. The Board shall have power to appoint all necessary Marshals and police to keep order and preserve peace at the annual Fairs of the society; and the officers so appointed shall be vested with the same authority for the preservation of order and peace, on the grounds and in the buildings of the society, that executive peace officers are vested with by law.

SEC. 7. Said Board shall use all suitable means to collect and disseminate all kinds of information calculated to educate and benefit the industrial classes, develop the resources, and advance the material interests of the State, and shall, on or before the first day of February of each year, report to the Governor a full and detailed account of their transactions, statistics, and information gained, and also a full financial statement of all funds received and disbursed. They shall also make such suggestions and recommendations as experience and good policy may dictate for the improvement and advancement of the agricultural and kindred industries.

SEC. 8. The Superintendent of State Printing shall, each year, print and bind in cloth four thousand volumes of said transactions, and deliver the same to said Board of Agriculture for distribution and exchange. He shall also do such job printing as said Board may require to carry out the provisions of this Act.

SEC. 9. The Directors or Board of Managers of each county and district agricultural society or association, and of county, district, or State horticultural and stock breeding association or society, organized and acting under the laws of this State, shall report annually, on or before the first day of April, to the State Board of Agriculture, the name and Post Office address of each officer of such society or association; and, on or before the first day of December, shall report to the Board of Agriculture the transactions of said society, including the premiums offered, the list of stock and articles exhibited, and the premiums paid; the amount of receipts

and expenditures for the year, the new industries inaugurated, and any and all facts and statistics showing the development and extent of the industries, products, and resources of the county or district embraced within the management of such society or association; *provided*, that the provisions of this Act shall not apply to any Board of Commissioners or other body organized under the laws of this State, the object of which is to promote vinicultural industries, unless such Board or body shall voluntarily request the privilege of making such reports as are called for by this Act, in which case this Board or body shall enjoy equal privileges as are accorded to other institutions devoted to agriculture.

SEC. 10. To facilitate such reports, the State Board of Agriculture shall have prepared, and shall furnish such societies with necessary schedules and blanks for such reports; and such State Board shall include such reports from societies and associations, or so much thereof as they may deem advisable, in their report to the Governor.

SEC. 11. When said State Board of Agriculture shall have been organized and classified as provided herein, the Secretary of the Board shall report such organization and classification to the Governor. He shall also report any vacancy that may occur in said Board at any time.

SEC. 12. All laws and parts of laws in conflict with this Act are hereby repealed.

SEC. 13. This Act shall take effect and be in force from and after its passage.

CONSTITUTION
OF THE
CALIFORNIA STATE AGRICULTURAL SOCIETY.

[Revised and adopted by the State Board of Agriculture, May 18, 1880.]

NAME.

SECTION 1. This society shall be called "The California State Agricultural Society."

OBJECT.

SEC. 2. It shall be the object of this society to encourage the cultivation of the soil, and the general development of all the agricultural resources of this State.

SEC. 3. To foster every branch of mechanical and household arts calculated to increase the happiness of home life.

SEC. 4. To extend and facilitate the various branches of mining and mining interests.

MEMBERSHIP.

SEC. 5. *Annual Members.*—Any person who shall pay into the funds of this society the sum of five dollars, may become a member of the same; such membership to expire at the end of the current fiscal year.

SEC. 6. *Life Members.*—Any person may become a member for life by the payment of fifty dollars; or, if already a member, by the payment of forty-five dollars, or by serving a full term as a member of the State Board of Agriculture, and shall thereafter be exempt from all dues and assessments.

SEC. 7. *Honorary and Corresponding Members.*—Any person whom the Board shall propose may be elected an honorary or corresponding member, and shall enjoy, free of charge, all the privileges of the society, except voting and holding office.

SEC. 8. *Privileges of Members.*—Any citizen of this State being a member of this society, shall be eligible to office, entitled to vote, and enjoy the free use of the library, under the rules of the same, and have free admission, accompanied by his wife and minor children, to all the exhibitions of the society, and shall be permitted to compete for premiums in any or all departments.

SEC. 9. *Expulsion of Members.*—Any member who shall present for exhibition any article or animal which he is not entitled by the rules of the society to exhibit, or who shall attempt to deceive, or be guilty of a breach of good faith towards the society, may be expelled by a vote of two thirds of the members present at any meeting of the Board; *provided*, always, that no member shall be expelled unless written notice of the alleged offense shall have been served on him, or left at his usual place of residence at least twenty days previous to the action.

OFFICERS.

SEC. 10. The officers of this society shall consist of twelve Directors, to be appointed by the Governor, who shall constitute a State Board of Agriculture, seven of whom shall constitute a quorum. The Board shall be charged with the exclusive management and control of the State Agricultural Society as a State institution; shall have possession and care of its property, and be intrusted with the direction of its entire business and financial affairs; shall have power to make all necessary changes in the Constitution and rules of the society; shall provide for an annual Fair or exhibition by the society of all the industries and industrial products of the State, at the City of Sacramento, and such other exhibition as they may deem important. They shall elect one of their members as President of the Board and society, and a Treasurer and Secretary, not members of the Board. They may also appoint, annually, as officers of the Board, a chemist, a botanist, a mineralogist, a geologist, a metallurgist, an ornithologist, and an entomologist, and define the duties of each. They may appoint such committees on the

various departments of agriculture, mining, and manufactures, either generally or for specific purposes, as they may deem important for the best interests of the State, and require such committees to report the results of their investigations to the Board at such times as may be named by them.

SEC. 11. *Duties of President.*—The President shall preside at all meetings of the Board and of the society; shall have power to call special meetings of the Board when necessary, and at the written request of ten members, may call extra meetings of the society; shall appoint all meetings not otherwise provided for; and shall sign all financial and official documents emanating from the society, and not otherwise provided for. In the absence of the President from any meeting of the Board or society, any Director may be called to the chair, and during such meeting, and for the completion of any business transacted, or ordered at the same, shall have the same powers as the President.

SEC. 12. *Duties of Secretary.*—The Secretary shall conduct the correspondence of the Board or society, keeping copies of all important letters written in the name or on behalf of the Board or society, holding the same free to the inspection of any member of the Board or society, at any regular meeting of the same. He shall also receive and file all letters addressed to the Board or society, holding the same subject to the Board of Directors. He shall attend all meetings of the society and the Board, keeping a full record of the proceedings of each in a book for that purpose. He shall prepare and publish all notices of meetings, shall keep a roll of all standing committees, and call the same (noticing absences) whenever desired to do so by the Chair; shall sign all certificates of honorary and corresponding and life memberships, and forward the same to those entitled to receive them. He shall keep, in a book prepared for that purpose, the name and address of every member; shall prepare and sign all gratuitous or complimentary cards or tickets of admission; shall countersign all diplomas, certificates of merit, etc., awarded by the Board, and forward the same to their respective claimants. He shall be ex officio Librarian; shall keep the seal, and all the plates, dies, engravings, etc., belonging to the society, and shall cause to be struck therefrom such medals and impressions as may, from time to time, be required. He shall have charge of all specimens, models, plants, seeds, books, etc., and arrange, prepare, or distribute the same under the direction of the Board. He shall prepare all reports to be made by the Board to the society, and to the State. He shall receive all moneys due or payable to the society, and pay the same to the Treasurer, taking his receipt therefor; shall hold all bonds filed by officers of the society for the faithful performance of their duty, and all vouchers for every class of expenditure. He shall countersign all drafts ordered by the Board, and all certificates of annual and life membership, and keep an account of the same in a book, as they are issued, and shall, in December of each year, prepare a tabular statement of the receipts and expenditures of the Board according to the law organizing the same.

SEC. 13. *Duties of the Treasurer.*—The Treasurer shall receipt for all funds at the hands of the Secretary, and shall disburse the same only on the order of the Board, attested by the President and Secretary. He shall also hold in trust, all certificates of stock, bonds, notes, deeds, or other evidences of debt or possession belonging to the society, and shall transfer, invest, or dispose of the same only by direction of the Board. He shall file with the Secretary a bond for the faithful performance of his duties; said bonds to be approved by the Board, and shall, at the annual meeting, make to the society a detailed report of all his transactions.

STANDING COMMITTEES.

SEC. 14. *Committee of Finance.*—The Committee of Finance shall consist of five members of the Board, the President being one, whose duty it shall be to audit the Secretary and Treasurer's accounts, to examine and approve all bills before they are paid, to have general supervision of the finances of the society, and to report their transactions and financial condition of the society in full to the Board whenever called on so to do.

SEC. 15. *Library Committee.*—The Library Committee shall consist of four members of the Board and the Secretary, whose duty it shall be to have the general supervision of the library and cabinet, to make all necessary rules and regulations for the government of the same (said rules and regulations being subject to the approval of the Board), to suggest such means for the safe keeping and enlargement of both the library and cabinet as they may deem expedient, and to make a full report of their transactions, together with the state of the department under their charge, at each annual meeting.

SEC. 16. *Visiting Committee.*—The Visiting Committee, to be appointed by the Board from their own number, shall visit and examine all farms, orchards, vineyards, nurseries, field crops, irrigation works, agricultural machine works, agricultural machinery in operation, etc., which may be entered for competition, and which require examination at other times and places than the annual Fair; to award premiums for the same according to the schedule, and recommend such gratuities as they may deem proper, and make a full report to the Board at least one day previous to the annual Fair.

SEC. 17. *Printing and Publication Committee.*—The Committee on Printing and Publication shall consist of five (the President and Secretary being two), whose duty it shall be to contract for and superintend, under the direction of the Board, all printing and publishing necessary for the society.

OFFICE AND ROOMS.

SEC. 18. The office, rooms, library, and cabinet of the Board and society shall be permanently located at the Capital of the State.

DISTRICT AGRICULTURAL ASSOCIATIONS.

AN ACT

TO FORM AGRICULTURAL DISTRICTS, TO PROVIDE FOR THE ORGANIZATION OF AGRICULTURAL ASSOCIATIONS THEREIN, AND FOR THE MANAGEMENT AND CONTROL OF THE SAME BY THE STATE.

[Approved April 15, 1880.]

The People of the State of California, represented in Senate and Assembly, do enact as follows :

SECTION 1. The Counties of Alameda, Contra Costa, and San Francisco shall constitute Agricultural District No. 1.

SEC. 2. The Counties of San Joaquin, Calaveras, Fresno, Kern, Merced, Mariposa, Stanislaus, Tulare, and Tuolumne shall constitute Agricultural District No. 2.

SEC. 3. The Counties of Sutter, Yuba, Butte, Colusa, Tehama, Yolo, and Sacramento shall constitute Agricultural District No. 3.

SEC. 4. The Counties of Sonoma, Marin, Solano, Napa, and Lake shall constitute Agricultural District No. 4.

SEC. 5. The Counties of Santa Clara and San Mateo shall constitute Agricultural District No. 5.

SEC. 6. The Counties of Los Angeles, San Diego, San Bernardino, Santa Barbara, Ventura, and Inyo shall constitute Agricultural District No. 6.

SEC. 7. The Counties of Monterey, Santa Cruz, San Luis Obispo, and San Benito shall constitute Agricultural District No. 7.

SEC. 8. The Counties of Nevada, Placer, El Dorado, Amador, Alpine, and Mono shall constitute Agricultural District No. 8.

SEC. 9. The Counties of Mendocino, Humboldt, and Del Norte shall constitute Agricultural District No. 9.

SEC. 10. The Counties of Siskiyou, Trinity, and Shasta shall constitute Agricultural District No. 10.

SEC. 11. The Counties of Plumas, Lassen, Modoc, and Sierra shall constitute Agricultural District No. 11.

SEC. 12. Any fifty or more persons representing a majority of the counties within any one of the districts above constituted, may form an association for the improvement of the material industries within such district, and when so formed the association shall be known and designated by the name of ——— Agricultural Association, and by such name and style shall have perpetual succession, and shall have power and authority to contract and be contracted with, to sue and be sued, to have and use a common seal, to purchase and hold and lease real estate, with such buildings and improvements as may be erected thereon, and may sell and lease and dispose of the same at pleasure. The said real estate shall be used by such association for the purpose of holding exhibitions of horses, cattle, and other stock, of the agricultural, horticultural, viticultural, mechanical, manufacturing, and domestic products of such district, with view to the improvement of all the industries in the same.

SEC. 13. The officers of such association shall consist of eight Directors, who shall constitute a District Board of Agriculture for District Number ———, a President, who shall be one of their number, and a Secretary and Treasurer, not of their number.

SEC. 14. Within ten days after the formation of an agricultural association within any of the districts above constituted, in accordance with the provisions of this Act, and notice of such formation to the Governor, the Governor shall appoint eight resident citizens of such district as members of a District Board of Agriculture for said district, whose term of office shall be four years, except as hereinafter provided.

SEC. 15. Within ten days after their appointment, the persons so appointed shall qualify, as required by the Constitution, and shall meet at a place within the district, and organize by the election of one of their number President of the Board and association, who shall hold said office of President one year, and until his successor is elected; they shall also elect a Secretary and Treasurer.

SEC. 16. At the same meeting the members of the Board shall, by lot or otherwise, classify themselves into four classes of two members each. The terms of office of the first class shall expire at the first end of the fiscal year; of the second class, of the second fiscal year; of the third class, of the third fiscal year; and of the fourth class, at the end of the full term of four years. The fiscal year shall be from December first to December first.

SEC. 17. Each association so formed and organized is hereby declared and shall be recog-

nized a State institution, and the Board so appointed and qualified shall have the exclusive control and management of such institution for and in the name of the State, and shall have the possession and care of all the property of the association, and shall fix the terms of office, and the bonds of the Secretary and Treasurer, and determine their salaries and duties. They shall have power to make all necessary by-laws, rules, and regulations for the government of the association and the management of its prudential and financial affairs. They shall provide for an annual Fair or exhibition by the association of all the industries and industrial products in the district, at such time and place as they deem advisable; *provided*, that no District Fair shall be held in any of the districts at the same time of the State Fair; and, *provided further*, that the State shall in no event be liable for any premium offered, or award, or for any debt contracted by any District Board of Agriculture or Agricultural Association.

SEC. 18. When any District Board of Agriculture shall have been classified and organized as herein provided, the Secretary of the Board shall report such classification and organization to the State Board of Agriculture; he shall also report the same to the Governor, and shall report any vacancy that may occur in the Board to the Governor, who shall fill the same by appointment for the unexpired term.

SEC. 19. All laws and parts of laws in conflict with this Act are hereby repealed.

SEC. 20. This Act shall take effect from and after its passage.

AN ACT

TO AMEND SECTIONS THREE, FOUR, NINE, AND ELEVEN OF AN ACT ENTITLED "AN ACT TO FORM AGRICULTURAL DISTRICTS, TO PROVIDE FOR THE ORGANIZATION OF AGRICULTURAL ASSOCIATIONS THEREIN, AND FOR THE MANAGEMENT AND CONTROL OF THE SAME BY THE STATE," APPROVED APRIL 15, 1880, SO AS TO CREATE TWO ADDITIONAL DISTRICTS.

[Approved March 6, 1883.]

The People of the State of California, represented in Senate and Assembly, do enact as follows:

SECTION 1. Section three of the Act of which this is amendatory, entitled an Act to form agricultural districts, to provide for the organization of agricultural associations therein, and for the management and control of the same by the State, approved April fifteenth, eighteen hundred and eighty, is amended to read as follows:

Section 3. The Counties of Butte, Colusa, and Tehama, shall constitute Agricultural District Number Three.

SEC. 2. Section four of said Act is amended to read as follows:

Section 4. The Counties of Sonoma, Marin, Solano, and Napa, shall constitute Agricultural District Number Four.

SEC. 3. Section nine of said Act is amended to read as follows:

Section 9. The Counties of Humboldt and Del Norte shall constitute Agricultural District Number Nine.

SEC. 4. Section eleven of said Act is amended so as to read as follows:

Section 11. The Counties of Plumas, Lassen, Modoc, and Sierra, shall constitute Agricultural District Number Eleven. The Counties of Mendocino and Lake shall constitute Agricultural District Number Twelve; and the Counties of Sacramento, Yolo, Yuba, and Sutter, shall constitute Agricultural District Number Thirteen.

SEC. 5. This Act shall take effect immediately.

AN ACT

TO AMEND AN ACT ENTITLED "AN ACT TO FORM AGRICULTURAL DISTRICTS, TO PROVIDE FOR THE ORGANIZATION OF AGRICULTURAL ASSOCIATIONS THEREIN, AND FOR THE MANAGEMENT AND CONTROL OF THE SAME BY THE STATE," APPROVED APRIL 15, 1880.

[Approved March 9, 1885.]

The People of the State of California, represented in Senate and Assembly, do enact as follows:

SECTION 1. Section eighteen of said Act is hereby amended so as to read as follows:

Section 18. When any District Board of Agriculture shall have been classified and organized as herein provided, the Secretary of the Board shall report such classification and organization

to the State Board of Agriculture; he shall also report the same to the Governor, and shall report any vacancy that may occur in the Board to the Governor, who shall fill the same by appointment for the unexpired term. The Governor shall have the power and authority to remove a Director at any time for good and sufficient cause, and to appoint a Director to fill the vacancy.

Sec. 2. This Act shall take effect immediately.

AN ACT

TO AMEND SECTION EIGHT OF AN ACT ENTITLED "AN ACT TO FORM AGRICULTURAL DISTRICTS, TO PROVIDE FOR THE ORGANIZATION OF AGRICULTURAL ASSOCIATIONS THEREIN, AND FOR THE MANAGEMENT AND CONTROL OF THE SAME BY THE STATE," APPROVED APRIL 15, 1880.

[Approved March 14, 1885.]

The People of the State of California, represented in Senate and Assembly, do enact as follows:

SECTION 1. Section eight of the Act recited in the title hereto is amended so as to read as follows:

Section 8. The Counties of Nevada and Placer shall constitute Agricultural District Number Seventeen; and the Counties of Alpine, Amador, El Dorado, and Mono, shall constitute Agricultural District Number Eight. And the sum of three thousand dollars is hereby appropriated out of any money in the State Treasury not otherwise appropriated, for the aid of District Agricultural Society Number Seventeen, to be audited and paid the same as appropriations for other district agricultural societies.

Sec. 2. This Act shall take effect immediately.

REPORT.

OFFICE OF THE STATE BOARD OF AGRICULTURE, }
SACRAMENTO, February 1, 1885. }

His Excellency GEORGE STONEMAN, Governor of California:

SIR: The expiration of another fiscal term reminds us that our report for the past year must be handed in and a showing made of our labors. To this end we present a detailed financial statement for your perusal, as well as several papers relating to our agricultural interests.

The occupancy of the State Agricultural and Industrial Exposition building for the first time, proved a success beyond a measure, and we are pleased to note that our predictions in reference to the necessity of such a building have proven correct. It would have been supposed that, with this large building, all who applied for space would be accommodated; but such was not the case. The demand for space was unusually large, and many exhibitors were obliged to remain away, as we were not able to accommodate all that applied. The increased display of agricultural machinery from the various manufactories on this coast, brought us face to face with the fact that our machinery hall was far too small to accommodate the entries in this department; in consequence of which we were compelled to fence both courts on the north and south of the main entrance, and utilize this space for exhibits of agricultural implements. The improvements in this class are increasing yearly; and the Board finds that ere long an addition of no small magnitude will be necessary to this part of our magnificent building.

The display made in the third department (textile fabrics) excelled all efforts of the past. The display of ladies' fancy work was the largest and most varied ever made on the coast; while the exhibits made in the dry and fancy goods classes brought out many meritorious and unique designs. The exhibits in the fourth department (mechanical products) were extraordinary in the way of variety and design, and were attractive throughout. In this department were shown nearly every line of goods made and sold on this coast, as well as those manufactured in nearly every quarter of the globe. The great benefit derived by an exhibition of this character is obvious, and many were the compliments paid to the different exhibitors for their tasteful and well arranged displays. The fruit and agricultural exhibit fully exceeded any ever made under the auspices of this society. The experiment of having county exhibits proved to be a success in every respect. The counties represented vied with each other for supremacy in point of quality, quantity, and arrangement. The counties represented by exhibits, collectively, were: Sonoma, Butte, San Joaquin, Sacramento, San Diego, and Sutter; and the awards were made by the committee in the order named. These exhibits were all transferred to the World's Fair through the agency of Mr. C. B. Turrill, representing the Southern Pacific Railroad Com-

pany, and from information received we are pleased to know that these exhibits outrank any made in the Agricultural Department at New Orleans.

The interest thus created by reason of the important step taken by the State Board of Agriculture in encouraging exhibits of this character, has been manifested by the action of the State Grange at their last State Convention, when they petitioned the Board to continue its efforts in this line, and increase the premiums to \$5,000 for county exhibits at the State Fair of 1885. While the Board are anxious to develop the resources of the State in every possible way, they must first look to their resources. The amount of money appropriated by the State for the aid of this society during the year just ended, does not amount to one tenth of the money expended by the Board. Consequently if the people want the society to advance faster than they can upon their own resources, more money must be appropriated. The sum we do receive is given with reluctance by the Legislature each session; while nothing is said of the time given by the Directors of this Board, who receive naught in return for their arduous labors in assisting in every imaginable way in promoting the agricultural resources of the State. This is an important institution, as the encouragement of immigration depends generally upon the manner in which our resources are brought out. No cheaper or more effectual mode can be devised than by seconding the efforts of this Board. The State Legislature now in session are asked to appropriate \$15,000 annually for the aid of this institution, and no appropriation can be made that will aid the State more than this one. The management of the society is economical in every respect. But we believe that the society can be made more useful and effective if the necessary funds are available, and we would here state *that the money appropriated by the State is used for nothing else than the encouragement of agriculture and mechanical industries.*

CROP REPORTS.

We are pleased to know that your Excellency has recommended, in your biennial message to the Legislature, the establishment of a system of crop reports to issue under the direction of this Board. No greater step towards promoting the agricultural interest of California could be made. The efforts of the Board in collecting the statistics on cereals during the several years past, have met with great encouragement from the press. The reports furnished are known to be from a fair estimate, and made with no other intention than that of furnishing those interested in agricultural pursuits with reliable figures. The yield of wheat in the year 1884, was unprecedented, both in quantity and quality. The favorable weather of last Spring, during the last stages of maturity of the grain, permitted the heads to fill to their utmost capacity; from that time until harvested, no set-back was had, and the yield was large. In consequence of this vast yield the prices were lower than ever. First class milling wheat sold as low as \$1 20 per cental. The low prices and meager facilities for shipping our large product resulted in there being on hand at this time about 25,000,000 bushels of wheat. In consequence of the unusual yield and low prices, taken in consideration with the vast yield abroad, wheat raising has not been as remunerative to the producer as formerly. The effect will be a shortage in acreage for the present season. You will find herewith in tabulated form the statistics collected by

the Board for the year 1884. Much care has been taken in collecting the same, and as each year's experience aids us in many ways, we hope to soon be able to branch out and have returns on all of California's products.

LIVE STOCK.

The interest taken by this society since its organization, in the encouragement of live stock breeding, has had the effect of improving all classes of stock. The varied breeds shown each year causes one to admire the care and painstaking manner in which the breeding interest is conducted. The magnitude of our various stock breeding farms are not excelled in the United States, and California can well be called "the animal-producing State of the Union." The adaptability of our climate, and the zeal of our breeders, has placed California in the lead as a stock-breeding State. In no other State can one find greater rarity and quality in either horses, mules, cattle, or sheep. The annual exhibitions given by this society has had much to do with improving the live stock of California. These exhibitions are now looked upon as a necessity. They have been adopted as a commercial mart when purchasers and sellers are brought together each year and close inspection given to the various breeds exhibited. The purchaser has the benefit of an assortment, or in other words he is favored with the chance to compare the stock of different breeding farms, whereas were it not for these exhibitions he would be compelled to travel from place to place, relying wholly upon his memory in making comparisons. As it is, parties who desire to purchase, postpone their trips until the State Fair. At that period of the year the farmer has more spare time than at any other season. He desires recreation, and combines that with business, and makes his trip to the State Fair. There he meets with others from different parts of the State, views are exchanged, comparisons made, and stock purchased with no haste, no anxiety, and an abundance of time to consider. Foreign purchasers are likewise availing themselves of the opportunity offered, and each year representatives may be seen from foreign parts examining and purchasing our stock. Thus we claim that the benefit the society has been to the State in this one department is invaluable.

PERMANENT IMPROVEMENTS.

The result of our labors in this respect has been most satisfactory. We have entirely remodeled our stock grounds, and have built new stabling, and increased the capacity of the grounds. The speed track has been reconstructed, so that now it is a complete "regulation" track, with quarter turns and quarter stretches. The entire track has been covered with a coating of red clay soil, which seems to give it a solid footing and a springy surface, so that horses are not as liable to injury as they generally are on loose sandy soils. The improvement made in this behalf is valuable, and received with satisfaction by breeders in general. The improvements made at the Pavilion include a portion of the original cost, as the Board found that the amount appropriated was not sufficient to finish the building as was contemplated. In addition to this, however, considerable expense has been attached to the fitting up of the machinery hall as well as other portions of the building; it being the first year of occupancy much new work was necessary that will not have to be done on each succeeding

year. We furnish here appended a complete list in detail of the money expended for improvements made at the Park and Pavilion since October 10, 1883, at which date the work commenced. You will observe that the amounts expended are:

Park.....	\$22,627 80
Pavillon	38,544 91
Making a total of	\$61,172 71

At the commencement of this work we had on hand about \$8,150 85, and have received on percentage from sales made \$15,235 75, and are indebted to sundry parties at this time the sum of \$28,678 94; adding these amounts together it will be observed that there is an expended balance of \$9,107 17, which, with the \$8,150 85 on hand at commencement, makes \$17,258 02, which amount has come out of our own resources.

STATEMENT IN DETAIL OF EXPENSES OF BUILDING AND IMPROVEMENTS AT
PARK AND PAVILION.

Building and Improvements at Pavilion.

1883-4	Filling conservatories	\$275 00
	Filling around building	97 35
	McKillican, on account building	10,000 00
	Hose	356 72
	Speaking tubes	17 75
	Extra tinning	67 00
	Frosting	665 60
	Sidewalks	691 00

ANNUAL MEETING.

The Board of Directors held their annual meeting on Monday, February 9, 1885, with President Finigan in the chair, and the following members present: Green, Hancock, Newton, Coulter, Boggs, LaRue, and Chase.

Absent—Messrs. Carr, Shafter, Rose, and Shippee.

The Secretary's report for the year ending February 1, 1885, was read, adopted, and ordered to print, and to be transmitted to the Governor. After disposing of other business of minor importance, the Board proceeded to organize for 1885 by the

ELECTION OF OFFICERS.

The Board of 1885 consists of the same members, except that Hon. S. T. Coulter was appointed during 1884, vice W. P. Coleman, resigned, Directors Green, Shafter, and Carr having been reappointed, vice themselves, terms expired.

The first order of business being the election of President to serve one year from February 1, 1885, the presiding officer declared nominations to be in order.

Mr. Green nominated Mr. Jesse D. Carr, of Salinas.

Mr. La Rue nominated Mr. Chris. Green, of Sacramento.

Mr. Green thanked the gentleman for the compliment, but respectfully declined.

Mr. Boggs moved that the Secretary cast the vote of the Board for Mr. Carr. Objections having been made, the same was withdrawn, and the members proceeded to ballot. First ballot: Mr. Carr received three votes; Mr. Finigan received three votes; Mr. Green received one vote; blank, one vote. No choice. Second ballot: Mr. Carr received five votes, and Mr. Finigan received three votes. Mr. Carr, having received the majority of all votes cast, was declared elected.

Mr. Finigan, upon retiring from the chair, returned thanks to the Board for past honors, and assured them that he would at all times work for the society's interest.

In the absence of the President elect, Mr. La Rue was invited to preside.

Hon. H. M. La Rue in the chair.

The next business in order being the election of a Superintendent of the Park.

Mr. Hancock nominated Mr. Green.

Mr. Green nominated Mr. Hancock.

Roll called, with the following result: For Green—Messrs. Hancock, Newton, Coulter, Boggs, La Rue, Chase, and Finigan—seven. For Hancock—Mr. Green—one.

Mr. Green, having received a majority of all the votes cast, was declared duly elected Superintendent of the Park.

The next business in order being the election of a Superintendent

of the Pavilion, the presiding officer declared nominations to be in order.

Mr. Coulter nominated Mr. Hancock.

Mr. Hancock declined.

Mr. Newton nominated Mr. La Rue.

Roll called, with the following result: For La Rue—Messrs. Green, Hancock, Newton, Coulter, Boggs, Chase, and Finigan—seven. For Hancock—La Rue—one.

Mr. La Rue, having received a majority of votes, was declared duly elected.

The presiding officer named the following committees:

ON PREMIUM LIST.

The entire Board.

ON SPEED PROGRAMME.

Messrs. Chase, Finigan, Green, Newton, Rose, and La Rue.

The next meeting of the Board was set for Monday, March 16, 1885.

The Secretary was directed to advertise the usual colt purses of \$1,000 each, for two, three, and four-year olds. Entries to close March 10, 1885.

After considering other matters pertaining to the State Fair of 1885, and the financial condition of the society, the Board adjourned.

THE SHIPPEE COMBINED HARVESTER.

No. 1.

THE SHIPPEE COMBINED HARVESTER.

No. 2.

Report of Committee Appointed by the State Board of Agriculture to Examine Combined Harvesters.

MR. PRESIDENT: Your committee that was directed to examine the various combined harvesters in the field, beg leave to report that they have performed that duty, having examined, in operation in the field, about fifteen machines, embracing seven different patterns, viz.: The Howser, Young, Powell, Shippee, Holt, Benton, and Emerson. Practical tests were made, in fields, of heavy "down" grain, light grain, and in grain badly fouled with weeds. After this examination, we are of the opinion that the "Shippee Machine" is the most practical, will put grain in the sack at the least expense and in the best condition. For these reasons we recommend that the Society's premium be awarded to the Shippee Combined Harvester.

(Signed.)

JOHN BOGGS.

REPORT OF RACES.

BY JOS. CAIRN SIMPSON.

FIRST DAY.

The opening day of the Fair of the State Agricultural Society was very successful in every point of view. There was a larger attendance than ever before on a first day, and the show of stock is certainly superior to that of former years. The new track receives encomiums from all; drivers grow enthusiastic when speaking of it, and the spectators are satisfied with seeing faster time than could have been made on the old track by the same classes of horses. The arrangements of the grounds are far superior to what they were before the late improvements were made, and everything is compact. The cattle stalls surround the first turn, but the space being inadequate, others had to be built on the west side of the homestretch. The amphitheater for the show of stock is near the entrance gate, while before it was on the other side of the course. The forenoon was taken up with making entries, and the exhibition stock were still coming. For the afternoon three races were on the bill. The first race was the Occident stake for trotting, three-year olds, the nominations to which are made the first of January of each year when the colts are two years old. The stake is \$100 each, \$25 to be paid when the nominations are made, \$25 on the first of January following, and \$50 thirty days preceding the day fixed for trotting. The Association add a gold cup of the value of \$400, and as there were thirty nominations, ten of which made the second payment and three the third, the money value was \$1,175 besides the cup. The race was heats of a mile, best two in three, in harness. The starters were Antevolo, Griselda, and Robert Lee. The placing was in the order their names are written. In the pools Antevolo was so much the favorite that little was done in that line. He won the race so easily that little description is necessary, excepting what the summary will furnish. He trotted the last half of the first heat in 1:13 $\frac{1}{4}$.

SUMMARY.

STATE AGRICULTURAL SOCIETY, SACRAMENTO, September 11, 1884.—Occident stake, for three-year olds; mile heats.

Antevolo, br. c., by Electioneer, dam Columbine, by A. W. Richmond—Jos. Cairn Simpson.	1	1
Robert Lee, ch. c., by Nutwood—Rancho del Paso	2	2
Griselda, g. f., by A. W. Richmond—L. D. Todhunter.	dis.	

Time—2:29 $\frac{1}{4}$; 2:31 $\frac{1}{4}$.

The second race was for the 2:25 class for pacers for a purse of \$1,000, the starters being Maud B, Shaker, Ackerman, and Prince. The night before, and on the grounds previous to the race, Maud B was the favorite, Shaker pressing her close for the position, and quite a large amount of money was risked. The first heat upset the calculations of the knowing ones, Shaker taking the lead at the first furlong and never surrendering it, though Prince was lapped on him when

half way down the stretch. Ackerman gained second position, Prince third, and Maud B, who did not make a move for the heat, fourth. Time, 2:25½. After this the betting was changed so that Shaker was the favorite at \$100. Maud bringing \$30 and the field \$20. The second heat proved that the long price on Shaker had not been fairly earned, as Maud took the lead, passing the quarter in 34½ seconds, and at the half in 1:10½ she was still leading by two open lengths. From that point Shaker gained a trifle, but was never able to jeopardize the chances of Maud, who won in 2:21½. Shaker was now the favorite, bringing \$50 to \$35 on Maud and \$23 on the field. The third heat brought another revulsion, Maud B winning it in 2:23, Shaker several lengths in the rear, so that the betters were fain to put \$30 on her to \$40 on Shaker, and \$15 on the field. The fourth heat of the pacing race (which was preceded by the first in the 2:25 class, a description at which will follow the close of the pacing), was won handily by Maud, the placing being the same as before, and the time 2:23.

SUMMARY.

STATE AGRICULTURAL SOCIETY, SACRAMENTO, September 11, 1884.—Purse \$1,000; 2:25 class; pacers.

Maud B., b. m., by Bertrand Black Hawk—H. J. Agnew.....	4	1	1	1
Shaker, b. g.—M. F. Odell.....	1	2	2	2
Fred Ackerman, b. g.—J. T. McIntosh.....	2	4	4	4
Prince, b. g.—S. C. Tryon.....	3	3	3	3

Time—2:25½; 2:21½; 2:22; 2:23.

There was a good deal of speculating on the trotting race, Sister being a strong favorite all through. Some time was occupied in seoring, but when the word was given the horses were nearly level; James H had the pole, Magdallah second, Sister third, and Louis D on the outside. James H working very steadily took the lead on the turn, with Magdallah second, Sister third, and in this order the quarter-pole was passed in 35½ seconds. There was no change at the half, before reaching which Magdallah broke, Sister taking second place on the turn, but she could not reach James H, as he kept up his flight of speed, winning with two lengths to spare in 2:21; Sister second, Magdallah third, and Louis D fourth.

Soon after the start for the second heat Sister broke, losing so much ground that it appeared as though all her chances for winning the heat were ended. James H broke when near the quarter, and Magdallah took the lead, passing the quarter in 36½. At that point she was a length in the lead of James H, but at the half in 1:11½ there was but little difference, and Sister had closed some of the long gap. Rounding the turn all three were close together, and a very fine struggle down the stretch between James H and Sister was the result. James H broke at the northern end of the grand stand, which gave Sister the heat without further competition in 2:2½, with Magdallah second, James H third, and Louis D distanced.

The betting after the first heat was \$160 on Sister to \$130 on the field, and after the second there was a return of the old favoritism, so that Sister brought \$110 to \$20 on all the others. The third heat was somewhat varied by Magdallah taking the first place, and though she broke before reaching the quarter, she was first past the post in 36½ seconds, and at the half, in 1:10½, she led by two lengths, but Sister closed up on her and out-trotted her coming home, winning in 2:23½; James H taking it easy coming in.

Pool selling was at an end before the start for the fourth heat, as it was generally conceded that nothing but an accident would prevent Sister from winning, but this estimate was not sustained by the heat. Magdallah took the lead on the first turn, James H in the second position, Sister third. The quarter was reached in 37 seconds, the leaders flying down the backstretch in 34 seconds, 1:11 to the half. Magdallah and James H were parallel with and Sister three lengths behind. Closing the gap a trifle around the further turn, James H had the heat safe apparently, though it was short lead, as he only beat Magdallah by a length in 2:25. It was somewhat dusk when the harnessing bell rang, and at the expiration of five minutes, had it not been for the white background of the track fence, it would have been difficult for the judges to determine what the horses were doing.

Sister was evidently tired, and the tactics of Goldsmith were to work for a postponement, but it did not avail. The signal was given, and so emphatically that James H broke; the others opened a wide gap, but it was evident, as they flitted down the track, that he was closing. Men huddled in crowds on the stretch to catch a glimpse. They were all together a furlong from home. James H had the lead at the forty-yard mark. He increased it in the last few strides, and came under the wire winner of what can be termed a truly sensational race in 2:26½. The "high rollers" had a heavy fall, the fielders were jubilant; \$30 had won nearly \$300, and the horse with the snakey experiences had gained a grand victory.

Time—2:21; 2:22½; 2:23½; 2:25; 2:26½.

SECOND DAY.

On Friday, the twelfth, the clerk of the weather must have been in a mood to assist the Directors of the State Agricultural Society in carrying out the programme, by vouchsafing a temperature that was all that could be desired. In place of the anticipated scorching sun, there was a pleasant breeze, and though the morning might be a trifle chilly, it would be a hypercritical person who could find fault with the rest of the day. The ladies' grand tournament was to have taken place in the forenoon, but owing to a misunderstanding only three appeared, and it was postponed. The bill was entirely running—four races being on the card. The first race was the Introduction Stakes for two-year olds, a dash of three quarters of a mile. There were seven entries, three of which staid in. These were Mischief, Arthur H, and Estill. The latter was so great a favorite that in the pool sales Thursday night he brought \$50 to \$14. This was mainly owing to his fine races at Santa Rosa, Petaluma, and Oakland, and being a big strapping colt, he is better able to handle the weights than his lighter

competitors. There was some betting on second place, but not enough to determine which of the three had the warmest supporters. Arthur H looked much better than he did at Santa Rosa, and Mischief appeared more racing-like, having lost some of the adipose which hindered her in her previous run. In the lottery for positions Mischief drew the pole, Arthur H second, and the favorite outside. The start was from the quarter-pole, which being at the commencement of the backstretch, there was straight work to begin with. A good deal of time was occupied in getting them off, though when the flag fell all were closely together. Mischief had a trifle the best of the start, and she retained the lead for a furlong, when Arthur H moved up; Estill two lengths behind at the quarter, in twenty-five seconds, but in the next three hundred yards he closed the gap, and at the half-mile pole all were abreast. From thence home Estill had it all his own way, winning by several lengths in the fast time of 1:15½; Arthur H second, and Mischief at least four lengths behind him.

SUMMARY.

AGRICULTURAL PARK COURSE, SACRAMENTO, September 12, 1884.—Introduction Stakes for two-year olds. \$25 entrance; \$10 forfeit; \$200 added; \$50 to second horse; \$25 to third; three quarters of a mile. Value to the winner, \$240.

W. M. Murray's ch. c. Estill, by Norfolk; dam, Lady Jane; 100 lbs.Duffy 1
Hill & Gries' b. c. Arthur H, by Hockhooking; dam, Maid of the Mist; 110 lbs.Appleby 2
James Mee's ch. f. Mischief, by Thad Stevens; dam, Katie Pease; 107 lbs.Ross 3

Time—1:15½.

The second race was the California Derby, and of eleven nominations only two came to the post. These were Prince of Norfolk and Philip S. The former was so much the favorite as to bring \$50 to \$10, and even at these long odds speculation was languid. The Prince of Norfolk drew the inside, and from some incomprehensible cause to the lookers-on the start was delayed, although both came to the line together several times. When the flag fell there was no perceptible difference and they ran together, Prince only leading a head at the half mile in 52½ seconds. When the three quarters had been run Philip S took the lead, opening a long gap. As the mile was completed in 1:46 it was supposed that this was only on sufferance, and that the hitherto unbeaten colt could close any sort of a space whenever he chose to, but it was evident to those who had glasses that the favorite was in trouble, and the most that he could do was a lumbering, slow gallop, twenty or more lengths behind Philip S, who won in the slow time of 2:45. Such an exhibition could only be caused by a lamentable lack of condition or absolute sickness. On other grounds, in place of rating as the peer of any three-year old in the United States, Prince of Norfolk must be considered an arrant impostor.

SUMMARY.

AGRICULTURAL PARK COURSE, SACRAMENTO, September 12, 1884.—California Derby, for three-year olds; \$50, p. p.; \$30 added; \$100 to second; \$50 to third; dash of one mile and one half. Value to winner, \$950.

P. Siebenthaler's b. c. Philip S, by Leinster; dam, Lily Simpson; 118 lbs.Duffy 1
M. M. Allen's ch. c. Prince of Norfolk, by Norfolk; dam, Marion; 118 lbs.Johnson 2

Time—2:45.

The next race gave promise of more sport. It was termed the Del Paso stake for all ages, heats of three quarters of a mile, in which there were nine nominations, but four were scratched, leaving Jou

Jou, Forest King, Jim Douglas, Bryant W, and Beaconsfield to start. The allotment of positions was in the above order, but the placing in the pools was different. In the pool-rooms Thursday evening the rates were: Forest King, \$50; Jim Douglas, \$40; Beaconsfield, \$31; Bryant W, \$22; Jou Jou, \$14. Before they started the betting rated: Douglas, \$36; Forest King, \$30; the others, grouped in the field, \$32. Again the horses were marshaled at the quarter-pole, and owing to the complete obscuration of the starting point by the cumbrous judges' stand, which is directly in front of the reporters' quarters, the incidents of the start were hidden effectually. It was by crowding into the northern corner that the knights of the pencil could catch a glimpse of the horses. When the white flag was dropped all were in a bunch, and they ran so evenly for the first quarter that it was extremely difficult to place them at the half-mile pole further than to note that Jim Douglas and Jou Jou were in the lead of the others, with Jou Jou slightly in advance. Around the turn there was a dropping back of the others, Jim and Jou Jou reaching the three-quarter pole in close proximity. At that point Jou Jou gave up, and Forest King came with a rush. The big horse was running easily, however, and came from the seven furlong well in hand, winning a very good race, the pace being fast from the start to finish, in 1:15; Forest King second, Beaconsfield third, Jou Jou fourth, and Bryant W distanced.

The Second Heat—After the heat there was some very heavy betting. Forest King was slightly the favorite, bringing \$330, Jim Douglas \$300, the field \$200. This was accounted for when Howson mounted Douglas, when, on trotting him, he was seen to be lame so as to make his winning extremely doubtful. This was fully proved, as soon after the start, all being in a line, when the flag fell, he fell in the rear, Forest King and Jou Jou going past the half-mile pole so nearly together that it was hard to separate them. Beaconsfield was two lengths in the rear, going easily, however, and half way around the lower turn he moved up, until within one hundred and fifty yards from home, it was a pretty contest between Forest King and Beaconsfield. But from there the fine looking son of Hockhocking left his competitors, winning by two lengths, in 1:15½; Forest King second, Jou Jou third, Jim Douglas fourth.

The betting now was \$80 on Beaconsfield to \$75 on the field. It was heartless to start Douglas on another heat, as he could only hobble. When the word was given Beaconsfield and Jou Jou were some two lengths in advance of Forest King, who took the place of Jou Jou coming down the homestretch, but could not get nearer than four lengths of Beaconsfield, who was hailed winner of the heat and race in 1:16¼.

SUMMARY.

AGRICULTURAL PARK COURSE, SACRAMENTO, September 12, 1884.—Del Paso stake; for all ages; \$50 entrance, \$15 forfeit, \$250 added; \$75 to second, third saves stakes; three-quarter mile heats. Value to winner, \$360.

E. J. Baldwin's b. c. Beaconsfield, 3 years, by Hockhocking; dam, Aileen Alannah; 109 pounds	Appleby	3	1	1
S. J. Jones' br. h. Forest King, 5 years, by Monday; dam, Abbie W; 113 pounds;	Duffey	2	2	2
Howson & Densdale's b. h. Jim Douglas, by Wildidle; dam, Yolon; 113 pounds;	Howson	1	4	4
W. Kelly's b. g. Jou Jou, 3 years, by Monday; dam, Plaything; 106 pounds	Ross	4	3	3
T. H. Williams, Jr.'s, blk. h. Bryant W, 4 years, by Monday; dam, Babe; 113 pounds;	Johnson	dis.		

Time—1:15; 1:15½; 1:16¼.

Then came a selling race for a purse of \$200, one and one eighth miles. The conditions were that horses priced at \$1,000 should carry the rule weight, with two pounds added for each \$100 of a higher valuation, and one pound subtracted for each \$100 of a lower valuation. The starters were Belshaw, value \$400, one hundred and three pounds; Certiorari, \$500, one hundred and five pounds; Rondo, \$350, one hundred and two pounds; Duke of Monday, \$800, one hundred and eleven pounds; Nick of the Woods, \$1,000, one hundred and eighteen pounds; Bessie, \$400, one hundred and three pounds; Jocko, \$1,000, one hundred and eighteen pounds; Ariola, \$400, ninety-three pounds; and Balboa, \$1,000, one hundred and eighteen pounds. The above is the order they were awarded positions. Belshaw was the favorite, bringing \$150; Duke of Monday, \$100; field, \$140. There was a bobulation at the starting point. The flags fell, and away went the horses. Rondo led like a wild horse with something under a red jacket close on him. The field was straggled over a hundred yards. As they strung along the backstretch, Duke of Monday came with a rush from some point. He was two lengths in front of Belshaw when he run under the wire, and his backers were jubilant over money won. The watches marked 1:58½. There was a terrible muddle. The jockeys were not allowed to dismount, but what the trouble was there was no means of finding out in the reporter's stand. Again the horses were taken to the starting point. The claim was that the starter had not dropped his emblem of authority and his assistants had lowered that in his charge without authority. This time all of them fell, and Ariola rushed away with the lead, his stable companion, Bessie, next. There was a wide gap at the half-mile pole. Then Bessie closed, and again Duke of Monday repeated his tactics. He was first under the wire, with Bessie second, Jocko third. Time, 2:01.

SUMMARY.

AGRICULTURAL PARK COURSE, SACRAMENTO, September 12, 1884.—Selling; purse, \$200; entrance free; second horse, \$50. Fixed valuation, \$1,000; two pounds off for each \$100 below, and two pounds added for each \$100 above fixed value. One mile and one eighth.

Time—2:01.

THIRD DAY.

On Saturday the parade was a very fine display of stock, and, though thoroughbreds and roadsters were not in great force, as in preceding years, the deficiency was amply made up by the fine show of draught and carriage stock and cattle. Among the roadsters were some fine specimens, and though fewer in number than in former years, the quality was good. The cattle were remarkably fine, and

the line of animals extended a mile and a quarter. The weather was beautiful, and the afternoon very pleasant. The first race on the card was for a purse of \$1,000 for four-year olds. The starters were Happy Jim, Ha Ha, Regina, and Thapsin. The placing was in the above order. In the pools Thapsin was so largely the favorite as to bring \$50 to \$15 on all the others. There were four ineffectual scores, but the fifth resulted in a good start. Thapsin broke where the carriages had made a line across the track, and Regina took the lead, with Ha Ha next. In this position the quarter was passed in forty seconds. Just before reaching the half-mile pole Ha Ha broke, and Thapsin came second in 1:16. Rounding the turn Thapsin overhauled Regina, Ha Ha also passing her on the stretch. Thapsin won the heat with comparative ease in 2:30½, Ha Ha second, Regina third, Happy Jim distanced. A good start was made for the second heat. At the second score Thapsin led, and thereafter all the way round—Regina second—to the head of the stretch, when Ha Ha passed her; that being the order in which the heat was finished. Time, 2:30. It was apparent that, barring accidents, Thapsin must win, and this was shown on the deciding heat, Thapsin being first all around, passing the quarter in 39½, half in 1:14½, mile in 2:28½; Ha Ha pressing him at the finish.

SUMMARY.

AGRICULTURAL PARK COURSE, SACRAMENTO, September 13, 1884.—Purse, \$1,000; four-year old class.

Thapsin, blk. g., by Berlin—E. H. Miller, Jr.	W. F. Smith	1	1	1
Ha Ha, br. s., by Nephew—Fred. Arnold	Parker	2	2	2
Regina, br. m., by Electioneer—Jas. Garland	Goldsmith	3	3	3
Happy Jim, ch. c., by Brigadier—J. F. Shaeffer	Trefry	dis.		

Time—2:30½; 2:30; 2:28½.

The second race was for the annual two-year old stake. The starters were Lohengrin, Addie E, and Stamboul. Lohengrin was the favorite, at odds of \$50, \$40, and \$25. When the word was given all were together. Immediately after Lohengrin broke, Stamboul taking a strong lead at the quarter in forty seconds. Lohengrin made several breaks. Stamboul broke before reaching the half mile, but was so far in advance that it did not jeopardize his chances for the heat, which was won in 2:37½; Addie E distanced. Pools sold at \$240 on Stamboul, \$65 on Lohengrin. The heat and race were won on the next trial by Stamboul in 2:37½.

SUMMARY.

AGRICULTURAL PARK COURSE, SACRAMENTO, September 13, 1884.—Annual two-year old stake; \$675, with \$500 added.

Stamboul, b. c., by Sultan—L. J. Rose	Mayburn	1	1	
Lohengrin, b. c., by Echo—Rancho del Paso	Dewan	2	2	
Addie E, ch. f., by Algona—J. N. Ayres	Ayres	dis.		

Time—2:37½; 2:37½.

The great event of the day was the 2:27 class, for a purse of \$1,200, and in which were fourteen entries. This brought out some heavy betting. Friday night pools ranged from \$200 to \$800, and there was a great deal of speculation on the ground. When the bell summoned them, the rates were: Sister, \$250; B B, \$85; Adair, \$50; the others grouped in the field at \$65. The placing was: B B first, Olivette second, Tump Winston third, Adrian fourth, Anteeo fifth, Scandinavian sixth, Adair seventh, Huntress eighth, and Sister ninth. This

large field was difficult to manage, coming up again and again, not only straggling, but some of them galloping. After scoring five times an order was given to score by the pole horse, and then it took three trials to get them off. The start was very good for the number, all of them trotting, though there was quite a difference between the leaders and those behind. Adair pushed to the front at once, followed by Olivette, and was at the quarter in 37 seconds, several lengths in front of Olivette. The others were steering out, and when opposite the half-mile mark in 1:11½, Adair was four lengths in front of Olivette, Sister third, Scandinavian fourth, the balance far behind. Rounding the upper turn, Sister passed Olivette, but Adair was so far in the lead that it was beyond expectation that he could lose the heat. Goldsmith, too, appeared to be contented to obtain a good place for the next heat, and wisely restrained his mare after he saw he could not win. Adair was driven in leisurely, winning in 2:23; the others in the order named—Sister, Olivette, Scandinavian, Tump Winston, Huntress, B B, Anteeo, Adrian.

The pools now ranged: Sister, \$100; B B, \$57; Adair, \$55; the field, \$30. At the sixth score they were off, Adair leading, closely pressed by Sister, and Olivette some lengths behind. The quarter was passed in 37 seconds. At the half-mile in 1:10½. Adair and Sister were locked, and with the disadvantage of the outside position, she came within a neck of him. When they straightened into the run home at the seven furlong, Adair broke, losing so much ground that he was passed by Sister, B B, and Olivette, Sister winning with something to spare in 2:23½; B B second, Olivette third, Adair fourth, Scandinavian fifth, Huntress sixth, Adrian seventh, Anteeo eighth, and Tump Winston ninth.

In the pools now Sister brought \$100; B B, \$60; the field, \$35. At the twelfth score the start was given, when Sister took the lead, followed by B B, with Olivette close behind, the others straggling. B B reached the quarter first in 36½ seconds, and all the way down the backstretch there was an animated struggle between B B and Sister. He had taken the track, compelling her to pull to the outside and reaching the half-mile first in 1:11. From thence Sister improved her position, and at the seven furlong post carried B B to a break. This ended the fight, the positions at the finish being: Sister first, B B second, Olivette third, Tump Winston fourth, Adrian fifth, Huntress sixth, Adair seventh, Scandinavian eighth, Anteeo distanced.

With two heats to her credit Sister was still more of a favorite, and unless she "came back," it was evident that the race was hers. Adair had shot his bolt in the first and second heats; B B could not keep up his rate as well as the mare, and none of the others had speed enough, so the fourth heat brought the race to a close. Sister was too much for B B, by the time the homestretch was gained, and though Scandinavian came with a rush toward the finish, the pace carried him off his feet, and though he was second under the wire he was placed third.

Time—2:23; 2:23½; 2:25; 2:24.

FOURTH DAY.

On Monday, the fifteenth, the track was in the best possible condition when the first race was called, which was the Maturity stake for four-year olds, a dash of three miles. For this William Boots' colt Padre had a walkover—Lucky B, Gano, and Augusta E paying forfeit.

SUMMARY.

AGRICULTURAL PARK COURSE, SACRAMENTO, September 15, 1884.—Maturity stake, for four-year olds; \$100 entrance, \$25 forfeit; \$300 added; three-mile dash; four nominations.

Wm. Boots' b. c. Padre, by Thad Stevens, dam Gypsy, 118 lbs. walkover.

The second event was the Premium stake for all ages, three quarters of a mile. There were ten nominations, three of which appeared—Dotty Dimple, Blue Mountain Belle, and Premium. Premium brought \$100, Blue Mountain Belle \$50, Dotty Dimple \$27, in the pools before the start. There was a delay at the start and six break-aways before the flag fell. Premium was a length behind, but the pace was so slow that it was no great disadvantage. They did the first quarter in 25½ seconds, all being abreast, and rounding the further turn it was impossible to tell which had the best of it. At the seven furlongs Premium was slightly in advance, Blue Mountain Belle dropping back. From there the race was between Dottie Dimple and Premium, the latter winning in the slow time of 1:17½, the Oregon mare far in the rear.

SUMMARY.

AGRICULTURAL PARK COURSE, SACRAMENTO, September 15, 1884.—Premium stake for all ages; \$25 entrance, \$10 forfeit; \$200 added; \$50 to second, and \$25 to third; three-quarters of a mile; ten nominations.

Rancho del Paso's ch. m. Premium, aged, by Castor, dam by Flying Cloud, 115 lbs.	Duffy	1
Hill & Gries' blk. m. Dotty Dimple, 4 years, by Ben Wade, dam unknown, 115 lbs.	Appleby	2
S. J. Jones' br. m. Blue Mountain Belle, aged, 115 lbs.	Carter	3

Time—1:17.

The California stake was the next event for decision. This was for two-year olds, and of thirteen nominations three came to the post—Mistletoe, Mischief, and Harry Peyton, placed in the order named. Peyton was the favorite, at \$150 to \$50 for each of the others. They were off at the first attempt, Mistletoe going away with a strong lead, Mischief second, until near the quarter pole, when Peyton moved into second place. The pace was slow, the quarter being passed in

29½ seconds and the half in 56½. They were all together rounding the upper turn, but when fairly in the stretch the favorite came away and won very easily in 1:48½, Mischief second.

SUMMARY.

AGRICULTURAL PARK COURSE, SACRAMENTO, September 15, 1884.—California annual stake for two-year olds; \$100 entrance; \$25 forfeit; \$250 added; \$100 to second horse and \$50 to third; one mile; nineteen nominations.

S. B. Wright's b. c. Harry Peyton, by Shannon, dam Miss Peyton, 110 lbs.	Appleby	1
James Mee's ch. f. Mischief, by Thad Stevens, dam Katie Pease, 107 lbs.	Ross	2
James Mee's ch. f. Mistletoe, by Thad Stevens, dam Mistake, by Wildidle	Long	3

Time—1:48½.

Then came the handicap \$50 stake, \$25 forfeit, two and a quarter miles. The starters were Birdcatcher, who was the favorite at \$250, Billy the Kid at \$150, and Bachelor at \$40. Again there was delay at the post, and immediately after the flag fell Billy the Kid rushed to the front, followed by Bachelor, Birdcatcher trailing. The stand was passed in the above order in 27 seconds, the half mile in 55½, the three-quarters in 1:22½, still without change of positions. At the stand the second time, in 2:18, Bachelor had closed a trifle in the lead, and when about half way around the turn Birdcatcher made his run. He followed and fell back again, endeavoring to reach the leaders on the backstretch. The mile and three-quarters was made in 3:11½, Billy about a length in front of Bachelor, who was a trifle more than that in front of Birdcatcher. There was a closing up on the northern semicircle and a volume of cheers from stand and stretch when it seemed that there was a likelihood of a race home. Bachelor, however, was unable to concede eleven pounds to Billy, and though he ran gamely was beaten by two lengths, and there were four between him and Birdcatcher. Time—4:03½.

SUMMARY.

AGRICULTURAL PARK COURSE, SACRAMENTO, September 15, 1884.—Free handicap stake; \$50 entrance; \$25 forfeit; \$15 declaration; \$350 added; \$75 to second horse, and third to save stake; two and one quarter miles; eight nominations.

G. L. Richardson's b. g. Billy the Kid, aged, by Leinster, dam Lily Simpson, 108 lbs.	Howson	1
Hill & Gries' b. c. Bachelor, 3 years, by Hockhocking, dam Maid of the Mist, 105 lbs.	Appleby	2
Caleb Dorsey's br. h. Birdcatcher, 5 years, by Specter, dam Pet, 110 lbs.	Duffy	3

Time—4:03½.

Heats of a mile was next on the programme. The starters were Amanda L, Patsy Duffy, Jou Jou, and Philip S. The positions were in the above order. Patsy was the favorite, at the rate of \$90 on him to \$72 on the others. Time enough was frittered away before the start to try the patience of the spectators, and there were six false starts before the flag fell. Then Amanda L had the advantage, retaining the lead at the quarter, in 27½ seconds, and the half in 54 seconds. Patsy Duffy had been running in second place one length behind Amanda, with Philip S on his quarter and Jou Jou bringing up the rear. All were bunched when coming around the turn, and at the entrance to the homestretch it was impossible to tell which was leading. At the seven furlongs Jou Jou shot in front, and from there had it all his own way, crossing the score two lengths in front of Philip S, Patsy three lengths further back, and Amanda just inside the distance. Time, 1:45½.

Jou Jou's victory had little effect on changing the rates, Patsy bringing \$100 to \$87 on the others. When the start was given Patsy Duffy cut across Jou Jou, and took the lead, Philip S running into second position. The pace was faster than before, as the quarter was made in 26 seconds. Down the backstretch Patsy and Philip S ran locked, Jou Jou some lengths behind. The half mile was passed in 51½ seconds. Looking through the glass, it was evident that Jou Jou was running easily, and this was fully proved when they reached the seven furlong mark, as from there he galloped in in the fast time of 1:43, Patsy Duffy second.

SUMMARY.

AGRICULTURAL PARK COURSE, SACRAMENTO, September 15, 1884.—Free for all ages; purse, \$300; \$50 to second horse, and \$25 to third. One mile and repeat.

-----	Howson 4 4

Time—1:45½; 1:43.

FIFTH DAY.

Tuesday was a grand morning, the sun breaking over the top of the Sierras and bathing the valley in radiance, while the sides of the mountains were in shadow. There was not a breath of air, though as the day progressed there was a light breeze which tempered the atmosphere so that the most fastidious could not find fault. There was a large attendance at the Park in the morning, and a very large one in the afternoon. The morning attraction was a grand stock parade, and the people were unanimous in pronouncing it the finest exhibition of cattle ever seen in California, and it is doubtful if it could be surpassed in the United States for rarity. There were Short-horns, Herefords, Devons, Holsteins, Ayrshires, and Jerseys, and then came the Polled Angus, which were admired by all butchers for evidences of their prime beef qualities, by stock men for their general adaptability to all countries, while the masses admired them for their unequalled beauty. Draft horses were well represented, and there were a few fine animals among the thoroughbreds and trotters.

The first race in the afternoon was a purse of \$1,000 for three-year olds. The starters were Robert Lee, Antevolo, Leleap, Pope Leo, and Voucher. Antevolo was a great favorite, bringing the night previous \$100 to \$30 on all the others, and after winning the first heat it was \$100 to \$9 on him, but the loss of the second heat, to Voucher, brought the field up to \$40 against \$100 on the favorite. With the exception of the second heat, description of the race is unnecessary, further than reference to the summary, as Antevolo took the lead at the start and never lost it, coming home at his ease. In the second heat Leleap took the inside position on the first turn until near the half-mile post, Antevolo going along leisurely behind. He went to the front at the half-mile, Voucher coming up at the three-quarters, and fairly out-trotted Antevolo home.

SUMMARY.

AGRICULTURAL PARK COURSE, SACRAMENTO, September 16, 1884.—Trotting; purse, \$1,000; three-year old class.

Pope Leo, g. c., by Romero—Charles Thomas	Goldsmith	5	dis.		

Time—2:37½; 2:32½; 2:34½; 2:34.

The second race was the three-minute class, for a purse of \$1,200. The starters were Col. Hawkins, Le Grange, Menlo, Guy Wilkes, and Blanche, and in the order of starting as was written. Guy Wilkes was an immense favorite, bringing \$360 to \$30 on all the others. After the first heat, which was won by Guy Wilkes in 2:23, it was so evident that the race was all in his favor that he was left out of the pools, the issue being on the second place, and then Blanche and Menlo together brought \$300, Col. Hawkins \$105, and Le Grange \$100. As Guy Wilkes won the second heat in 2:23½, fully as easily as the first, there was little interest in which would win, but as Le Grange came in second wagering on positions became somewhat complicated, but the third heat ended the trouble, as Guy Wilkes won as handily as before. Though there was a sharp struggle for second place, Le Grange apparently had it safe until he broke, and Col. Hawkins beat him in. This gave Le Grange second money, Blanche third, and Col. Hawkins fourth.

Time—2:27; 2:24; 2:30½.

SIXTH DAY.

A continuation of glorious weather and an increased attendance were the salient features of Wednesday at Agricultural Park, outside of the races. It was a running day, and there was the buzz of life in the stands long before the hour fixed for starting. The pool-sellers

were busy, and as the sleek-coated animals took their preliminary gallops, many glasses were turned on them, and the clinking of timing watches was heard on every side at anticipation brushes of a furlong. The first race was the Orange Stakes, for two-year old fillies, a dash of five eighths of a mile, in which there were four starters—Mischief, Electress, Belle of the Lake, and Laura T. The positions were drawn in the above order, Laura T leading in the pools. She brought \$35, Belle \$30, the field \$23. A very good start was given at the second attempt, Mischief taking the lead and never losing it, winning quite handily. The positions of the others were as in the summary.

SUMMARY.

AGRICULTURAL PARK COURSE, SACRAMENTO, September 17, 1884.—The Orange Stake; for two-year old fillies; \$25 each; \$10 forfeit; \$150 added, of which \$50 to the second; five furlongs. Closed with six nominations. Value to winner, \$220.

M. Storn's b. f. Belle of the Lake, by Wheatley; dam, Jeannette	2
G. W. Trahern's ch. f. Laura T., by Joe Daniels; dam, by Norfolk	3
Wm. Boots' ch. f. Electress, by Bob Wooding; dam, Electra	0

Time—1:05.

The second race was the Breeders' stake, for three-year olds, one and one half miles. There were seventeen nominations, only four of which appeared. These were Rustler, Cyclone, Schoolgirl, and Hirondelle. The latter named couple are representatives from Rancho del Paso, and in the pools they brought \$200 to \$45 on Rustler and Cyclone combined. The starting point was at the half-mile post, and a very good start was effected without breaking away. Rustler led, and was first at the stand in 53 seconds, Schoolgirl second. Making the turn Schoolgirl and Hirondelle passed Rustler, and before reaching the half-mile post Hirondelle took the lead. The mile was run in 1:46½, and the Rancho del Paso pair had only a gallop, concluding with Hirondelle first, Schoolgirl second, Cyclone third. Time, 2:46½.

SUMMARY.

AGRICULTURAL PARK COURSE, SACRAMENTO, September 17, 1884.—The Breeders' stake, for three-year olds; \$50 each, p. p.; \$300 added; second horse, \$100; third, \$50. One mile and a half. Seventeen nominations. Value to winner, \$1,000.

Wm. Boots' b. c. Rustler, by Thad Stevens; dam, Gypsy	0

Time—2:46½.

The third race was a selling race, one and three eighths miles, in which there were seven starters: Philip S, Certiorari, Ariola, Cyclone, Rondo, Patrol, and Duke of Monday. The positions were awarded in the above order. In the pools Duke of Monday brought \$120, Patrol \$65, \$62 on the field. The betting was very lively. There was a long delay at the starting point, several breakaways, and finally the red flag fell, while the timing flag was not lowered. One horse was far back of the starting line. All were struggling and only three kept on. The jockeys, remembering what had taken place before, pulled up, leaving Appleby on Patrol, Patsy Duffy on Duke of Monday, and Luke on Ariola to have the race to themselves. Patrol led to the stand, Duke of Monday two lengths behind, Ariola three in the rear of the second. There was no change in positions, though the

favorite moved up closer on the backstretch and at the finish of the mile, in 1:47, was lapped on the leader, notwithstanding vigorous efforts on the part of the rider of the favorite. Patrol won by an open length; Ariola three lengths behind the Duke; as the others did not run the course no time was announced by the judges, private timers making it 2:26.

SUMMARY.

AGRICULTURAL PARK COURSE, SACRAMENTO, September 17, 1884.—Selling purse, \$250. Entrance free, for all ages; \$50 to second horse. Fixed valuation, \$1,000; two pounds off for each \$100 below, and two pounds added for each \$100 above fixed value. One and three eighths miles.

W. L. Appleby's b. h. Patrol, by Wildidle; dam, Nettie Brown, 5 years, \$1,000, 115 pounds.....	Appleby	1
Rancho del Paso's b. g. Duke of Monday, by Monday; dam, Demirep, 5 years, \$800, 111 pounds.....	Duffy	2
Wm. Boots' b. g. Ariola, by Bob Wooding; dam Gladiola, 3 years, \$400, 93 pounds.....	Flowers	3

The others did not run the course, and no time was given.

The fourth race was heats of one and one half miles for a purse of \$400. Only two horses appeared, Patsy Duffy and Garfield. Patsy was the favorite at odds of \$100 to \$45. Garfield had a trifle the best of the start and made the running. He was a length in the lead at the stand in 55½ seconds, and by half a length at the completion of the first mile in 1:48. Patsy moved closer on the semicircle, and was head and head at the three-quarter post. The finish was close, Patsy winning by a short neck in 2:41½. The odds increased on Patsy to \$110 to \$17 on Garfield. The start was even and the whole run very even. Garfield was outside of Duffy, ran parallel and was not a foot behind until one and a quarter miles had been made. A sheet would have covered both horses until that time, when Patsy drew away slightly, winning by half a length in 2:41.

SUMMARY.

AGRICULTURAL PARK COURSE, SACRAMENTO, September 17, 1884.—Free purse, \$100. For all ages; \$100 to second; \$50 to third. One mile and a half and repeat.

Time—2:41½; 2:41.

The finishing race for the afternoon was a special purse for named two-year olds. Starlight, Piedmont, Sur Del, and Addie E started. Addie E won so easily in 3:06 that a description of the first heat is unnecessary, Sur Del second, Starlight third, and Piedmont last. In the second heat she took the lead, but breaking badly on the backstretch, Sur Del passed her. She broke again on the turn, but had speed enough to overtake her competitor and beat him home, Starlight third, and Piedmont fourth. Time, 3:05½.

SUMMARY.

Piedmont, ch. c., by Tilton Almont; Wm. Billups.....	4	4

Time—3:06; 3:05½.

SEVENTH DAY.

On Thursday the first race was the 2:22 class, and this was looked on as one of the greatest events of the fair. There were six entries, five of which started. These were Vanderlynn, Allen Roy, Brigadier, Albert W, and Manon. The positions assigned were in the above order, Manon being a great favorite with the speculating division, so much so as to bring \$100 to \$30 on Brigadier, and all the others combined \$15. The favoritism partly came from the success Manon has had in former races, and more especially from the fact that there is a great deal of money back of whatever Goldsmith drives, but the rates should be nearer even when the entire guide was the performance of the horses, and there was nothing to warrant such one-sided wagering. A very good start was the result of the third score. Brigadier had slightly the lead when the bell struck, and soon after Vanderlynn left his feet, not a bad break, however, and the order at the first furlong was Brigadier, Allen Roy, Vanderlynn, Manon, Albert W. At the quarter in 36 seconds there was no change, and as they sped down the backstretch at a very fast pace the same order was retained. At the three-furlong post Manon broke, which took away her chances for the heat, Brigadier trotting very fast and as steadily as the ticking of a clock. He led two lengths at the half-mile at 1:10½, and came into the homestretch with a good lead, there being no change of positions in those behind him. Coming home Manon passed Vanderlynn, but neither she or Allen Roy could overhaul Brigadier, he passing the winning score three lengths in front of Allen Roy, Manon third, Vanderlynn fourth, and Albert W last. Time, 2:23.

The result of the heat did not, as was anticipated, change the betting to the detriment of Manon, the rates being \$270 on her, Brigadier \$70, field \$20. The pool sellers did a brisk business, and there was an excited crowd surrounding the stand. The scoring was somewhat tedious, there being nine ineffectual attempts before the word was given. The heat proved very exciting until after passing the half-mile pole. Brigadier, having the pole, had an advantage, and as Allan Roy made a bobble as the bell sounded, it gave Manon an opportunity to take second position, and she was at Brigadier's head at the furlong mark. The leaders were together when they reached the quarter in 35½ seconds, and all the way down the backstretch they were so close together as to resemble a pair in harness. The half mile was reached in 1:08, and when the horses were a hundred yards beyond there were cheers and shouts from the backers of Manon as she passed Brigadier and opened a gap of a length of daylight in a few strides. She never surrendered the advantage gained, and jogged leisurely under the wire in 2:21; Brigadier at the wheel, Vanderlynn third, Allan Roy fourth, and Albert W fifth.

The fine performance of Manon in this heat appeared to justify the long odds, as it was palpable that if driven out she could have beaten 2:20. The odds were still longer before the start for the third heat, ruling at \$100 for Manon to \$13 on all the others, and the result of the heat shows that the hopes were founded on stable grounds. Manon had her nose in front from the start to finish. The quarter was passed in 35½, the half in 1:09½, and the mile in 2:21½. Brigadier was a fair second, and Vanderlynn and Albert W came in in front of

Allan Roy, but owing to running were set back, Vanderlynn fourth, and Albert W fifth.

Pool selling was now at an end, and the deciding heat was won also very handily by Manon, her chances never being in jeopardy at any portion of the mile, winning in 2:23½; Brigadier second, Vanderlynn third, Allan Roy fourth, Albert W distanced. This gave Brigadier second money, Allan Roy third, and Vanderlynn fourth.

SUMMARY.

AGRICULTURAL PARK COURSE, SACRAMENTO, September 18, 1884.—Purse \$1,200; 2:22 class.

Manon, b. m., by Nutwood; F. M. Railton	Goldsmith	3	1	1	1
Brigadier, b. s., by Happy Medium; J. B. McDonald	McDonald	1	2	2	2
Allan Roy, g. g., by Patchen Vernon; Jas. McCord	Donathan	2	4	3	4
Vanderlynn, b. g., by Geo. M. Patchen, Jr.; W. W. Stow	Farrell	4	3	4	3
Albert W, b. s., by Electioneer; A. Waldstein	McConnell	5	5	5	dis

Time—2:23; 2:21; 2:21½; 2:23½.

The second race was the 2:40 class for a purse of \$1,200. The starters were Joe Arthurton, La Grange, and James H, with positions as above. Joe Arthurton was the favorite at \$150 to \$70 on James H, and \$16 on La Grange. They were very evenly sent off on the fifth score, James H having about a neck the best of it. All were trotting fast, James H rather outfooting the favorite and gaining the lead enough to take the pole before reaching the quarter, which he made in 35½ seconds. He had a lead of three lengths when he broke, losing so much ground that both the others passed him. At the half Joe was two lengths in front of La Grange in 1:10, the latter breaking on the turn, when James H overtook him, but broke again, Joe Arthurton leaving them and jogging home winner. James H had thrown a shoe, to which was ascribed his frequent breaks. After the heat Joe brought \$150 to \$20 on both the others, varying from that to \$100 to \$32.

There was a good start at the second score, Joe Arthurton and La Grange keeping together, James H making a break on the turn and falling back. Joe Arthurton and La Grange passed the quarter locked in 37 seconds, and were still together at the half-mile in 1:10. From there the pace was slow, Joe winning in 2:26, several lengths in front of La Grange, James H was far behind the distance flag, but the judges deeming that he had not been driven to win, placed him third and substituted another driver.

James Dewan was the driver selected to take the place of Baylis to pilot James H. The change appeared to be favorable, as James H trotted steadily until near the three-quarter pole, when he broke. Arthurton and La Grange trotted side and side to the half-mile in 1:11, but from there the black seemed to tire, Joe winning in 2:28½, La Grange two seconds behind.

SUMMARY.

AGRICULTURAL PARK COURSE, SACRAMENTO, September 18, 1884.—Purse \$1,200; 2:40 class.

Joe Arthurton, b. g., by Arthurton; Wm. Corbett	Goldsmith	1	1	1
La Grange, blk. g., by Sultan; L. J. Rose	Mayburn	2	2	2
James H, b. g.; Geo. Baylis	Baylis and Dewan	3	3	dis

Time—2:25½; 2:26; 2:28½.

A special race for named horses was then called up, but was unfinished when darkness came on.

EIGHTH DAY.

Never before since its erection was the grand stand so packed as it was Friday when the hour came for the ladies' tournament. In places the crowd was so dense that there was no room for another person to stand, and, as a large majority were ladies, the gay colors in the dresses, bonnets, hats, and parasols, brightened the effect. There is a decided charm to visitors from the Bay in the light Summer habiliments which are worn here, and the evident appropriateness for the climate adds to the attraction. The field contained a great number of carriages, while the inner track was crowded with spectators. Seven equestriennes competed, among them being some very good riders. They were designated by numbers, the names being unknown to the judges. The awards were as follows: First premium, Miss Mary McFadyen, Dixon; second, Mrs. E. G. Missner; third, Mrs. F. S. George; fourth, Miss Mamie Best; fifth, Miss Nellie Ryan; sixth, Miss Minnie Elliot; and seventh, Mrs. Jackson, all of Sacramento.

The first race was the Sunny Slope stake, for two-year olds, one mile, with a five-pound penalty on the winner of the Introduction stake. The starters were Alta, Arthur H, and Estill. After the riders were mounted the judges ordered the Marshal to take Alta in charge, and in place of the jockey put up by his trainer, George Howson was substituted. At the first of the pool selling, Estill was the favorite at \$100, to \$60 on Alta and \$12 on Arthur H. A good deal of time was occupied in transferring the charge of Alta, and as evidence that there was some ground for the change, Alta advanced in the pools, at one time selling for as much as Estill. The race was an exceptionally good one. The colts were given a splendid start; not a neck difference when the flag fell. Duffy, on Estill, made the running from his outside position, though Howson kept Alta moving, and the favorite could not take the track. At the quarter, in twenty-five and a half seconds, they were even, and on the backstretch the pace was very fast. Alta had a neck the advantage when passing the half-mile post, in fifty seconds, and from thence home he had a comparatively easy task. Duffy was driving Estill as he could at the seven furlong, Howson sitting quietly, though still opening the gap. Alta reached the score first by two lengths, in the very fast time of 1:42½, Arthur H a fair third.

SUMMARY.

AGRICULTURAL PARK COURSE, SACRAMENTO, September 19, 1884.—The Sunny Slope stake; for two-year olds; \$50 entrance; \$10 forfeit; \$200 added. Second horse, \$75; third to save stake. Winner of Introduction stake penalized five pounds. Winner of California Annual stake penalized five pounds. Winner of both penalized ten pounds. One mile. Four nominations. Value to winner, \$235.

Todhunter & Allen's b. c. Alta, by Norfolk; dam, Ballinette; 110 pounds	1
Wm. Murray's ch. c. Estill, by Norfolk; dam, Lady Jane; 115 pounds	2
Hill & Gries' b. c. Arthur H, by Hoekhoeck; dam, Maid of the Mist; 110 pounds	3

Time—1:42½.

The second race was the Shenandoah stake, for three-year olds, one and a quarter miles. The starters were Bachelor, Jou Jou, and Beaconsfield. They had positions in the above order. The pools sold \$200 on Jou Jou, \$140 on Beaconsfield, and \$37 50 on Bachelor. Again the start was first rate and without any delay. As they swept past the stand, Bachelor and Beaconsfield were even, Jou Jou a length behind. Bachelor had the lead at the quarter-pole in fifty-three sec-

onds, but going down the backstretch Beaconsfield closed on him, and was first at the end of the three quarters, in 1:19. Jou Jou was trailing about three lengths behind, but closed the interval on the turn, and he and Beaconsfield were parallel at the seven furlong, at which point Jou Jou gained the advantage, winning a very good race by two lengths from Beaconsfield, Bachelor third. Time, 2:09½.

SUMMARY.

AGRICULTURAL PARK COURSE, SACRAMENTO, September 19, 1884.—The Shenandoah stake; for three-year olds. Entrance, \$50; \$15 forfeit; \$250 added. Second horse, \$75; third to save stake. Winner of Derby stake penalized five pounds; winner of Breeders' stake penalized five pounds; winner of both penalized ten pounds. One mile and a quarter. Six nominations. Value to winner, \$320.

W. Kelly's b. g. Jou Jou, by Monday; dam, Plaything; 115 pounds 1
E. J. Baldwin's b. c. Beaconsfield, by Hockhocking; dam, Aileen Alannah; 118 pounds 2
Hill & Gries' br. c. Bachelor, by Hockhocking; dam, Maid of the Mist; 118 pounds 3

Time—2:09½.

The third race was the Nighthawk stake, one mile. There were eleven nominations, three of which weighed in—Aunt Betsy, Patsy Duffy, and Forest King, with positions at starting as above. The pools were \$100 on Duffy, \$85 on Forest King, and \$10 on Aunt Betsy. The start was very good. Away went Forest King, and Duffy on his shoulder, the rider of Aunt Betsy pulling her back. There was little difference at the quarter-pole, in twenty-seven seconds, between Duffy and Forest King. Duffy was in front at the one eighth of a mile, in fifty-two and a half seconds. Betsy was three lengths behind Forest King, but moved up at the three-quarter pole, and for a time there was a very fine tussle between the two, Forest King getting the best of his competitor, and galloping in an easy manner, by three lengths. The race for second place was sharp, Aunt Betsy coming up on the inside, beating the favorite half a length. Time, 1:43½.

SUMMARY.

AGRICULTURAL PARK COURSE, SACRAMENTO, September 19, 1884.—The Nighthawk stake; for all ages. Entrance, \$50; \$15 forfeit; \$200 added. Second horse, \$75; third, \$50; \$200 additional if the best time (1:41½) in the State is beaten. Stake to be named after winner if Nighthawk's time (1:42½) is beaten. One mile. Eleven nominations. Value to winner, \$345.

S. J. Jones' b. h. Forest King, by Monday; dam, Abbie W; 118 pounds 1
James Adams' b. m. Aunt Betsy, by Hardwood; dam, Peggy Ringgold; 115 pounds 2
M. M. Allen's b. h. Patsy Duffy, by Leinster; dam, Addie A; 118 pounds 3

Time—1:43½.

The fourth race was a special purse of \$200, dash of a mile. The starters were Bessie, Quebec, Belshaw, and Rondo. In the pools Belshaw brought \$150, Bessie and Rondo \$120, Quebec \$27 50. When the flag fell to a good start, all made the running, and were abreast one hundred yards away. Rondo led at the quarter-pole in 26½ seconds, at the half in 51½ seconds, and came home five lengths in the lead of Quebec, who was as much in front of Bessie, Belshaw last.

SUMMARY.

AGRICULTURAL PARK COURSE, SACRAMENTO, September 19, 1884.—Purse, \$200; for named horses. One mile.

Geo. Howson's ch. g. Rondo, by Norfolk; dam, by Belmont; aged; 115 pounds 1
G. L. Richardson's ch. g. Quebec, by Norfolk; dam, by Rifleman; aged; 115 pounds 2
Wm. Boots' br. m. Bessie, by Hercules; dam, unknown; 4 years; 115 pounds 3
E. B. Johnston's b. g. Belshaw, by Wildidle; dam, Susie W; aged; 115 pounds 4

Time—1:45.

The special trot that was left unfinished on Thursday evening was then called up. It was for a purse of \$360, with Ed, Fred B, Twinkle, Nellie Burns, and Ned engaged. Three heats were disposed of before the postponement.

First Heat—The start was given on the third score, Nellie Burns and Ed evidently having the foot of the party. Nellie broke on the backstretch, when Ed passed her, and she could not recover the lost ground or get a better place than second. Fred B was third, Ned fourth, and Twinkle last. Time, 2:32. Before the start Twinkle was the favorite, at odds of \$50 to \$25 on Nellie Burns and \$27 on the field. After the heat the field sold for \$50, Nellie Burns \$50, and Twinkle \$22.

Second Heat—There was a long delay to repair the harness of Twinkle, and when the word was given Nellie Burns took the lead, retaining it until half way of the homestretch, when she broke, and Ed passed her. He came to the score first, Twinkle second, Nellie Burns third, Ned fourth, Fred B last. Time, 2:32. After this heat the pools sold: field, \$60; Twinkle, \$16; Nellie Burns, \$13.

Third Heat—Nellie Burns took the lead, but broke on the backstretch, when Twinkle went past her. On the further turn Burns came up, but could not reach Twinkle, who won the heat, with Nellie Burns second, Ed third, Ned fourth, Fred B last. Time, 2:30½.

Fourth Heat—When the field was called out on Friday the pools sold: The field (Ed, Ned, and Fred B), \$500; Twinkle, \$50; Nellie Burns, \$27 50. Twinkle took the lead, Burns breaking when a hundred yards, but Twinkle opened a gap, leading at the quarter and half, with Nellie second. The latter broke on the upper turn, and the heat seemed safe for Twinkle, but Ned came fast down the homestretch, overtook Twinkle, carried her to a break opposite the distance post, but then broke himself, and the mare, catching quickly, won the heat in 2:31½, Ned second, Ed third, Fred B fourth, and Nellie Burns last.

Fifth Heat—In the betting Twinkle brought \$200, the field \$55, Nellie Burns \$20. The heat showed a change; Twinkle led past the quarter, when she broke, and Ned went by her. He trotted very steady, making the half mile in 1:15, and from the turn he had it all to himself, winning in 2:31½; Ed second, Twinkle third, Fred B fourth, Nellie Burns distanced. Under the rules only winners of heats could start in the sixth heat, which put Nellie Burns and Fred B out of the race. In the pools Twinkle brought \$200, the field \$205, with an anxious crowd around the pool stand eager to invest.

The sixth heat was a very close thing between Ned and Twinkle until a short distance beyond the quarter-pole. The mare broke and lost a deal of ground, Ned winning by a long way, with Ed second, Twinkle third. Time, 2:29½.

Seventh Heat—The field now brought \$240, Twinkle \$95. Twinkle was tired, and Ned appeared to be getting better as the race progressed. Ned made a bad break on the turn, and Twinkle took the lead going down the backstretch, there being a long gap at the half mile and three-quarters, and came home far in the lead in 2:35; Ed second, Ned third.

NINTH DAY.

The closing day brought a continuation of the remarkably fine weather that had prevailed from the commencement. The attendance was fair, though smaller than the preceding days, many visitors having left on the Saturday train. In the morning occurred the stock parade, in which were displayed the premium ribbons. In the afternoon the first on the programme was a yearling trot, in which started Transit, Trovato, Senator, and Rajah. The positions were as above, and in the pool sales Transit brought \$80, Rajah \$40, and the field \$24. The start was even, the favorite taking the lead and retaining it until after passing the half-mile in 1:27½. Soon afterward he broke, when Senator passed him, and at the three-quarters Rajah had the lead. From thence the strife was between Transit and Rajah, but, Transit breaking at the distance, Rajah came away and won by three lengths; Transit second, Senator third, Travato last. Time, 2:55, which is the fastest record ever made by a yearling in an actual race.

SUMMARY.

AGRICULTURAL PARK COURSE, SACRAMENTO, September 20, 1884.—Trotting, yearling class. Purse, \$200; one mile.

C. F. Taylor's ch. c. Travato, by Sterling; dam, by Flaxtail.....	Smith	4

Time—2:55.

The second race was for two-year olds, heats of a mile. The only starters were Lohengrin and Kismet. Kismet was so greatly the choice as to bring \$200 to \$24 on Lohengrin. Kismet had a slight advantage when the bell sounded, while Lohengrin made up and took the lead on the turn, and, notwithstanding a couple of breaks, he was two lengths in the lead at the quarter-pole in 40 seconds, but making a bad break Kismet was at the half-mile first in 1:17½. From thence Kismet never lost the advantage, winning by three lengths in 2:36½. The second heat Kismet was driven to beat the two-year old stallion record, 2:32½, which stood to the credit of Steinway. This he succeeded in accomplishing very handsomely, going to the quarter in 39 seconds, to the half in 1:16, and the mile in 2:30½.

SUMMARY.

AGRICULTURAL PARK COURSE, SACRAMENTO, September 20, 1884.—Purse, \$1,000. Two-year old class; mile heats.

 Rancho del Paso's b. c. Lohengrin, by Echo; dam, Vixen, by George M. Patchen, Jr. Dewan 2 2

Time—2:36½; 2:30½.

One of the most attractive races in the meeting was the 2:30 class. There were fourteen entries, but owing to casualties a majority of them were unable to participate; and besides accidents and a lack of condition, there was a terror to owners in the form of Guy Wilkes, who had shown great speed, endurance, and reliability in an eminent degree. This narrowed the field of starters to five, drawing the following positions: Olivette first, Guy Wilkes second, Adair third, Colonel Hawkins fourth, and Adrian on the outside. Owing to his conceded superiority, Guy Wilkes was left out of the pools, the second or better place in the race governing the winner. The rates were Adair \$50, Olivette \$16, the field \$5.

First Heat—It is seldom that a better heat is seen than the first heat proved. The horses were bunched as they got off, Olivette and Colonel Hawkins leading, with Wilkes partly pocketed and Adair a short distance in the rear. Passing the quarter, Olivette, Guy Wilkes, and Adair were close together, and for part of the way down the backstretch it was as pretty a race between the trio as could be desired. Finally Olivette broke and Guy Wilkes and Adair went by the half-mile post head and head in 1:11½. Rounding the turn Guy Wilkes drew away from Adair and came into the homestretch with a lead of two lengths. He seemed to have the heat safe at the seven-furlong pole, but Adair was coming fast, and one of the most exciting trotting finishes of the meeting was witnessed. Goldsmith found it necessary to use every art to increase his speed, and Smith, behind Adair, was not idle. Forty yards from the winning score Adair's head was on the hip of Guy Wilkes; at twenty yards his nose was on the girth of the leader, and under the wire a short neck was all that the stallion led him. Olivette was third, Colonel Hawkins fourth, Adrian distanced. Time, 2:23.

Second Heat—As no one anticipated that Guy Wilkes could be brought to a drive to win, the second heat was looked for with more anxiety, and a few were sufficiently sanguine to predict that Adair would win one game in the long rubber, and the result showed that these were not very far wide in their calculations. At the third score a very good send-off was had, Adair slightly leading when the bell sounded. Guy Wilkes led him by a neck at the quarter-pole in 36½ seconds, and increased his lead at the half in 1:10 to a length. Going around the turn he gained still more, and at the head of the homestretch looked all over a winner, but again Adair came up. Wilkes made a slight hobble when half way home, and after that there was a repetition of the finish in the former heat, excepting that Adair got his nose in front as the goal was reached. Both broke when within a length of home, and Olivette came in a good third in the fast time of 2:21.

Third Heat—Speculation was laggard after the first heat, and when a few pools were sold the only wagering was in the mutual box. At the start in the third heat Guy Wilkes rushed off at a very rapid pace, taking the lead on the first turn and never losing it to the finish.

Adair made a bad break after passing the half-mile post, destroying all his chances for the heat. Wilkes was at the quarter in $36\frac{1}{2}$, at the half in $1:10\frac{1}{2}$, and the mile in $2:24\frac{1}{2}$; Adair second, Olivette third, and Colonel Hawkins last.

The fourth heat put an end to the controversy, as Wilkes again went to the front and kept it from start to finish, passing the quarter in 37 seconds, the half in $1:11$, and the mile in $2:23$; Adair second, Olivette third, and Colonel Hawkins fourth.

Time— $2:23$; $2:21$; $2:24\frac{1}{2}$; $2:23$.

The free-for-all purse, \$1,500, was the concluding race of the series. There were five entries, three of which came to the post—Vanderlynn, Albert W, and Bay Frank. In the pools Vanderlynn brought \$50, Bay Frank \$45, Albert W \$20. There was a good deal of time taken up in scoring, and when the word was given all were nearly abreast. Albert W broke before going fifty yards, and Vanderlynn at the furlong mark. This enabled Bay Frank to take the lead, getting to the quarter, two lengths in front of Vanderlynn, in $36\frac{1}{2}$ seconds. There was more difference at the half in $1:10\frac{1}{2}$, but from there Vanderlynn closed on the leader, and came home with something to spare, in $2:22$.

The second heat was disastrous to all except Vanderlynn. Albert W broke, then Bay Frank, neither of which could recover in time to save their distance, giving Vanderlynn first, second, and third money. Time, $2:21$.

OPENING ADDRESS

OF PRESIDENT FINIGAN, DELIVERED AT THE PAVILION, ON TUESDAY EVENING,
SEPTEMBER 16, 1884.

DIRECTORS AND MEMBERS OF THE STATE AGRICULTURAL SOCIETY :
I feel constrained to pause at the outset of my remarks, to contemplate this new and splendid building, in which we now hold our Thirty-first Annual Fair.

It is a pleasing duty for me to have the honor, as is customary, of inaugurating this building for the first time. For the purpose for which it has been erected, this building has a floor space of 124,000 square feet; comfortable standing room for the entire population of many of our larger towns.

In erecting this grand palace of industry, Sacramento has contributed \$40,000, and the State \$40,000, and the State Agricultural Society has erected a State building for \$80,000 that cannot be duplicated for \$100,000.

We had a large outlay in furnishing this building, and at the Park we have made improvements that are equal in every way to the best on the other side of the Rockies. It cost this society \$50,000 for permanent improvements this last year, and no honest minded citizen can say that it was not needed, nor that the money was not judiciously spent. We point to the completed work with pride. The grandest results have been achieved with great economy of time and means.

This superb building, strong in all its parts, useful in all its departments, beautiful both in detail and general effect; this grand achievement suggests the subject of my annual address. As we have builded here so must we build our system of agriculture. We must and will establish in this State a comprehensive system that will embrace every variety of soil and climate, every interest; a system that will be permeated by intelligence, and conducted with skill; a system so complete in its parts that each will add strength to all the rest; a system that will give wealth and happiness to our people; a system that will continue to be progressive in development for all time to come.

But I must address myself to the matter in hand, with directness and plainness of speech, for we are here with a purpose.

How are we to accomplish the grand results already indicated? What are the difficulties to be surmounted? In answering these questions I can do little more than offer suggestions, and I beg you to understand, at the outset, that my aim is to stimulate the thoughts of those who are more competent to treat of these great subjects than I am. If I succeed in doing this I shall be more than satisfied. You will pardon me, therefore, if my address seems fragmentary and incomplete.

Let us begin with the soil. The soil of California is naturally rich, and it possesses remarkable recuperative powers. Heretofore we have

gathered from the virgin soil great crops without the exercise of much intelligence or forethought. But already we see signs of decreasing vigor in the overtaxed soil, and that means without timely aid, the speedy decay of agriculture. Human greed may destroy, but alone, it will not lead to intelligent success. Farmers may conceal the fact of soil impoverishment, that they may sell and move to fresher lands, there to repeat their efforts at destruction, but such men cannot build up agriculture, and they are enemies of the human race.

To the patriotic man, who has brains enough to scorn present success at the cost of future ruin, and who desires prolonged prosperity for himself and others, comes the question: How can I so use the soil, that I may gain subsistence, and yet prevent its impoverishment?

Do we consider this matter? Do we understand the subject? We know, in a general way, that to preserve the vigor of soil, we must give it rest; comparative rest, by alternation of crops, and positive rest by fallowing. But do our people fully appreciate the fact that this matter of soil rest lies at the base of all permanent prosperity?

If we are to have rest by rotation of crops, what change of crops can we have that will not impoverish the owner, while impoverishment of soil is prevented?

The answer involves the further subject of markets, and to whom can we go for practical information? The General Government does something in this direction in a vague way, by showing some of the probabilities as to marketable crops, but does not help us in this matter.

The University of California has published important information relative to the preservation of soils, but the information reaches but few people. But whether we are ignorant or wise, the fact remains, that there can be no brilliant or even prosperous future to a State that does not practice soil rest systematically.

Again: It is admitted that shallow tillage leads to heavy washing and gullied fields; that deep plowing prevents this ruinous evil. It is also true that much of our soil is not productive for one or two years after deep plowing.

I do not state the reason, but the fact: and call your attention to the further fact that the subject of deep plowing has not received just attention. Ought not some competent person to be charged with the duty of giving these points exhaustive consideration? Can we reasonably expect to develop a true system of agriculture while we ignore these grave matters?

Again, how are we to recuperate the millions of acres already impoverished? We cannot do it by concealing or denying the facts. We have had quite enough of concealment, and now we must face facts. Our business is to build up, and we cannot do it by a wretched subterfuge.

The impoverished soil must have rest, and if we do not give it the soil itself will take the needed rest by refusing to yield crops. As an aid to rest comes in the practice of fertilization. But what do we know about fertilization, and where can we get manures? These questions have been considered somewhat at the State University, and that body has given valuable hints. They have told us how to use the ash of spent tan bark, and the lime refuse from sugar works, but these manures are not within the reach of many. We must settle down to the conviction that millions of acres of California land must be manured. And we must see to it that some one be found to dis-

cover the proper manures, and to tell us what manure is best adapted to the particular soils that need it. This is not an easy matter in a State that has so many varieties of soil. But the work must be done, else we cannot recuperate impoverished soil, and without recuperated soil we cannot establish a fully developed system of agriculture. The difficulty is of a serious nature, but it must and will be surmounted.

Again: We have large tracts of alkali lands, which are in main non-productive, a situation that cannot be tolerated by a civilized people, who aim to establish a progressive system of agriculture.

At the University, the College of Agriculture has done much to show us how to recover these soils, and the University papers on this subject should be in the hands of every farmer. Considerable alkali land has been recovered following University suggestions, but, unfortunately, little effort has been made to recover the larger tracts or even the small spots that occur on almost every farm. The knowledge now available on this subject, is perhaps sufficient, but who will undertake the grand work of subjugating the vast tracts of alkali lands? I answer, that thousands will engage in this work when they discover that it can be done. Unfortunately in this as in everything else, our accumulated store of knowledge is not brought home to those who need it.

Again: Aside from that which is alkaline, we have large tracts of desert, so called. And yet a few trifling experiments have been sufficiently successful to convince the thoughtful and intelligent agriculturist, that every acre of that so called desert land can be put to profitable uses. Few know anything about these experiments; the actual facts are practically inaccessible, like a million other facts that everybody needs, but the other solemn fact remains, that the State of California, to do its proper work in developing a true system of agriculture; to do its duty in planting ten millions of people within its territory; to do its duty in establishing a high state of civilization on this coast, must recover for human uses every acre of land.

Again: To accommodate the wants of immigrants and those who are seeking investment, the State should investigate and map out the natural divisions of soil, etc., so that every one may be able to know accurately the character of all the soils of the State. Such a work would save untold misery, numberless failures, discouragement of effort.

Bearing in mind our main object, namely, the establishment of a comprehensive progressive system of agriculture, we come now to the crop problems.

The State of California is phenomenal in its comprehensive peculiarities. It has every variety of soil and climate known elsewhere in the temperate zones of this Continent, with those of the semi-tropical regions.

Not to enlarge upon this point and to come bluntly to the matter that we are after, we ask: Can we positively affirm that we are raising on any given acre the crop best fitted to its powers?

Can we affirm that we are raising in this State the most profitable crops? If we are raising the crops best suited to our several soils and climates, and those most in demand, we may ascribe the fact to accident as much as to intelligence. We have neither considered the power of the soil, nor the real demand of the world's markets. What farmer can truthfully say that he cannot produce on his land crops better adapted to his soil, and more profitably than those now

raised by him? Is it not barely possible, to say the least, that the "quinoa plant," the pyrethrum; the New Zealand flax; the ramie plant; the angola panic; the New Zealand salt bush; that cotton, sumach, sorghum; the large varieties of foreign forage grasses, and a large number besides, now unknown to us, may be better adapted to our soils and climates, and more remunerative than some of our present crops? Is it not possible that there are varieties of oats, barley, wheat, etc., that would drive out all the varieties now produced, by reason of their adaptability to our soils and climates, and make remunerative returns? We do know that the seeds now in use have superseded other seeds, and the fact suggests a probability of further improvement.

But after all this must be a continuous work, it can have no end until the seeds of the world have been tried; each variety must be tested in the several soils and climates, and the conditions of success or failure must be positively ascertained. In the East anything that will succeed in a given place, will also succeed in any other place within, say, five hundred miles. Here a plant that may be successfully grown in one place may be unfitted to the soil and climate of another place fifty or even ten miles distant. Successful experiments have been made, but we know little, because we do not know the conditions as to soil, climate, culture, and treatment.

But this much you will admit, namely, that we cannot consider our agriculture developed to a high state until we produce the crops best suited to our soil, climate, and market; that fact cannot be established without elaborate and careful experiment.

Then, I say, in the name of our common humanity, let the State and nation expend its millions in true experimental work, for in so doing they will hasten the day that will find on this coast a comprehensive and ever progressing system of agriculture.

But I must particularize somewhat in the matter of crops, for the purpose of impressing upon your mind the necessity of experimental work. Much attention is now given by our people to the subject of wine production, especially the production of claret grapes, and we are spending vast sums of money in the advancement of this interest. Is it not probable that our people are planting grapes on soils that will not produce what they expect? Experience as well as the investigation of the Viticultural Department of the State University answer this question affirmatively, by facts that cannot be denied. I will not go into the details of this subject, as the Viticultural Commissioners and the State University have done a work in this direction that cannot be overrated.

This variety of soil and climate, giving to the same grape a decidedly different composition, according to the peculiarities of localities, pushes to the front the unmistakable fact as good wine can be produced in California as elsewhere, only by blending of different varieties. What grapes can be most advantageously used in blending is the question of the hour. As yet we do not know. And few know the fact that with but two or three exceptions there is no one variety of grape that will by itself produce the best wine. Aside from these exceptions the best wines of Europe are produced by blending. Their advantage over us in this respect is found in the fact that they know by long experience what varieties to use in blending. Much is expected in this line of experimentation from the work of the College of Agriculture, now in progress upon the farm of

the Hon. J. T. Doyle, in Santa Clara County. These facts are mentioned to show that the peculiarities of California more than ordinarily require special investigation, and careful consideration, and that we have the talent among us requisite for successful experiment.

The same line of thought may be taken with reference to all the fruits, etc.

Without pursuing the discussion of the crop problem further, I desire to call your attention to another matter closely related, and of grave importance.

Great losses occur because of the excess of production in certain lines. Our people are apt to run in one line, producing the same crops, thus reducing the price. And no system of agriculture can be regarded as highly advanced until this evil is remedied. The remedy can only be found in intelligent and reliable crop reports. If some competent person could be found who would give his entire time to a consideration of probable and possible production, with careful deductions therefrom, as to the best crops for a given season, he would add immensely to the prosperity of California. And we may feel quite certain that a wisely developed system of agriculture will include thorough work in this direction. The necessity of this is so obvious that an Association of Fruit Growers has already been formed for this very purpose.

Other subjects press upon us, but they can only be alluded to.

Insect pests and fungi are beginning to attack our grain, orchards, and vineyards, and Messrs. Chapin, Cooke, Behr, Harkness, and others, have done good service in studying these subjects. Indeed, I may safely say that in fighting insect pests California already leads the world. But I feel constrained to say that more elaborate work is needed. We must, to meet the wants of a progressive system, employ the best talent the world can produce. We need accurate teaching, not only about the nature and habits of pests of all kinds, but also as to the best, safest, and most economical methods of applying insecticides. Without profound practical instruction in these matters we will be at the mercy of pests. If we can call on the State to defend our fields against savage tribes of men, why not expect the State to defend us against the pestiferous armies that are even more destructive?

A true, progressive, comprehensive system of agriculture must include forestry; the introduction of hard woods; the production and preservation of timber for lumber and fuel; the growth of trees as wind breaks, and tannin-bearing trees for manufacturing purposes.

The subject of forestry must be studied originally in this State. The cutting down of primitive forests does not involve the same consequences as in eastern countries, where denudation is followed by sudden floods and prolonged drought, because our denuded mountains rapidly produce a covering that is quite as useful as the forests that they succeed. But the lumber problem is as important here as there.

In relation to the tannin-bearing trees, I find in the Bulletin of the Professor of Agriculture of the State University, an important beginning of this discussion. I find there that there are many trees now successfully grown in California that are rich in tannin. I mention the fact to show you that we are already doing something in the line of that progress that will lead eventually to a comprehensive system of production that will place California at the head of progressive States.

I will not discuss the problems that are involved in the production and preservation of the highest types of domestic animals, but pass on to a very brief consideration of another matter that lies at the very root of a well developed, comprehensive system of agriculture. I refer to irrigation.

In many localities irrigation is not an absolute necessity. Nevertheless I am convinced that there is no part of the State that would not be the better for irrigation, while it is certain that there are immense tracts of arable land where irrigation is absolutely necessary. On the whole we may safely say that the productiveness of California cannot be commanded without such a system; that it is necessary to enable us to control droughts in places where irrigation is not generally needed. Many systems will spring up, and in the future the waters of Lake Tahoe will undoubtedly be distributed through the Sacramento Valley and the Bay counties. There will be local systems of reservoirs, wells, and canals, and systems more general, of which I need not speak, but there will also be special problems demanding solution, as we may even now see in the valuable work heretofore done in this young State. Many wells, streams, and lakes will be found to contain material in solution which will be found upon precipitation to be either very injurious or beneficial to the soil at certain times, as the case may be, and must, therefore, be studied. I can only suggest the problem, and reassert the proposition that a comprehensive State system of agriculture requires systematic irrigation.

I have now outlined the numerous problems, upon the solution of which depends the future prosperity of California. Each one of them presses upon us with nearly equal force, and the people of this State must see to it that they all receive the required degree of consideration. Without a solution, our system of agriculture must continue to be fragmentary, and to a large extent accidental, both in its methods and results. With a just solution will come a degree of prosperity that will place California in the van of all the States.

I started with the proposition that it is our duty as intelligent, fore-handed people, to establish a system of agriculture adapted to the wants of a great people, and commensurate with the capabilities of our State; a system capable of progressive development for all time to come.

I then briefly enumerated the several difficulties that lie in the way of such an achievement, and which must be surmounted before we can accomplish much in the desired direction.

And I come now to the question of ways and means. What can be done to surmount the above named difficulties? In general, I answer, that in the natural course of things, a progressive people, such as ours, will surmount the difficulties named, and many more, as a matter of course—within the next thousand years.

But who among you is willing to leave the grand consummation to the influence of the general drift towards high development? Certainly not the men who, within a period of thirty-five years, have built a great State. For such men to discern a desired end is to act. No, delay is not for us; rapid execution is both our duty and to our taste. What, then, is needed to enable us to overcome our difficulties, and to establish the desired system of agriculture?

First of all we need knowledge—accurate knowledge—knowledge that can be tried without distrust. It is but little use to tell us that A B succeeded in producing something in a given place. What were

the conditions of his success? What was the nature of the soil; the climate? What were the conditions of moisture and cultivation?

In short, we need experimental work of the highest order; practical experiments by individuals and by the State. We must have experimental work in the different soils and climates. This knowledge, accurately ascertained, must be gathered up, sifted, and preserved by the highest scientific ability. It must be examined, tested, until there can be no doubt that absolute facts have been obtained.

Of such knowledge there is but little—there must be more, and from the highest authority obtainable. In most instances the experiments of individuals have been useful only to those who conducted them.

Without such knowledge about the several matters already discussed, improvements in agricultural methods must be slow and exceedingly expensive. Indeed, any kind of rational progress, without such knowledge, is practically impossible. If we are to make the progress desired, the State and nation must expend their money freely, though wisely.

I cannot let this occasion pass without calling your attention to the meager, and to my thinking, parsimonious appropriation by the Legislature of this State, for the benefit of the State Agricultural Society. In view of the acknowledged great good that this association has accomplished for the State at large, in stimulating and fostering every vital interest and resource within our boundaries; in quickening and encouraging the inventive genius of our citizens and mechanics; in directing the minds of our agriculturists, breeders, artisans, and miners to better and improved methods; in the recognition and substantial reward of progress and improvement in every direction, I must be allowed to say that the pittance of some \$7,500 per year, oftentimes grudgingly allowed by our legislators, is totally and ridiculously inadequate for the bare necessities of the case.

The Legislature of a State is legally, as well as in popular estimation, supposed to be the true voice of the people, but I may be allowed to say, without intending any personal offense, that in this particular matter our Legislature is not the proper mouthpiece of the people, and misrepresents the real sentiments of the people of California. If you will forgive the seeming egotism, I have mingled with the people representing every section, locality, and interest in the State, and I know from personal knowledge whereof I speak. The strange timidity of our legislators in dealing liberally with the State and district associations is in nowise justified by a large majority of the people who send them to the Capital of the State as their representatives. I venture the assertion boldly that the Legislature might quadruple the present appropriation, and more nearly represent their constituents than they do now, from the simple fact that all classes have a positive and correct conviction, that a larger return is made to the State for the money expended in this, than in any other direction, and consequently it is a tax that they willingly and cheerfully bear.

The President and Board of Directors feel that they have a right to ask for larger annual appropriations for the benefit of the State Agricultural Societies, not only on the ground that the highest good of the State demands it, but also upon the personal ground that they are the largest individual contributors to this public fund for the advancement of public and State interests.

I do not say it for myself, but for my brother Directors, that they do more work and at greater personal sacrifice for the public good than any other body of men of which I have any personal knowledge. I suggest that it is no mean tax that a member pays when he cheerfully travels from Los Angeles County or some other equally remote, at his own expense, and to the neglect of important private enterprises, to attend the frequent meetings of our State Board, and yet this is the mere recital of a fact. Have the members of this Board then a right to demand that the State shall be equally as liberal? Please bear in mind that we are no beggars, asking alms for "sweet charity's sake," but as administrators of a public trust confided to us, asking for the means to discharge our duties according to the expectations and requirements of the people. Grain shippers and all others seeking true information in regard to the true amount of the different crops of each year, will do well to put themselves in communication with the Secretary of this Board before coming to a conclusion as to the actual amount raised each year. The Bull and Bear element that often work great hardship to many a well regulated house have no standing with this society. The Bulls we keep on exhibition at the park, and the Bears keep a respectful distance in the mountains. Therefore, I say, without fear of contradiction, this society is the place to get true information of all the crop products of the State. Pardon me if I have drifted away from experimental farming, or as the Rev. Henry Ward Beecher terms experimental farmers, the fools that make wise men rich. With your kind indulgence, I will only make a few more suggestions. The State Agricultural Society, the Viticultural Commissioners, and the Boards of Silk Culture and Horticulture have also done good work in this direction.

It is still better to publish frequent bulletins containing a report upon and a discussion of single points. It will also be well to prepare and publish simple and plain agricultural primers containing the results of experimentation, thus carrying the work into families and schools. It will be desirable to educate our school teachers with a view to similar instruction. But we must go further and carry this work home to neighborhoods and individuals by personal instruction and correspondence. Every farmer must be induced to submit his questions directly to the source of scientific knowledge.

In addition there will remain a vast amount of valuable work to be done by the State Agricultural Society; a bureau of agricultural and labor statistics; the district societies; the several State commissions; the State Grange, and the press. I shall not dwell upon the work to be done by these agencies, because it is more obvious than that already considered somewhat in detail. But we must increase our efforts to unite all these agencies in active hearty coöperation. Hitherto our efforts have been too widely scattered, and we suffer from consequent delays and obscure methods.

With this distribution of labor, and coöperative spirit, we can make stupendous progress in a very short time. A few years will see the progressive development of a comprehensive system of agriculture that will enrich our people, and add millions to our population, accompanying in a very short time what in Europe has required centuries to achieve.

Can we do it? Is success within the range of possibilities? For myself, I can boldly say, that I look forward with absolute confidence towards grand success. I know that the capabilities of our State give

promise of all that can be desired. And when I study the character of our people, I feel still more confident.

Here in Sacramento we stand on ground consecrated by a degree of courage, intelligence, and skill that inspires exhilarating hope. The ground upon which this beautiful city is built, was wrested from swamps; once it was destroyed by fire, once by flood. Its people have stood sentinel over threatening fires and floods for years. They have lifted the very earth upon which the city stands; they have withstood sudden depressions caused by heavy removals of population; they have successfully contended against terrible fluctuations in values. And yet they have built a city that is the pride of California, with an assured future that gives absolute promise of universal comfort, wealth, and happiness. Is there anything that such a people cannot do?

Look over the entire State and behold the grand work already done. Thirty-five years ago an army of boys came here with nothing but spades, picks, and blankets. They were without money or State aid. They withstood heat and cold, drought, flood, famine, disease, and conquered in every fight. Behold, how they have made the desert to blossom as the rose. They have established towns, villages, cities, and a State. Order prevails, and prosperity blesses nearly a million of people. Can such a people fail in any enterprise that they may see to be necessary?

Behold then, boundless courage, quick intelligence, persistent energy, and pliant elasticity, side by side with opportunity, and know that only success can come.

In the department of fine arts our course has always been progressive. Year after year we have placed on exhibition a representative collection of works produced in the State of California. This year we open to you a new gallery, designed with the utmost skill of the architect, so that with an ample room and an unimpeded light you may be able to discover more easily all the beauties of light and shade and color contained in the pictures on the walls. In all fairs throughout the State there is no part more frequented by visitors than the art department. High and low, rich and poor, the educated and the uncultivated, seem to derive an equal satisfaction from viewing, criticising, and admiring the works of art offered for inspection.

This should be to us a source of great encouragement. First, because it is a sure indication of the natural refinement and taste of the community in which we live. Secondly, it is indicative of a state of prosperity in material affairs. The motto of all industrial communities is, "Business first, and pleasure afterwards;" and the fact that so many working men and business men can find time to examine and discuss works of art, argues a certain measure of success.

California has, in the comparatively short period of her existence, done a great deal for art, and I may say that she holds a high rank among her sister States for the number and ability of her artists, and for the generous patronage she has bestowed not only upon resident artists, but also on those of the Eastern States and foreign countries; but she has still a great work to accomplish in the future, if she is to take that place among the enlightened communities of the country to which she will be fairly entitled, by reason of her climate, her natural local advantages, her wealth, and general intelligence.

We have no lack of art teachers of greater or less capacity; but of

school, proper, but one—the California School of Design, supported by the San Francisco Art Association. This school has been established for twelve years. I have watched its progress, and made myself familiar with its management since its commencement. It has undoubtedly done a good work. Pupils have attended it from all parts of the Pacific Coast, from San Diego to Victoria. The average attendance is between seventy and eighty, though the roll sometimes mounts to upward of one hundred. About a dozen of the graduates are now studying in Europe, a number are following the profession in this State, and many are teaching the elements of art in schools and seminaries.

Without doubt the School of Design has done much to create and elevate taste in this community. Hitherto the only branches taught have been crayon drawing and oil painting; want of means has prevented expansion. Means from some source should be supplied to enable the Directors to supplement the present classes with others in modeling, water colors, wood carving, etc.

A gentleman who has recently visited the Eastern cities after an interval of four years, an enthusiastic lover of art, and withal an energetic practical business man, tells me that the evidences of improvement in taste, mechanical and artistic, is everywhere so observable as to be almost phenomenal, and sees it in the color and designs of buildings, in the external architectural ornaments, even in the signs; in fact, all things, external and internal.

This is real progress, and what we want to see is such palpable evidence of improvement in California. We want to carry the refining influence of art into the household of every farmer and mechanic in the State. Judicious selection of color in the painting and papering of our houses, appropriateness of ornament, elegance of form and fitness of purpose in our domestic utensils, are indications of this grateful influence. It will come gradually, but I am sure it will come in time. Let us do what we can to hasten it.

Directors, members, and fellow-citizens, to-day we leave the past behind us, and in this new palace of industry we inaugurate a new era. Older countries may have had their golden age in the past; ours is in the future.

ANNUAL ADDRESS

DELIVERED BEFORE THE STATE AGRICULTURAL SOCIETY, AT SACRAMENTO,
SEPTEMBER 16, 1884, BY HON. L. J. ROSE, OF SUNNY SLOPES, SAN GABRIEL.

GRAPE CULTURE IN CALIFORNIA.

LADIES AND GENTLEMEN: It is with much pleasure that I attend the annual return of this Fair, and year by year, note the improvements of the beautiful productions of our State—the profusion and beauty of the flower garden, the orchard, the vineyard, and the field, as displayed here.

Well may visitors to our coast look with wonder and admiration at our ever fresh display, running through every month in the year; at the varied hues and forms of flora, the wondrous size, fairness, richness of coloring, and luscious flavor, the gifts of Pomona, or the abundance and quality, the gifts of Ceres. California seems to be the favored abode of these deities, and where they delight to pour out their choicest gifts; where they add a new perfume to the violet and the rose; a brighter blush and softer down to the rounded cheek of the peach; more bloom and sunshine to the purple or the gold of the grape, and a lavish abundance which is at the same time the envy and admiration of the world.

Nor are we blessed with all these gifts in the vegetable kingdom only, for the animal kingdom fully keeps pace with all of this marvelous perfection.

Go to the Fair grounds—look through the stock department; see the sheep, the pigs, the cattle of various breeds as displayed there, and you will see a glow of health, and lines of beauty for each kind and breed, true to their standard, to delight the expert, the connoisseur, and the artist. Take the horse department—look at the gloss and sheen of their satin coats, see the soft undulating lines of their contour and muscle, denoting strength, speed, and perfect health—and the world cannot excel the exhibition. Nor are we left in the realm of opinion or belief in this matter; beliefs may be deceptive, for we all love our own the best; but we have proof. With not one hundredth part of the number, yet we are competing successfully in both trotting and running, against the combined stables of the East, and it is a reasonable belief that man, too, will attain a higher average organization; that time will produce individuals that will be the peers of other countries and lands; that individuals, from time to time, will crop out as our country grows older, that will be renowned in poetry, in oratory, in art, and in science.

I look around me here and see young, fresh, and beautiful forms and faces beaming with life and perfect health, reared or matured in this land, free from all enervating influences—a land, you may say,

free from all malaria or sickness of any kind—where man can enjoy every day in the year in outdoor occupation—with almost perpetual sunshine, with cool and refreshing nights, and with nature's gifts of beauty on every hand; a country bounded by the Pacific Ocean, with its cooling breeze by day, and on the other side by a range of snow-capped mountains and their refreshing breeze at night; with pure air, pure mountain water, and conditions of climate, where to exercise is a pleasure. Is it strange, in view of all this perfection, that man, surrounded by these favored conditions, should be the superior in either physical and mental development to his favored brother in other lands?

I envy the youth of California their future. They will enjoy and make the changes which I see will come, and come rapidly. This beautiful California, with its varied climate, with its tropical and its temperate zone, with their wide range of productions being of equal excellence, and the extremes are sometimes scarcely more than an hour's ride apart. Take this place—Sacramento—with its tropical atmosphere, with its tropical growth of flowers and trees which always fill me with admiration—note that peculiar, still, warm twilight, where the sunshine, after the sun has set, still lingers in the air. What a contrast to San Francisco, or any of the coast counties, where an overcoat is a necessary adjunct to one's wardrobe at all seasons of the year, and instead of the lazy quiet languor of your feeling, all is activity and rush, with nerves astrung for action and work, and the mind fired with energy and ambition. Yet each excels in some productions. The one is the home of the peach, the melon, the corn, and such crops as require heat; the other excels in the production of cherries, currants, potatoes, cabbage, and like products not requiring such an ardent sun.

Coming events, it is said, cast their shadows before. Already we can see here and there what almost every part of California will be. We have only to look at Riverside, Pasadena, Anaheim, San Gabriel, Alhambra, Fresno, and other bright spots, teaching us the possibilities of our country. It is but a few years since these beautiful tracts were the grazing grounds of cattle, covered with cactus and chaparral, with nothing to point them out as being better than the surrounding country; now they are like oases in the landscape, veritable Edens, containing a happy population who produce beautiful fruits and make wines to gladden the hearts of less favored countries.

To sing pæans to our country, which we all love, is a very pleasant task. But I have been asked to address you, for the reason that I may have some information on practical subjects, which may have some value to some of you.

For many years I have been engaged in the growing of the grape, and in the manufacture of wine. Some facts that I have learned and opinions I have formed out of this long experience, may be of value and benefit to beginners. The question of where to plant, will always be of great importance; and each man's experience becomes important, for experience is the only sure guide. There are now vineyards in every part of the State—enough at least to show that every portion can raise grapes fair to look upon and in abundance, and, to some extent, their product can be seen and compared. We have vineyards on the mountain slopes and in the valleys, and each locality claims some superiority. There is a general belief, however, that hillsides

are preferable. This, however, I think is only true as to some localities, not to all.

A hillside differs from a plane or level surface necessarily but in two ways; first, exposure when on the south and west side to the more direct rays of the sun; and second, to a more rapid shedding of water that falls as rain and the greater evaporation, having more surface exposed. It is true that the grape has an abhorrence of excessive moisture, causing many diseases and decay, and abundant sunshine is a necessity for their full maturity and excellence. Yet there is a happy mean, too, in this, and we may have too little of the first and too much of the last.

In Germany and France, and in the coast counties of this State, we have, as a rule, an excessive rainfall and a lack of warmth; and in these localities a southern slope may be a necessity to produce a grape of such quality as to make a superior wine. In the interior of our State, these conditions, however, are changed. We have an average rainfall of twelve inches or less (a scant sufficiency) and an ardent sun, at times scorching the foliage and burning the fruit. There, to go on a hillside would be only aggravating the trouble of a lack of moisture and an excess of heat, and a level surface would be a necessity, or if a hillside, then a northern exposure would be desirable.

Grapes will grow in California in all soils that will grow ordinary vegetation, and it is impossible to give exact information. What may be true in one locality, or for one variety of grapes in that locality, may not hold true in another. Grapes will grow, and produce large crops, in adobe soils, and I am not prepared to say that such grapes are not good. Stiff clay will also grow grapes. The berries will be small and the crop light, yet such grapes are very rich in color, and may make good wine. But I do not wish to plant grapes in either of these soils, if for no other reason than that it would require more than twice the labor to get them and keep them in order. The soil I prefer is sand and gravel, mixed with loam and clay, which easily pulverizes when plowed, for such soil will yield large crops of the best quality of grapes, and can be kept in good culture with a minimum of labor, and will retain moisture if properly cultivated. Of course, I would want this soil to be deep, with no underlying hardpan nor water near the surface, and would always use that which contained the most clay for dark grapes; for, as a rule, the more clay (which means iron) there is, the more color will the grapes contain.

The crowbar is used by me because it is cheaper, and if care is exercised it is as good as the spade. The great secret of success lies in the act of filling the hole, especially from the bottom. If a space is left at the bottom not filled with earth, then the cutting at that point will mildew. Dry rot will follow, and it is almost a certainty that all of it will die. Nor is it difficult to fill the hole with the crowbar. It only requires a little careful practice in a soil that easily pulverizes, so that the earth will clasp the cutting in every part underground. In adobe, or stiff clay, it becomes a very different process. I have, however, learned a way by which it may be done very easily and effectually. Make your hole as usual with the crowbar and insert the cutting. Then take sand dry enough to run easily, and fill your hole with it. This can be done quickly, and almost every cutting will grow.

When rooted vines are to be planted, trim the roots short enough so that the plants so trimmed will, with ease, go in the hole made by the crowbar. Long roots are no advantage, for where they have been

once formed, the callous and the short root surface will throw out new roots with the greatest ease.

Cultivating is one of the necessities for the growing of abundant crops, and if properly performed, all the moisture in a soil will be retained for the use of the crop to be grown. Cultivation acts beneficially, too, in other directions, for by loosening the soil it allows the air and warmth to penetrate more readily to the roots.

Rain as it falls is taken up by the soil, and is gradually carried down by the power of gravitation. This continual movement of the water is more or less active, in proportion to the quantity held by a soil, for there is a saturating point, varying in different soils, when the water moves with reluctance.

There is, however, another power, the very opposite to gravitation, the tendency to go down, namely: capillary attraction—the power for liquids to raise themselves in hair-like spaces or tubes. You can see this power by taking a cube of sugar and dipping the tip of it in your coffee, when the liquid will rapidly rise to every part of the sugar, until filled to its saturating point, when there will be no farther movement. Again the same thing occurs when you take the wick of a lamp, and as soon as one end touches the oil, the oil at once rises in the wick, filling all the tubes or spaces, and to that extent diminishing the oil in the lamp; but when saturated to the capacity of the wick, all movement ceases. Light, however, the end of the wick, when oil will be consumed to feed the flame, and a movement of the oil in the wick will begin, which will continue as long as the light burns, until all the oil in the lamp is exhausted.

This is the way water is removed from the soil. The sun is the lamp, a hard surface soil with unbroken tubes and spaces, or growing plants, are the wicks, and the soil, to a number of feet in depth, is the reservoir. As long as these wicks (the crust of the soil and plants) remain, evaporation will continue until the soil is exhausted of its water to several feet in depth. Thus water being removed from the soil near the surface, the soil below yields up part of its moisture to make both equal.

This being a fact, it becomes a study how to stop this evaporation; and we find we can do very much in that direction, for there are certain conditions which almost cut off evaporation entirely, as you can easily test for yourself. We find that capillary attraction goes on very easily through hard but porous substances like brick, loaf sugar, hard or compact earth, etc., but with difficulty in loose substances, where spaces are wide apart or broken up. For instance: take a dry brick, place it on a wet sponge, and it will draw the moisture out of the sponge; and if placed in the sun will evaporate the water in both in a short time. Reverse the order, put a dry sponge on a wet brick and no water will be taken up by the sponge, and if placed in the sun, the sponge will protect the water in the brick from being evaporated. Thus it is, that by plowing we break up the hard crust (a favorable condition for capillary attraction), with its tubes and small continuous spaces, changing it to a loose earth (without continuous spaces for the water to climb in), which acts like the sponge and forms a mulch to protect the moisture from the sun and stop evaporation, for there is no water to evaporate—the wick is cut off. That lands cultivated, but not planted to any crops, retain their moisture all Summer, many of you have observed. The conditions, however, are quickly

changed when such ground is growing weeds, or is planted in some crop. The reason for this is very simple—moisture and sunshine, or warmth, are a necessity for the growth of all plants.

It would be an interesting study to look into the processes of plant life, observe how they grow, and the different roles that water plays in the growth of plants; but a paper of this kind will not permit of this, and for our purpose it is sufficient to state that water is taken from the soil by the roots of plants, and is carried to every part of the plant where it is exposed to the sun, and most actively evaporated by the leaves; and this movement continues as in the lamp until the soil is exhausted of its water, when growth ceases.

This teaches us that we should keep our grounds clean from weeds, for to allow them to grow robs the soil of the water necessary for their crop. As I said before, all growth is at the expense of water from the soil grown in, and the adage holds here as in everything else: "You can't eat your cake and still have it." It follows, therefore, that the larger the plants, trees, or vines are, the more leaves there will be, and consequently more evaporating surface for the sun to act on, and the more water will be required and evaporated. You will readily see that if you raise weeds you will only have additional wicks to draw from your soil, and rob the crop which you wish to raise. Therefore, plowing and cultivating the soil accomplishes both purposes, by keeping your soil loose and in a favorable condition to prevent capillary action on the surface where the sun can get at it, and by destroying the not wanted vegetation with their connecting wicks of stems and roots in the soil to pump it up.

Cultivation should be as often as a hard surface or crust forms. This may be sooner or later, for different kinds of soils differ in this respect. Rain and irrigation will form it as soon as the surface dries, and for this reason light cultivation should follow every rain or irrigation, when possible, as soon as the soil will work kindly; and it will be found that such rain or irrigation, when followed by stirring the top soil, will do twice the good, and the ground will remain moist twice as long than when it is neglected. Even when there has been no rain or irrigation and the top soil is so dry that weeds do not sprout any more, yet if there is a crust on the ground it should be broken up to form a thin coat of loose soil, and your vines or crops will show the benefit in no doubtful manner by renewed growth and vigor.

What to plant becomes a very serious question, and I regret that there is so little information which are known to be facts. Most vineyardists and wine makers are agreed about a few varieties not to plant—as the Mission, Black Malvoisie, and the Muscat of Alexandria, for wine. I would say that for the present we have enough Zinfandel. The reason for my saying so is because we are finding among the new varieties that are now being introduced, grapes that make a much better red wine. And to find a grape that is uniformly productive, that will make a good red wine, of dark color and good keeping qualities—a wine which will be called good by the Englishman and the Frenchman—will solve the viticultural problem in California; for then we can all raise grapes and be happy, for we will not be able to overdo the planting of vines. The Zinfandel wine of some of the best localities is fair, but the bulk of that wine made in this State has too much acidity.

Much of it may be used with other wines for "blending;" but that

word blending always has a suspicious sound to me, and nine times out of ten it means that the wine to be blended has a grave fault or defect, generally excessive acidity; and much good wine is spoiled by trying to make a bad wine passable. I do not wish to say that blending may not be done, to the benefit of two or more kinds, for one wine may have too little color, or not enough astringency; while another may have an excess of either, or both, unfitting it to be drank as it is; or one wine may be almost neutral in flavor and bouquet, while another may have too much. Such blends are of utility in the hands of a man who understands his calling. It is quite likely that one locality may not be able to produce a wine of such quality as will fill all the requirements of a good wine. The cold, wet coast counties may make wine of too low spirit, lacking in color or body, when the interior counties, where there is a longer and hotter season, may be able only to raise heavy-bodied wines, strong in spirit and dark in color. If these should be actual conditions, then both sections would be benefited by an interchange. This is a fact in France, and doubtless will be so here.

California has made great progress in experimenting with many varieties—especially French varieties—of grapes in the last four years. In fact, more has been done in that direction in that time than in all time before, and we have already results in this experimental stage to show that we shall succeed and find the grape that we need. It is not certain that the same grape will be the desired grape for all sections of California; in fact it is almost certain that every marked difference in climate will have a different variety which may be especially suited to such climate; but there is a great variety of grapes coming from different countries with different climates, as different as the climate of our State and similar to ours. As yet experience is too limited to recommend with confidence any varieties for special localities. I wish I knew what to recommend to each locality, for I would like to be good even to myself. I can, however, tell you some general characteristics of some of the noted new kinds, as I have had probably better opportunities of seeing than many of you, and have heard the opinions of some of our most prominent growers and wine makers. The variety which stands, perhaps, the highest of all the new ones, is the—

Mataro.—It is claimed by those who have worked it up that it is a true claret grape, making a wine of dark color, somewhat rough to the taste when new, but improving with age—a wine that carries well and is almost impossible to spoil. I have seen it growing and bearing both in Los Angeles and Napa, and it is a good grower and heavy bearer.

Grosser Blauer is another of the grapes of very bright promise. It is very rich in tannin, making a dark, bright red wine of fine quality. The vine is healthy and a good bearer.

Carignan makes a smooth, pleasant red wine from the beginning, but it is claimed does not improve much by age. A heavy bearer, but is liable to mildew.

Trousseau makes a fair to dark colored wine of the highest quality for flavor and bouquet, and makes in the southern counties the best port wine yet made. It makes, too, a superior red dry wine, if the grapes are gathered when not over-ripe. It is free from mildew; a good grower; perhaps medium bearer. I consider it valuable, and have had some experience with it.

Cabanet, the *Shiraz*, and *Malbec* are grapes which make in Europe the finest of all wines, but where I have seen them growing (Napa Valley in 1883) they are very shy bearers; and for that reason of doubtful value, and would recommend them for experiment only.

Pri de Pedrix and *Gamay Teinturier* are two varieties of grapes whose juice, even before fermentation, is dark red, and when fermented make a wine of intense color—so dark that mixing one gallon of this wine with two of white wine would make a dark red wine, and I have much faith that red wines could thus be made of superior quality. Both of these grapes are heavy bearers, and I am very sure that such dark wines will always be in demand for mixing with wines that are deficient in color, and I intend to plant largely of both.

Petit Pinot or *Black Burgundy* is also a grape of much promise as a red wine grape, and a good bearer.

Ploussard has a good reputation about San José, the only place where it has yet been tried.

There are some varieties of American origin which I think may be very valuable for the warm localities in this State. I have no actual experience with them, and some of the wine men do not share in some of the beliefs I entertain. I speak of three varieties—

Lenoir, *Cynthiana*, and *Norton's Virginia*. We all agree that they are phylloxera proof; that the *Lenoir* makes a wine of intense dark color and valuable for mixing purposes; but when I claim that the *Cynthiana* and the *Norton* make a very superior wine, then we differ. I have drank the wine at different times, and I like it better than any other red wine. It is held, too, in high esteem East, selling for the highest price, fifteen dollars per case. This high price, no doubt, is partly owing to the limited supply. It is agreed that the wine has a most beautiful color and that it might be valuable for blending with others, and it is said that they all are good bearers. Another very valuable quality these grapes have for warm localities is that the vines retain their leaves under all trying and hot conditions of climate, and that no sunshine can scorch them, and that their large, dark green surface remains intact until Winter, fully protecting the grapes. Their drawback is that all root from cuttings with difficulty, and have to be rooted in nursery before planting in vineyard. I feel very safe, however, in recommending their extensive planting, for should my belief in their good qualities for wine purposes be erroneous, then they could be used for grafting upon, and, being phylloxera proof, would be very valuable.

As regards grapes for the making of white wine, I can speak with much more confidence, for our white wines, especially in the south, are much more satisfactory than our red wines, excepting our sweet wines, whether white or red, which are always satisfactory.

For warm localities, I can with confidence recommend the *Burger*. I have had it now for over ten years. It is the heaviest of all bearers, and makes a wine of good quality, which can be drank without tiring the palate day after day in generous quantity, and with pleasant effect to mind and body. It is a wine which will always be popular on account of its neutral flavor and aroma, and mild, pleasant acid. It also makes a superior brandy.

Blaue Elben makes a good white wine, is a good bearer, and usually healthy, but is not quite so desirable as *Burger* and some others.

Semillon and *Sauvignon Vert* are two very valuable grapes for mak-

ing superior and excellent Sauterne, which will always bring the highest price in market. Both are very heavy bearers.

Sultana may be regarded as a grape which promises well, for it has as yet been used only for wine making to a limited extent. What I have seen was of a very good Sauterne type. It is, perhaps, the largest bearer of all the grapes.

There are, of course, many more varieties, some of which are known to be valuable, and some are in a stage of experiment; but I have given enough varieties, and those which are likely to be of great value. To give more would be only confusing, and many of them had better be left for a time in the hands of those who follow experimenting, and thus be approved or condemned as time will teach.

There are many more points that suggest themselves which would be of interest for me to discuss. One thought suggests another, and it becomes difficult to stop; but I would tire you with these prosy details, and I will bring my remarks to a close. I cannot do so without a word of praise to the liberal people of Sacramento, in doing the lion's share in giving the people of this State this grand and beautiful Agricultural Hall. Our legislators are entitled, too, to the thanks of the agricultural community for the wisdom and liberality which they have ever shown in extending aid to our State Fair and the different District Fairs; for the appropriation to help build this building; and last, but not least, for the generous aid to the viticultural interest of this State, and for the maintenance of the Board of Viticulture. And this is as it should be. A land that is so favored by Nature should also have sons to aid it in the rapid march of development. I may say with confidence, that from every dollar so expended a hundredfold benefit has been derived.

The Board of Commissioners have all been educators, and also been educated, and viticultural people have learned more in the last three years about planting and caring for vines, about wine making, fermentation, curing raisins, grafting, remedies for vine pests, and other subjects pertaining to viticulture, than all their knowledge of previous years. I believe that Californians are the best posted people and are freer from prejudice on these subjects, than any other people on the globe.

All the Commissioners have done something to this end, and they have done it because they wish to help on the good work of making California in fact, as well as by nature, the favored vine land of the world—not for price, but for love of country and mankind. Very much, however, has been due to its chief officer, Charles A. Wetmore, for he has devoted his entire time and mind to the study and teaching about every branch of this subject. It is a hobby with him, and fortunately for us, his very nature impels him to be always ready in reading and observing. He seems to acquire knowledge intuitively and gather facts on the fly.

Mr. Arpad Haraszthy, the President, also has done much by his writing and speaking, and combines with his practical experience deep study and thinking. He is a hard worker and good educator.

Mr. Matthew Cooke has helped very materially in pushing the good work along, with experiments and in devising remedies for the various diseases of plants and insect pests.

But I wish to call particular attention to the work done by Professor Hilgard and his assistants, Messrs. Rising and Morse. They are doing work of incalculable benefit to the wine interest of the

State, in their analyses of soils of wines from different parts of the State, in his experimental wine making from grapes of the same varieties grown in various portions and climates of the State, teaching how the same grape differs in different sections and under different climatic conditions, and how to obtain the best results in different localities. Such experiments make facts for the guidance of wine makers and grape growers throughout the land, saving incalculable sums to all, and aiding and benefiting the grape interest of the State to an extent that may be counted by millions.

I do not speak of this matter to eulogize these gentlemen, although they richly deserve it, but to draw attention to the work they are doing with limited means, and to urge that when the next Legislature convenes, larger appropriations should be made to enlarge these fields of useful information, which are of such great benefit to our State. It will be like bread cast upon the waters, returning to this State in a thousandfold.

I have no doubt that this is a matter which requires only to be brought to the notice of the next Legislature, for former bodies have shown an appreciation in aiding all industries which tend to the public good. They have ever shown by their acts that they recognize that the farming, the producing interest, underlies all other prosperity; that when this flourishes all trade and labor is happy. We all feel and know that California is the specially favored land of the world, and that every man or woman who lives on its productive soil is ambitious to add to its beauty and prosperity. We all see the day in the future when every part will blossom as the rose; when almost its entire length and breadth will be densely settled by a prosperous, refined, intelligent people; when our long line of seacoast will be dotted by cottages, where the ceaseless waves dash themselves in thundering tones against the cliff-bound coast, mingling with the weird and shrill sound of the sea-bird's cry; or again, lapping their curly heads over the golden sands of some delightful beach. Or these habitations will creep up the sides of our snow-capped mountains, where the air is made invigorating by the cool breeze from the snow-capped peaks, and made fragrant by the odor of the pines; where the eagle soars in lazy circles around some eyrie, occupied by his mate; where mountain streams, with their cool and dancing waters, flash and sparkle their ripples and spray with ever changing beauty in sunshine and shade. Such homes will be surrounded by vineyards, through whose dark foliage will peep the purple clusters of the grape; or by trees laden with fruit of various beautiful forms and shades of color, and there, man, when his light day's labor is o'er, will lingeringly approach his home as he listens to the last song of birds to closing day, and be wooed by the fragrance of the rose and jasmine to his evening meal.

COLLEGE OF AGRICULTURE, UNIVERSITY OF CALIFORNIA.

The following papers show some of the results of investigations and experiments conducted by the Agricultural Department of the University of California:

EXAMINATION OF SOILS FROM THE NORTHERN COAST RANGE REGION.

Valley soil, from the higher ground in the Napa Valley, two miles south of St. Helena. A dark gray loam soil, largely intermixed with rock fragments (mostly soft yellow sandstone, partly angular bits of shale, both rocks occurring on the adjacent hills), and some rounded gravel, amounting to 21.7 per cent of the soil. There is a change of color to a lighter hue at twelve inches, and at from two to two and a half feet there underlies a somewhat close and more clayey material, with fewer rock fragments. In this respect the land differs from that lying further south, near Oakville, where the depth of the looser material is greater, and oftentimes gravel underlies it at from four to five feet. Otherwise the soil is probably substantially the same in its chemical nature.

Soil from Vaca Valley, understood to be from the bench land, sent by Mr. D. Rutherford, of St. Helena, with this question: "This soil grows apricots and cherries to perfection in Vaca Valley. What does the soil of this region (presumably such as No. 672 above) need to make it like this?"

While it is not always to be expected that chemical analysis can answer such a question, the soil sent was subjected to analysis, as no sample from Vaca Valley had thus far been received. The soil is a grayish dun, rather sandy loam, dry lumps crushing easily with the finger. Nevertheless, when wetted it shows considerable clay in becoming quite plastic when worked. Of course it is very easily tillable, and known to be several feet in depth without material change. Only 1.7 per cent of sand remained on the sieve with 1-56 inch meshes. The analysis of the fine earth is given in the table, alongside of that of the Napa Valley soil, for comparison:

	Napa Valley Soil. No. 672.	Vaca Valley Soil. No. 699.
	Per cent.	Per cent.
Insoluble matter.....	77.02 }	68.76 }
Soluble silica	3.34 } 80.36	12.15 } 80.91

Available inorganic46	.25
Hygroscopic moisture	4.50	6.07
Absorbed at.....	11° C.	13.5° C.

The table shows that these two soils happen to be very much alike in all essentials of chemical composition save one, viz., phosphoric acid, which is over three times as abundant in the Napa Valley soil as in that of Vacaville, being quite deficient in the latter. Assuredly, however, the presence of that essential article of plant food would not interfere with the success of cherries. The difference doubtless depends in the main upon two points, of which the analyses can say nothing: First, the climate, which cannot be transported or changed; second, and probably most essentially, the fact that (as has been shown on Mr. Wheeler's very land) the laying of underdrains is very beneficial even to vines in that portion of the Napa Valley, and therefore, of course, much more needful for cherries. The latter, as well as apricots, seem to do well, however, in the deeper and naturally well drained soils near Oakville. It is therefore probable that underdrainage, to relieve the subsoil from all stagnant water, taking even the wettest seasons, would be the measure best calculated to make cherries succeed in the St. Helena soil. Both soils alike are rich in potash and lime, with abundance of humus in the Napa soil and a good supply in that of Vacaville. Both also are of good physical constitution, and of easy tillage. But the Vacaville soil will, before long, need the aid of phosphate fertilizers.

No. 779.—*Gray valley soil*, from near Winters, Yolo County; sent by Mr. J. C. Wyer, of Winters. The soil as received forms rather hard lumps, and should be designated as a clay loam or light adobe, the lumps being barely capable of being crushed between the fingers. On wetting, it softens rather slowly, but completely, and is then evidently readily tillable. Mr. Wyer remarks that it is necessary to harrow this soil very soon after plowing, otherwise it will remain rough for the season. From other samples sent by Mr. Wyer, it appears that in some places the surface soil is considerably heavier—true gray adobe—but is then underlaid, at about sixteen inches depth, by a material lighter in color as well as in texture, which then continues to the depth of three feet, as far as seen. On some of

this soil the earliest peaches are produced. At the spot where the sample analyzed was taken, the soil seems to continue the same for three feet, also; but the sample was taken to the depth of twenty inches only. "It seems to contain no coarse materials whatsoever. The samples sent I think are a fair average of thousands of acres in this section, but the land seems to change as you go west and north. The lands west, near the foothills, produce the early vegetables sent to San Francisco, and is lighter, having a reddish gravelly soil. At the same time it is good grain land; the land north is adobe, but is strong wheat land." The analysis resulted as follows:

Insoluble matter	56.78	} 74.37
Soluble silica	17.59	
Potash88
Soda17
Lime86
Magnesia		3.05
Br. oxide of manganese07
Peroxide of iron		4.46
Alumina		10.81
Phosphoric acid09
Sulphuric acid02
Water and organic matter		5.21
Total		99.99
Humus85
Available inorganic43
Hygroscopic moisture		7.31
Absorbed at	12° C.	

This is altogether a "strong" soil, with a high percentage of potash, a good one of lime, a fair one of phosphoric acid and of humus; in fact, considering that the sample was taken to the depth of twenty inches, and that humus rarely reaches beyond twelve, the percentage if given for the soil proper would be one half higher. If kept deeply and thoroughly tilled, it would be a very durable soil, well adapted to most fruits except cherries. Where it is heavier than the sample, the use of lime would doubtless be an advantage in facilitating tillage.

CONCERNING SPECIMENS SENT FOR EXAMINATION.

Many samples of various kinds, forwarded to the Agricultural Department for examination, come unaccompanied by any mark or label by which they can at once be identified with those alluded to in letters sent by mail. Sometimes such packages remain untouched for months for want of such identification, and at all times a great deal of unnecessary trouble results from the omission to place full labels with soil bags, etc.

It is especially requested that every sample sent, of whatever kind, should be fully marked, at least with the name of the locality and sender, besides such numbers or letters as may be placed upon it for reference; and that the express tag should, in every case, bear the name and address of the consignor, in the blank provided for the purpose.

EXAMINATIONS OF VARIOUS UPLAND SOILS.

No. 788.—*Red subsoil from the foothills near Ione, Amador County*; sent in by Thomas S. Crafts, of Ione, with request for an opinion as to fitness for fruit culture. The samples sent were the soils and subsoils

of two kinds of land—the red soil of the higher lands, and the light, chocolate-tinted loam of the valleys. Only the subsoil of the first has thus far been analyzed, and suffices to show the general character of the lands. The surface soil of the red land to the depth of twelve to thirteen inches, is relatively light, so that dry lumps can be readily crushed between the fingers—an easily tilled loam. The subsoil, thirteen to twenty-five inches, is a good deal heavier; the lump not to be crushed between the fingers, and quite adhesive when wetted. This subsoil varies in thickness; from a depth ranging from about thirty-three to fifty-five inches the red soil changes to a yellowish tint; then immediately upon the bedrock, which lies at variable depths, the color is bluish. The bedrock is slate traversed by ledges of “round, very heavy rock.” Ninety-five per cent of the subsoil passes the sieve of 1-50 inch meshes, and the analysis of the fine earth gave the following result:

RED SUBSOIL, IONE.

Insoluble matter.....	48.98	} 67.67
Soluble silica.....	18.70	
Potash.....		.22
Soda.....		.10
Lime.....		2.77

Sulphuric acid.....		.06
Water and organic matter.....		4.11
Total.....		99.76
Humus in surface soil.....		.607
Available inorganic.....		.567
Hygroscopic moisture.....		7.09
Absorbed at.....	10.5° C.	

The percentages of potash and phosphoric acid in this subsoil are quite low for California, the latter ingredient being rather deficient. Doubtless the analysis of the surface soil would have given higher percentages of both; but the high figure for lime offsets in a measure the defect, in rendering the other ingredients active. While the soil would not endure long without fertilizers under grain culture, it is certainly well adapted for fruit, and whenever production shall become stunted, phosphate fertilizers will first be needed. High quality rather than quantity is to be expected from this land.

The chocolate-colored valley soil is doubtless richer in plant food, and would probably answer excellently well for apricots and pears, while the red land is more especially adapted to vines, almonds, peaches, and olives.

No. 643.—*Black waxy adobe*, from the Colton ranch, at the foot of Mt. Diablo, on the Alamo road. This is an adobe soil of the most extreme character thus far met with. It bears a growth of fine white oaks, in rare places large sunflowers, but little or no grass. When dry it is of a dark slate color, and of stony hardness. When wet it is as adhesive as birdlime, and vehicles running on it soon have their tires thickly covered with a firmly adhering, uneven ring of adobe, which must be from time to time removed by means of a cutting tool, in order to ease the team and occupants. Like the other adobe soils, it “slakes” quickly on wetting the stony, hard, dry

lumps; but it is difficult to find any condition of moisture at which it is easily tillable. It is free from all coarse particles, all passing through a sieve having meshes of 1-50 of an inch. The mechanical analysis gave the following result:

No. 643.—BLACK WAXY ADOBE.

Fine earth All.

MECHANICAL ANALYSIS OF FINE EARTH.

Clay	43.54
Sediment of <0.25 mm. hydraulic value	34.05
Sediment of 0.25 mm.	1.59
Sediment of 0.5 mm.	2.59
Sediment of 1.0 mm.	3.13
Sediment of 2.0 mm.	2.79
Sediment of 4.0 mm.	2.26
Sediment of 8.0 mm.	1.76
Sediment of 16.0 mm.75
Sediment of 32.0 mm.	2.23
Sediment of 64.0 mm.	
Total	94.68

Few tillable soils thus far analyzed show a higher clay percentage than this, which is not unlike the "buckshot soil" of the Mississippi bottom, in the proportion of its finest ingredients; but differs in that in the latter there is a gradual, regular "tapering off" from the finest toward the coarsest, while in the California soil there is one of those sudden breaks in the percentages, which seems in all cases to imply heaviness in tillage. The chemical analysis resulted thus:

No. 643—CHEMICAL ANALYSIS.

Insoluble matter	50.96	} 59.98
Soluble silica	9.02	
Potash19
Soda74
Lime		2.47
Magnesia89
Br. oxide of manganese07
Peroxide of iron		11.09
Alumina		15.69
Phosphoric acid06
Sulphuric acid05
Carbonic acid		Trace
Water and organic matter		8.30
Total		99.52
Humus		1.50
Available inorganic83
Hygroscopic moisture		13.5
Absorbed at	13.5° C.	

The remarkably small percentage of potash, and the high one of soda shown in this analysis, led to a repetition of the determination, but with a similar result. The phosphoric acid likewise is in small supply, while the amount of lime (two and one half per cent) is high, and should render the soil susceptible of better tillage than it seems to attain in ordinary practice, especially as the humus supply is quite large. But of all adobe soils thus far examined, this is the poorest in potash and phosphates, and therefore the least durable in cultivation. The black adobe soils of the San Ramon Valley proper, how-

ever, differ materially in aspect from this, and are doubtless richer in plant food.

Nos. 708 and 709.—*Bench and mesa soils*, from the Zaca ranch, between the Santa Inez and Santa Maria Rivers, Santa Barbara County. Sent by Mr. Oscar Steinbach, of San Francisco. This tract is understood to be mainly mesa land lying between the two main streams, and intersected more or less by small creeks, running dry in Summer, but sometimes carrying considerable volume in Winter, and whose narrow bottoms are largely quite sandy and stony. The slope lands bear a growth of scattering live and white oaks, with alfilerilla, bunch grass, wild oats, etc. On the mesa proper, about one hundred feet above the drainage, the tree growth is more scattering, but otherwise the vegetation is the same as on the slope or bench lands. There is little difference between the soil and subsoil for two feet, or even more.

No. 708 was taken from the westward valley slope, about fifty feet above the level of the creek bed; to twelve inches depth it is full of rock fragments and gravel, which forms thirty-eight per cent of its mass. The fine earth passing through 1-50 inch meshes, is of dark mouse color, rather blackish—a sandy loam. At forty-two inches the color changes to a lighter hue, but the subsoil continues the same for several feet.

No. 718 was taken from the mesa about one hundred feet above the creek bed; a dark mouse-colored loam, with much gravel and some rock fragments, to the extent of 47.6 per cent. The fine earth is a sandy loam, like 708, only somewhat lighter colored. The analyses resulted as follows:

SOILS FROM ZACA RANCHO.

	No. 708. Bench Soil.	No. 718. Mesa Soil.
Insoluble matter.....	73.94 } 85.44	82.95 } 87.61
Soluble silica.....	11.50 }	4.66 }
Potash.....	.56	.49

Hygroscopic moisture.....	8.21	3.26
Absorbed at.....	14° C.	16° C.

There are no wide differences between these soils, save such as would be expected from the difference in location and the greater degree of moisture naturally prevailing in the bench land as compared with the mesa. Both have ample supplies of all the ingredients of plant food—potash, lime, phosphoric acid, and humus as representing the supply of nitrogen, and should yield excellent returns

under good cultivation and with sufficient moisture. As they are somewhat open they require deep tillage to enable the roots to penetrate readily through the gravelly subsoil, which, however, seems quite loose and pervious. In view of the climate and the inadequacy of water for irrigation, vine and fruit culture, but especially that of the olive, seems indicated as their most profitable use.

Soil and subsoil from Pomona Colony, Los Angeles County. Collected by Mr. N. J. Willson from Mr. House's place, three-quarters of a mile north ten degrees west from Pomona railroad station. The soil and subsoil scarcely differ in appearance down to thirty-two inches depth, and constitute a reddish-gray, rather sandy loam, easily tilled. Natural vegetation, alfilerilla, clover, malva, and rattleweed (*Astragalus* Sp.); produces about twenty-five bushels of wheat and ten tons of alfalfa per acre when irrigated, and is well adapted to fruits and cereals. The soil was taken to the depth of twelve, the subsoil from that of twelve to thirty-two inches.

SOIL AND SUBSOIL FROM POMONA.

This soil, judging from the great similarity of appearance, may be taken as representing a large area of similar lands in the San Bernardino Valley. The soil and subsoil differ but very slightly in composition. Both have a large supply of potash and lime, as well as magnesia, and in both the phosphoric acid is low; in the soil quite deficient, but apparently increasing with the depth. The supply of humus is very small, and its increase by green manuring would seem to be among the first needs suggested by the analysis. It must not be forgotten, however, that in these dry regions the surface soil is often of less importance than the subsoil, within which the roots must remain in order to be secure from heat and drought. Evidently such soil, while at first capable of high yields, will soon need phosphate fertilizers for the continued production of shallow-rooted crops at least; while alfalfa, vines, and other deep-rooted plants, will be able to draw upon the deep subsoil for their supply of that ingredient for a long time to come.

EXAMINATIONS OF TULE, MARSH, AND ALKALI LANDS.

TULE AND MARSH SOILS.

It should be remembered that the tules of California are of two distinct kinds, viz.: the land of the salt or tide-water lands, and those which are not now reached by saline tide-water, or fresh-water tules. Of the samples examined, No. 720, from Roberts' Island, belongs to the latter class, while the other two are of the salt marsh character, as is shown by their high contents of soda.

No. 720.—*Sediment soil from Roberts Island, San Joaquin County.* Sent by Mr. J. W. Ferris, of Stockton, on behalf of the Glasgow Land and Improvement Company. The sample is slate colored when dry, darkens greatly in wetting, and shows visibly the remnants of vegetation contained in it. The coarser part of this was taken out by sifting before analysis. It is of fine texture, with very little coarse sand, all passing through the sieve of 1-50 inch meshes. On heating it gives off a peaty odor, and becomes quite light colored and somewhat coherent, showing a considerable amount of clay in its mass.

No. 213.—*Soil from Novato Meadows, near San Rafael, Marin County.* Sent on behalf of the same interests by Mr. Christensen, the local superintendent. This soil is of a whitish gray tint, and contains many streaks of vegetable remains intermixed by the plow, it having been plowed once; appears to be more sandy than the Roberts Island soil. Here also the undecomposed vegetable remains were removed by the 1-50 inch sieve, the analysis representing the fine earth passing through. The soil is of a slightly brackish taste, and yields to water a somewhat brownish tint, showing that it is in an acid condition, as usual in such soils. The analyses resulted as shown in the table below:

No. 720—TULE SOILS.

	Roberts Island.		Novato Meadows.	
Insoluble matter	40.65	} 61.83	39.70	} 64.65

Humus		2.36		1.54
Available inorganic57		.31
Hygroscopic moisture		10.44		17.08
Absorbed at	17° C.		9° C.	

Taking into consideration the difference in location and condition, the two soils are not as unlike each other as might have been ex-

pected. The Novato soil shows by its high percentage of alkalies and of sulphuric acid (chlorine was not determined), the presence of the ingredients of sea water. Its potash percentage is extraordinarily high. Lime is in full supply, but phosphoric acid is only in moderate proportions, as in most California soils. Humus is, of course, in abundant supply, but is in an acid condition, requiring aeration, and would doubtless also be benefited by the use of some lime or marl. The high absorption of moisture is largely due to the presence of so much vegetable matter.

The Roberts Island soil, being thoroughly leached by fresh water, has less of potash as well as of soda, but still a full supply of the former. In lime it falls below the soils of the valley at large, much of it having, doubtless, been washed away in solution; and an addition of lime to the soil would doubtless be effective in moderating the "running-to-weed" which is noticeable in these lands, and is explained by the heavy supply of active humus, and, therefore, of nitrogen. But the phosphates are, again, only in somewhat scanty supply, and will doubtless be the first want felt in cultivation. For the present these lands are understood to be profusely fertile, sometimes embarrassing the farmer by the heavy stalks of the grain, in regard to the coarseness of his hay.

No. 787.—*Marsh soil from Grizzly Island, Sacramento County*; sent by Mr. Warren Dutton, for examination as to its being sufficiently substantial to become a soil when cultivated. The soil resembles that from Novato meadows, but contains a much larger proportion of vegetable matter, and is very spongy. After drying at 100°, it lost 29.7 per cent on ignition, showing that the surface to the depth to which the plow can reach is composed, to the extent of nearly one third of its weight, and quite half of its bulk, of undecomposed vegetable substance. It is, therefore, almost too much of a "muck" to be directly available for cultivation in its present condition.

Alkali salts from the "wire-grass land," near Visalia, Tulare County. Leached from a sample taken in the wooded flats, two miles west of Visalia (soil No. 585; see Report of College of Agriculture for 1882, page 26). This soil is a very productive one, and the analysis shows unusually high percentages of potash, lime, and phosphoric acid. It being quite light in texture, the alkali does not interfere with its tillage, although the black rings it leaves upon evaporation of puddles of water standing on the soil show that it contains a large amount of carbonate of soda. The soil was extracted with water, which dissolved 1.20 per cent of its weight. On ignition it lost about two fifths, or .50 of organic matter (dissolved humus); and of the remaining .76 per cent, .51 was again soluble in water, leaving .25 of insoluble residue, consisting mainly of carbonate of lime, with a little magnesia, as well as some iron and alumina (perhaps simply a little clay).

The soluble part, the "alkali" proper, was composed as follows:

ALKALI SALTS FROM NEAR VISALIA.

Carbonate of soda.....	45.3
Carbonate of potash.....	13.8
Chloride of sodium (common salt).....	4.4
Sulphate of magnesia (Epsom salt).....	8.1
Tri-phosphate of soda.....	10.4
Sulphate of soda (Glauber's salt).....	13.4

100.4

It thus appears that of the soluble part of this alkali, nearly two thirds (64.1 per cent) consists of carbonates, which, therefore, in the original soil would constitute .32 per cent of the weight of the soil, including nearly .10 of potassic carbonate (saleratus). The total of potash found in the original soil is 1.224 per cent, a very unusually high percentage. It is therefore quite clear that no potash manures will be needed in this soil for a generation at least; and so long as phosphate of soda circulates in the soil water, no bone meal will be called for. When this soil shall have been freed from its alkaline carbonates by the use of gypsum, it must become one of the most profusely fertile in the State.

Alkaline efflorescence, from soil on Kern Island, sent by Mr. Isaac B. Rumford, Bakersfield, February 27, 1883. The crust yields to water 21.15 per cent of soluble salts; the solution upon evaporation and ignition of the residue, gives:

Again soluble	94.94
Insoluble	1.70
Organic matter and water	3.34

The soluble part is composed as follows:

Sulphate of soda	70.61
Carbonate of soda	14.82
Chloride of sodium	4.13
Sulphate of potash	4.72
Carbonate of magnesia45
Total soluble	94.73

Insoluble part:

Carbonate of lime58
Carbonate of magnesia17
Sulphate of lime08
Iron oxide and alumina32
Silica55
Total insoluble	1.70

This "alkali" is accordingly of the milder sort, containing only a relatively small proportion of the noxious carbonate of soda. This explains why the crops on Kern Island can succeed in spots on which at times the white efflorescence can be bodily scooped off. Yet the transformation of the carbonate of soda, by the use of gypsum on the soil, would be an undoubted improvement.

EXAMINATION OF SOILS FROM SOUTHERN CALIFORNIA.

1.—SOILS FROM REDLANDS COLONY, SAN BERNARDINO COUNTY.

A set of soils representing this region was collected and sent by Messrs. J. S. Edwards and E. G. Judson, of Redlands. The colony is situated on a stretch of mesa at the head of Santa Ana Valley, sloping from the foothills to the sandy valley land, a distance varying from one to two miles, while the mountains are about seven miles away. The elevation ranges from 1,300 to 1,500 feet above sea level, the dis-

tance to the coast being about fifty miles. The sea breeze prevails in Summer, an east wind at night; light frosts in Winter are not severe enough to injure young orange trees. There is little natural growth on the soil save alfilerilla and scattering clumps of a low brush.

The prevailing soil of the region is a reddish-brown, sandy loam, containing a good deal of coarse, angular sand. This material changes but slightly to the depth of from three to four feet, where it is mostly underlaid by an orange-yellow hardpan, flecked with white, the white spots being grains of coarse, angular sand, or rather, granitic debris, consisting mainly of quartz and feldspar, with a little black hornblende, and magnetic iron ore (black sand). The hardpan appears in gullies and ditches everywhere, being usually many feet in thickness. It is quite porous, and its cement is a red clay, which softens in water with little difficulty. Dry lumps can also be crushed between the fingers, so that this subsoil may be considered as fairly penetrable by roots. Occasionally this hardpan approaches the surface so closely as to take direct part in the formation of the soil.

The analyses of the soil and subsoil hardpan resulted as follows:

	Red Soil, 12 inches in depth—No. 728.	Hardpan Subsoil, 3 to 4 feet—No. 734.
Fine earth.....	57.9	81.2
Coarse sand.....	42.1	18.8
<i>Analyses of Fine Earth.</i>		
Insoluble matter.....	69.56	67.14
Soluble silica.....	11.82	10.81
Potash.....	.85	.32
Soda.....	.11	.40
Lime.....	1.34	1.44
Magnesia.....	1.11	2.58
Br. oxide of manganese.....	.08	.07
Peroxide of iron.....	3.46	4.86
Alumina.....	8.87	10.08
Phosphoric acid.....	.06	.06

Absorbed at.....	12° C.	12.5° C.

As regards, first, the mechanical nature of these materials, it is striking that the hardpan subsoil contains so much less of inert sand than the surface soil, although its aspect would lead to the contrary conclusion. The hardpan is considerably more retentive of moisture than the surface soil, albeit the latter contains some humus to increase this factor. The humus percentage of the soil is, however, very small, and constitutes its chief defect, as in nearly all the mesa soils of the southern region. The hardpan stratum secures the land against waste of irrigation water, and against drought by its high retentiveness of moisture.

Chemically, the surface soil is rich in potash (so heavily drawn

upon by vines), while the hardpan is relatively poor in that substance. The lime percentage is the same in both, and is ample. In phosphoric acid, both alike are above the limit of deficiency, but the supply is not large, and will probably be the first needing to be replenished when the soil becomes "tired." Still, in view of the depth and perviousness of the subsoil, it may be long before this condition will make itself felt in the case of deep-rooted plants, such as vines and fruit trees.

Two other soil varieties are found in the colony, differing from the one analyzed mainly in the greater proportion of sand, which in one case is very coarse. The latter overlies the hardpan to the depth of four or five feet, and is reported to have shown an especially thrifty growth of the vines planted, though the latter have done well on all. Probably for the first years at least, the thriftiness of the vines will be in direct proportion to the depth of the surface layer of soil.

SOIL FROM THE CAJON VALLEY, SAN DIEGO COUNTY.

The Cajon Valley, which has come into wide notice only within a year or two, lies fourteen miles inland east of San Diego City, and may be approached either through Choya Valley or across the mesa; the highest elevation on the route being about 700 feet. The valley is of an irregularly rectangular shape, and is surrounded on all sides by hills, which on the north side form a gradually ascending rolling country, while elsewhere they are more abrupt; thus, with the angular form of the valley, giving rise to the name (signifying a box). The San Diego River valley forms the northern edge and the lowest portion of the plain, about 350 feet above sea level; from this there is ascent to 500 feet at the southern border, four miles away. There is also a slight slope from the east and west sides toward the center; the greatest diameter in this direction being five miles.

Several smaller valleys, among them Sycamore Cañon, come from the sides, but none of these have any permanent waterway. The river valley is well timbered with willow, sycamore, oak, and cottonwood. The rest of the valley is treeless.

The prevailing soil outside of the river valley is an orange or reddish-brown sandy loam, varying in depth from twenty inches to three feet without sensible change, the latter being the more common depth. The soil stratum is underlaid by a more compact clayey material, which, however, easily softens in water, and is readily worked when at all moist. This "hardpan," as it is sometimes called, is from fifteen to twenty-five feet in thickness, and is easily penetrated by the roots of trees and vines. Beneath it water is found in wells at depths varying from seven feet at the north end to thirty feet at the southern border; the water supply being about the same through the year, and, with but two or three exceptions, of good quality. The latter occur near the northwestern corner of the valley, where there are some alkali spots on a heavy dark adobe soil, of which small tracts are found on the western slope.

The analyses of the red soil, taken to twelve inches depth, and that of the subsoil, taken at three feet depth, both on the Cajon Land Company's tract, resulted as follows:

The "coarse sand" shown in the above table ranges from one twentieth to one fiftieth inch, and consists mainly of various kinds of quartz, with a little feldspar and some hornblende, evidently of granitic origin. Most of the grains are partly rounded, as though they had been transported some distance. While the subsoil contains somewhat more of this sand or debris, it also contains more clay than the surface soil, as is plainly shown in its higher attraction for moisture (7.5 instead of 2.3 per cent), and in its stiffer working when wetted. Being deeply covered by the light soil, this subsoil will be slow to lose its moisture in the dry season, and, being readily reached and penetrated by the roots, the remarkable fact that these lands can, to a great extent, be cultivated without irrigation, finds its explanation.

Chemically, the difference between soil and subsoil is but slight, so far as the supply of plant food is concerned. In potash they are nearly alike, and the supply ample; the phosphoric acid percentage is identical, and quite low, yet, in presence of a good supply of lime, especially in the subsoil, which is of such unusual depth, a deficiency in this respect will not be felt for some time to come by deep-rooted crops. Phosphates will doubtless, however, be the first fertilizers needed to be supplied when the time comes. As in nearly all upland soils of the southern region, the supply of vegetable matter is quite small, and should in cultivation be increased by every possible means.

All the characters of this soil point to its preëminent adaptation to the cultivation of fruits, especially of those which, like the grape, can readily be so managed as to draw but lightly upon the phosphates and nitrogen of the soil, by a return of the pomace and other offal. High quality rather than exuberant quantity of product is foreshadowed by the soil characters; yet the experience had shows that even in the latter respect, the Cajon lands are not behind, the great thriftiness of vine and tree growth being a matter of record; as is, also, the

excellent quality of both raisins and wine already produced. Regarding the latter, the analysis of a Zinfandel claret has been given and commented on in a previous bulletin (No. 9).

The soil of the San Diego River Valley is a fine sandy loam of a dark mouse color, glistening with mica scales; it becomes somewhat heavier downwards, and at three feet is chocolate-colored and moderately coherent. From its appearance it should be very productive.

EXAMINATIONS OF GRAPE-GROWING SOILS.

No. 727.—*Sandhill soil*, from a tract near Fancher Creek Nursery, about seven miles southeast from Fresno City; sent by Dr. Gustav Eisen, of Fresno. This is a representative sample of the soil of the higher sandhill ridges which traverse the Fresno country irregularly, mostly in a northeast and southwest direction. They are but slightly elevated above the general level of the country, and frequently without any obvious relation to the present drainage. Their sandy soil passes by gradations into the brown adobe bordering the foothill streams, or into the reddish, light loam of the country inland. In some cases their material was originally so loose as to be blown about by the wind. Their vegetation was the usual one of dry lands in the San Joaquin Valley, viz.: In Spring, more or less of the bright flora of gilia and dwarf sunflowers (*Baeria chrysostoma*), and during the dry season the drought-resisting turkey weed (*Eremocarpus setigerus*) and the blue camphor weed (*Trichostema lanceolatum*), with a few others. Since irrigation has become general, and the land has filled up with water, the deep, pervious soil of the sandhills has followed the general example of the plain in growing up into tall weeds, such as the pig weed (*Erigeron Canadense*), cockle bur (*Xanthium strumarium* and *spinosum*), sunflower (*Helianthus Californicus*), and others. This rank growth has encouraged the settlement of sandhill tracts, previously supposed to be too poor for profitable cultivation, until at present large areas of such soil are occupied by flourishing colonies, *e. g.*, the Scandinavian. The question now arises, how durable the productiveness of this soil is likely to be.

The sample sent by Dr. Eisen is very sandy and unpromising looking—probably the extreme of its kind. It was taken to the depth of 12 inches. The whole of it passes through the sieve of 1-50 inch meshes—a fine grayish-yellow sand, with black particles (which are mainly hornblende), while the white portion is a mixture of angular quartz, feldspar, and glassy particles of pumice-like aspect under the microscope—a material of which considerable beds are found on Kings River where it issues from its cañon in the sierra. On moistening, it scarcely becomes adhesive.

The chemical analyses resulted as follows:

	Fresno Sand Hill Soil. California.	Homochitto Bottom Soil. Mississippi.

It cannot be expected that in a soil containing ninety per cent of inert sand, large percentages of plant food should be found; and if the figures in the above table referred to a clay soil, or to a sandy soil of little depth, little could be said for it. But when such sandy material is from six to ten feet and more in depth, and roots can penetrate it as fast as they can grow, the case assumes a different aspect, since in that case the plant can and does utilize as a source of nourishment not (as is the case in close soils), twelve to twenty inches, but from three to eight feet, as is shown by inspection. To obtain the proper comparison with a clay soil, therefore, we should multiply the figures in the table by three or four, which will give respectable percentages of all, and a very high one especially of lime. By way of illustration, the analysis of a soil somewhat similarly circumstanced in the State of Mississippi, and noted for its high production of cotton for many years, is placed alongside. The sand hill soil is eminently a calcareous one, and as such its plant food is in a highly available condition. At the same time, the high figures for soda and sulphuric acid show the presence of some alkali, viz.: Glauber's salt, which is, with the lime, perceptible in the well waters of the region. Here also, however, phosphoric acid is relatively the lowest in supply, and will be first needed when fertilizers are called for by the falling off of production. At the same time the increase of the humus or vegetable matter of the soil should be favored in every possible way, since in so pervious a soil with so much lime, the supply will, under tillage, rapidly decrease in so hot a climate.

One point needs mention in this connection, viz.: the rapid rise of the bottom-water level that has lately occurred from the multiplication of irrigation ditches without any corresponding arrangements for drainage. Of course, roots cannot penetrate beyond the water level, and will not ordinarily exercise their functions even very close to it. When, therefore, the water is found in the bottom of fence-post holes, as is now the case in some fields of such soil, the available depth of soil is correspondingly reduced, just as though the bedrock

were found at the same depth. When this happens in the case of such deep feeding plants as the vine, it is simply ruinous, and if it does not result in the death of the vine, must greatly reduce both the quantity and quality of its product. This is a growing evil which even now sorely afflicts some vineyards, whose owners have never ceased to imagine that the one thing needful for success in that region is plenty of water, and that there cannot be too much of a good thing.

No. 799.—*Valley soil*, taken on a creek heading near Nun's Cañon, on Oakville and Glen Ellen road, Napa County. The valley is a narrow one, of a briskly flowing stream on the Napa side of the divide. It is not under cultivation near the point where the sample was taken, but the spot is remarkable for the luxuriant growth of wild grapevines, which cover not only the bottom, but run up high on the hillsides. The opportunity seemed a good one for ascertaining just what kind of soil the California wild vine delights in, thus giving a clue to the proper selection of soils on which it is to form the stocks. There is apparently little change in the soil for twelve or eighteen inches; it is of a gray tint, stiffish, and bakes very hard when dry, untilled; a light adobe or clay loam. For want of tools for digging, the soil was taken to the depth of eight inches only. It contains no coarse material save a fragment of slate here and there. Its analysis resulted as follows:

VALLEY SOIL, SONOMA MOUNTAINS.

Insoluble matter.....	63.55	} 69.09

The analysis shows good cause for the preference of the vine for this soil, which is an unusually rich one in all the elements of plant food. Its potash percentage is the highest thus far observed in California outside of alkali lands. Its supply of lime is not unusually large, but still abundant; its phosphoric acid percentage is among the highest thus far found in the State, as is, outside of marsh soils, that of humus. In fact, any plant whatsoever might be well pleased with such a soil; and the facts show that the native vine can be a rank feeder when opportunity is offered. These vines seemed to be young and had little fruit set; but whether the latter point was an accident of the season, or whether the soil is too rich for full bearing, requires farther observation to determine. If the latter be true, the remedy in such cases would lie in the use of lime around the vines.

Examination of soil from San Diego Peninsula, San Diego County.—This soil, samples of which were furnished by Mr. Charles Wetmore, represents the wider and more northerly portion of the low, sandy

peninsula which separates San Diego Bay from the ocean. It is covered with thick, low brush, of a kind not specified, and has not until lately been brought into cultivation. The surface soil is very finely sandy, of tawny tint, becoming more decidedly yellowish as the depth increases, and fairly yellow and somewhat more coarsely sandy at four feet depth. When wetted it becomes but very slightly coherent, and on drying falls apart by its own weight. The vigorous growth of chaparral upon it, however, suggests that it must have some substance, and this is confirmed by the following analyses of samples representing a tract of about 2,500 acres:

It is needless to say that soils containing from ninety-one to ninety-three per cent of sand cannot contain high percentages of plant food, as compared with loam or clay soils. But the extreme penetrability of such soils by the roots renders what plant food they do contain extremely available, and as a matter of fact, when of considerable depth, such soils are often both productive and durable.

In the present case the plant food percentages are no smaller than are found in many of the soils of the southeastern States that are profitably cultivated in cotton, although of much less depth. Compared with these the supply of potash in the San Diego soil is fair, and the soda representing possibly injurious sea salts, is but sparingly present. The lime supply for so sandy a soil is very large, and speaks of the high availability of the plant food present. The supply of phosphoric acid in the surface soil is large for such a soil, and not deficient even in the sandy subsoil. The whole compares favorably with those soils of the Gulf coast, on which sea island cotton has been successfully grown for years, and which are equally or even more sandy. It is therefore certain to be found productive. Among fruits, the olive would probably be best adapted to the situation.

MR. J. A. BAUER'S PHYLLOXERA REMEDY.

As a general answer to numerous inquiries concerning the probable efficacy of the phylloxera remedy devised by Mr. J. A. Bauer, of San Francisco (viz., the introduction of finely divided quicksilver into the earth around the stock), regarding which several articles have lately appeared in the public press, the following points, based upon the known and observed habits of the insect, are here given in advance of the experiments which it is hoped will be extensively made during the coming season:

There can be no question as to the efficacy of metallic mercury finely diffused through the soil in killing the phylloxera or any other small insect remaining within its reach for any length of time. Apart from the experience long had in this respect in the means used for the preservation of various articles, insect collections, etc., from the attacks of small insect depredators, the direct experiments of Mr. Bauer on earth and roots infested with the phylloxera have been entirely conclusive as to the inability of the latter to live more than a few hours in the atmosphere created in a close space, or in earth, at the ordinary temperature, by finely divided mercury. The conclusion that a soil column of six or eight inches depth, impregnated with the mercurial vapor by intermixture with "blue mass," will effectually prevent the passage through it of the slow-going insect, is therefore fully justified. Many other substances might be used to act similarly in this respect, *e. g.*, gas lime; but none others thus far suggested possess the permanency of the mercurial preparation, and the entire innocuousness toward even the most delicate rootlets, unless perhaps in the case of the direct contact of the globules themselves. On this point certainly Mr. Bauer's inspiration has been a most happy one, and while the introduction of mercury into boreholes made in the stem of the vine has long been suggested and found to be useless, his suggestion is, so far as known, altogether new and certainly original.

Were it feasible to impregnate the *entire* soil of a vineyard with the mercurial preparation, the phylloxera, being unable to ascend to the surface, would probably in a few generations be compelled to succumb, as the "winged form" could not then perform its functions toward the renewal of the tribal vigor by sexual reproduction. Since, however, so extended a use of even this very dilute insecticide is hardly practicable on the large scale, it remains to be determined to what extent its use *immediately around the trunk of the vine*, in the manner proposed by Mr. Bauer, will be likely to serve the purposes of prevention and repression.

The interposition of obstacles to the passage of the insect along the stock was among the early suggestions of aspirants to the great prize offered by the French Government for the discovery of an effectual remedy. We have among the inventions aiming in that direction even a proposition to incase the stock in a plaster jacket of several inches thickness. It will be surmised that the sagacious insect was not long in discovering a convenient path outside of the lump of plaster toward the coveted roots.

In the case of Mr. Bauer's plan, however, the descending or ascend-

ing insect innocently crawls into a well-laid trap, which gives no outward sign, even by an obnoxious odor. According to the experience had thus far, it seems quite likely that the unwary travelers would find themselves ensnared before they had any intimation of danger; and as there can be no doubt that the great bulk of the ingress and egress ordinarily takes place along the trunk of the vines after the egg laid by some wanderer on the leaves or branches has hatched, it can hardly be doubted that a considerable repressive influence would be exerted by Mr. Bauer's remedy, even where the phylloxera already exists, and that it would also act as a fairly effectual preventive of infection for many uninfested vineyards.

Its *universal* efficacy is, however, limited by the fact that (as has been observed in Europe, and quite lately and very prominently in this State), not only the winged form of the insect, but even the young larval one, will ascend abundantly to the surface of the ground from shallow outlying rootlets, and will from thence progress slowly but surely over the surface to neighboring vines. Direct proofs of this fact have been had here within the last few weeks, and will be published in connection with other new observations, in a subsequent bulletin. It follows that when such shallow rootlets are abundant (as they are in some soils), the obstacle or trap placed along the stock may affect the welfare and diffusion of the insect only in a slight degree. It is still true that even in this case great numbers of the wanderers will perish without reaching the safe harbor of a root, since most of them will try the route along the stock, and will there succumb to the mercurial trap. Still some will be likely to find their way *down* to the superficial rootlets, as the multitude found its way *up* from them; and this will be the more surely the case the more the soil is liable to be summer-cracked, or the coarser its tilth. In close sandy and in well-tilled soils, on the contrary, the chances of stray insects descending by chance to such rootlets would be exceedingly slight, in case the stocks were all protected by the mercurialized earth. How great is the difficulty interposed to the progress of the insect on a sandy surface can only be appreciated by those who have watched the ludicrous antics it exhibits under such circumstances. The incessant tumblings and backslidings soon exhaust its energies, and show good reason why, notoriously, the phylloxera is comparatively harmless in very sandy, and correlatively in very well-tilled soils.

From the foregoing considerations those interested may readily infer how far in their particular cases the ingenious device invented by Mr. Bauer is likely to prove efficacious; and while still it will undoubtedly be far better to plant resistant stock and graft, those favorably situated, or those who have already planted the non-resistant vine, will do well to take the proposed remedy under careful consideration.

[When, a few years ago, the vineyard plot on the University grounds passed into the charge of the College of Agriculture, it was soon discovered that it was strongly infested with the phylloxera. It was at first intended to extirpate the pest as quickly as possible; but when it became obvious that the law intended to prevent the further spread from infested districts could and would not be enforced, the fact that there are no vineyards so situated as to be liable to infection through natural causes from this locality, while it offers an excellent oppor-

tunity for the systematic observation of the habits of the insect in this climate, and for experiments with remedies and resistant vines, caused the idea of the immediate extirpation to be abandoned in favor of the experimental use of the plot. It is hardly necessary to say that ever since, a rigorous system of disinfection has obviated all danger of the accidental transmission of the insect to uninfected districts. The summary report of Mr. Morse, given below, shows the results of this season's observations.—E. W. HILGARD.]

OBSERVATIONS ON THE PHYLLOXERA MADE DURING 1884.

It has been supposed heretofore that only a part of the recognized forms of the phylloxera exists in California. This apparent divergence from the natural habits of the insect has given direction to the investigations which have been carried on at the University.

A partial report on the forms found in our own vineyard plot was published in the report of the Agricultural Department for 1882, and may here be briefly summarized. It shows that the larvæ, and a small proportion of the wingless mother insects, pass the Winter in a dull, lifeless condition, but are easily brought to life and activity by a proper change in temperature; that the middle of April finds the adult mother beginning to lay; and that soon after young larvæ are produced and scattered to all parts of the roots. The increase is slow until about the middle of June. Shortly after, the larval form with rudimentary wings appears, and by the first of July the winged form is found fully developed. The eggs of the mother louse are most abundant at the end of the same month, and at the same time a decrease in the numbers of adult mothers becomes apparent; the maximum number of larvæ is also reached. Only a few eggs are usually found after October, and very little action is noticeable after November. The time of these changes, however, will vary greatly with the season.

In the laboratory it was found that a single insect produced seventy-five eggs, laid frequently at the rate of five per day; some days none at all were produced. Thirteen days are required to hatch them, and seventeen more for the development into egg-laying mothers.

The object of investigation since the above was published has been toward determining the existence, habits, and movements of less familiar forms.

The late rains this Summer have stimulated a generous growth of those finer roots on which the winged-form is produced in greatest abundance. Around such roots were placed properly arranged "traps," viz.: glass jars or bottles, partially buried in the soil. A rapid production of the winged form was noted from the twentieth of August to the beginning of September; some were developed as late as October tenth. As many as five eggs were laid by some of the confined winged insects, before death; none of these eggs, however, were observed to hatch, hence no sexual individuals were obtained.

In arranging the glass-jar "traps" the soil was considerably loosened up, and thus was prepared the way for the migration of the winged insects, which occurred about the twentieth of August, when they could be found in considerable numbers crawling about upon the small lumps of earth, preparatory to taking wing. Only one was actually seen to fly up to the vine, although others were found quietly fixed on the under side of some of the leaves. This passing through

the loosened earth, and later through the unmolested soil, continued up to the present time.

The insect in various stages of development could be found in the earth from the surface to the roots, the most incomplete forms being found deepest below the surface of the ground. Some were found under stones, and in such positions as to place it beyond a doubt that they passed through the changes underground, and came to the surface in a transformed condition, contrary to the accepted belief of a transformation at the surface of the ground.

A peculiar circumstance was noticed on the twentieth of August, in the appearance of a large number of larvæ upon the surface of the ground. They were found as much as two feet from the stock, and from three to twelve inches from the fine roots, as well as through the soil to the roots. The significance of their appearing in this manner can be appreciated when we learn that they crawl upon bits of rubbish, sticks, leaves, etc., upon the spot, and even take kindly to growing canes placed in their way.

Up to August twenty-sixth no specimens of the gall louse, or leaf-inhabiting form of the phylloxera, had been identified at the University or elsewhere in California, so far as known. At this time the fresh young leaves near the ends of three canes, which stretch from a "Canada" vine toward the infected stock, bore a few peculiarly formed galls, containing egg-laying mother-lice as well as eggs, and numerous larvæ. A few isolated and abandoned ones were also found on the old leaves nearer the stock of the vine. It thus seemed probable that the root-inhabiting form had here changed its habit toward that of the gall louse, a point still held in dispute by the French scientists.

An attempt was therefore made to produce more galls upon the foliage of the "Canada" vine by infecting it with larvæ from the roots of the adjoining infested stock. A cane was led from the opposite side of the resistant vine, and its terminal leaves fastened to an infested spot of soil. The leaves and part of the canes were soon covered with young larvæ, and a few quiet winged insects; the former passing freely about upon the leaves, but forming no galls, or at least, only doubtful and abortive attempts. Some of the young leaves upon the infected canes were pierced by young larvæ which had settled just outside of the fresh galls, and had remained until a red dead spot had been formed. Others of the larvæ were seen crawling about; but they did not readily establish galls. Contrary to the usual habit of the gall louse, they kept mostly upon the *under* side of the leaf. It thus appears that at least so late in the season, the change of habit from root to leaf is not readily made.

Of the known *enemies to the phylloxera*, only two forms were identified during our observations. The *phylloxera thrips* were seen passing about in considerable numbers upon the leaves and some even came from the galls, many of which they had cleared of their inhabitants. A few specimens of the *tyroglyphus*, or *phylloxera mite* appeared among the winged insects that were taken from the "trap;" they were also found upon the roots of adjoining vines. It is, therefore, probable that its usual enemies have accompanied the phylloxera to California.

Several practically important conclusions result from the above observations. It appears that the light Summer rains of the season have favored to an extraordinary degree the development and activity of the pest, especially of its winged form, most dangerous as the carrier of infection; and that this form was developed through the months

of July, August, and September, and a part of October, while the numbers and activity of the larvæ in ascending through and diffusing themselves over the soil, was greatest toward the end of August. Any measures to prevent the spread of the insect during the season should, therefore, be taken prior to August, at least.

It is also shown how readily the young insects will ascend through the soil from superficial rootlets, and will attach themselves to any object lying in their way, so that infection may be carried readily from one vineyard to another by the mere passage of a wagon, plow, or other implement, as well as through fruit boxes, prunings, and cuttings. Especially are the eggs of the winged form liable to be thus carried, even by gusts of wind taking up leaves, etc. The gall louse form, now also recognized here, adds danger to this vehicle.

Finally it is clearly shown that in ordinary soils no preventive used only *around the stock of the vine* can offer security against the ascent of either the winged or wingless form to the surface from outlying shallow rootlets, from which they can freely migrate to other uninfected stocks; and that, therefore, the utmost care alone can check the progress of the pest after it has once gained a footing.

CROP STATISTICS FOR 1884.

Below is given a carefully tabulated statement, giving full returns of the cereal crops of 1884, in the State of California, including corn, wheat, barley, oats, and rye, and giving for each cereal the acreage, the average yield in bushels per acre, and the gross yield in bushels, in every county in the State. The system under which these returns are made to the State Agricultural Society is yearly becoming more perfect, and if the coming Legislature makes proper appropriation therefor, as requested by the State Grange, their accuracy can be still further assured, and they will prove of incalculable benefit to the entire State. The accuracy of the table here given has been further assured by comparing the acreage with figures obtained from other sources, and wherever a difference existed the lowest figures have always been taken. It is, therefore, safe to presume that the estimates on yield are, if anything, a trifle under the actual facts.

In referring to the table, it must be noted that the acreage of wheat, for instance, does not represent the acreage actually sown to that cereal, but only the acreage actually cut for wheat. Much of the standing grain was cut for hay, and as the amount thus cut differs widely in different counties and in different seasons, many apparent discrepancies between the figures of this and previous years are accounted for. For instance, if, in a certain county, previous reports have indicated an increase of acreage sown to wheat over last year, while the present table shows less acres cut to wheat than last year, it simply means that the proportion cut for hay has been this year much larger than last.

As many will desire to compare this year's yield with that of last year, we give the figures for 1883, as taken from the report of the State Agricultural Society: Wheat—Acreage, 2,634,710; yield, 32,659,870 bushels; average per acre, 12.39 bushels. Barley—Acreage, 775,405; yield, 19,000,232 bushels; average per acre, 24.45 bushels. Oats—Acreage, 122,618; yield, 3,632,651 bushels; average per acre, 30.48 bushels. Rye—Acreage, 29,351; yield, 342,876 bushels; average per acre, 11.60 bushels. It will thus be seen that this year there are almost a million acres more than last year in wheat; that the average yield is four bushels per acre greater, and that the gross yield, 57,420,188 bushels, is the largest the State has ever seen, and places it, in amount of production, at the very head of the wheat-raising States of the Union. The largest wheat crop prior to this year was that of 1880. The exact yield for that year cannot be given, as no system existed for gathering proper data, but the best informed wheat men placed it at 1,500,000 tons, or 50,000,000 bushels. The acreage in barley has been increased almost 200,000 acres, and the gross yield has been correspondingly increased, the average per acre being about the same. In oats the acreage has increased one third, and the gross yield a trifle more, as the average has been raised two bushels. In regard to rye, it may be said that so little of it is grown in the State that it is very difficult to gather exact data as to the yield. Several counties, in which it is

presumed more or less rye is grown, have made no returns for this cereal, and for this reason it is possible that the total yield here given is smaller than it should be.

The figures here given for yield are in bushels, and may be reduced to centals by remembering that the number of pounds in a bushel are, wheat, 60; barley, 47; oats, 32.

THE LIVE STOCK INTERESTS OF CALIFORNIA.

BY C. M. CHASE, ESQ., OF SAN FRANCISCO.

CATTLE.

California is peculiarly adapted for the raising of cattle. It abounds with mountainous and rolling land unfitted for other purposes, heavy frosts preventing its use for vineyards and small fruits, and its precipitous nature, as well as distance from transportation, rendering it unprofitable for cultivation. These elevations are covered with rich and succulent grasses, wild oats, clover, alfillerilla, etc., which are fattening in their green state. Vast fields of wild oats, cured standing by the warm dry air of Summer, form excellent Fall pasturage, and seeding themselves, are reproduced annually by copious rains during the Winter and Spring months. Eight tenths of all cattle slaughtered are from the range, grass fed, and will bear favorable comparison with the stall fed cattle of the Eastern States. The basis of our horned stock were the original herds of the old Catholic Missions, and the immense bands of long-horned (so called) Spanish cattle owned by wealthy rancheros. These numbered tens of thousands, and were of little value, being mostly slaughtered for their horns, hides, and tallow. In size small, color undesirable, and temper vicious, they were almost valueless as commercial property. Upon the advent of the Americans the condition of things changed. Well bred Durham and Devon bulls were imported, the mean, cross tempered little Spanish *toros* were killed, and a determined effort made to "breed up," with the most happy results. The State now abounds with handsome, sleek, well fed animals, deep red in color, with short horns, well formed, heavy carcasses, most desirable either for stock cattle or the shambles. These are denominated American cattle, and are the result chiefly of the continued crossing, as before stated, of well bred Durham and Devon (principally the former) bulls upon the native, or, as they are technically termed, Spanish cattle.

The Durhams are the distinctive beef cattle of the State. They are a combination of the principal desirable qualities, milk, butter, and beef. Some difficulty has been experienced with thoroughbreds, imported, on account of their delicate nature and seeming inability to earn their living, but it has been demonstrated that the offspring of these very thoroughbreds, when born upon the range, and indigenous to the climate and locality, have proved themselves "rustlers" equal to the best descendents of the native breed. The bulk of the beef cattle of the State may be said to be of the short-horn variety. About twenty years ago, several small herds of Devon cattle were imported from the Western States, and an effort made to cross them with the graded Durhams, it being claimed that the Devon, being a mountain cattle, were especially adapted to such a rough country as California. The

experiment failed to change the settled convictions of stockmen, and was abandoned. Within the past year it has been renewed, but so recently as to prevent any practical demonstration as to its feasibility.

Within the same period there have also been several importations of the Hereford or "bush" cattle of Australia. These animals have been warmly pressed upon the attention of California stock-raisers as a breed preëminently qualified for the steep mountainous ranges of our State, and as being "rustlers" of the highest type. These cattle have been absorbed by some of our heaviest stock-raisers, who propose giving them a fair and thorough trial. Already most favorable reports are received as to their capacity to take on and retain flesh, although scarcely acclimated. They compare favorably with the Durham in form and size, and are said to dress equally as well. Attention has also been drawn to the Holstein, or Dutch cattle, and the Aberdeen, or Polled Angus. The former are said to be rapidly becoming one of the "fashionable" breeds at the East. A number have been imported into California, and they seem to be growing in favor. They are of fair size, great docility, and yield a prodigious quantity of milk which is said to contain great cheese-making qualities. They, as well as the Herefords, have prominent advocates of their value as beef cattle. The Polled Angus are a recent importation, and their value to the stock-raising interest is yet to be determined. The non-horn feature seems to commend itself, as shipment of cattle is, here, usually made by rail, and the lack of horns deprives them of one great means of inflicting injury upon each other when closely confined. These cattle are of fair size, and it is claimed that the beef equals the best Short-horn, being mottled, or marbled, a distinguishing mark of high-bred cattle. A small number of Ayrshire cattle have also been imported, and have been favorably received, but for beef-producing qualities the Durham or Short-horn claims preëminent consideration.

For dairy purposes the Jersey cattle have undoubted preference. Under this head are classed Alderneys. A few of the other Island cattle—Guernseys—have been imported, but they cut no figure. The Jersey will, without doubt, be the chief dairy cattle of the State; that is, as the foundation. From them, in conjunction with well-bred Durham cows, are produced a race of dairy animals that cannot be excelled. With the production of the Durham is combined the richness and quality of the Jersey. As a family cow, a home pet, noted for docility and all the good qualities that distinguish a first-class milch animal, the Jersey—Durham grades—are entitled to most honorable mention. The dairy interests of California are very important, and are conducted with a high degree of intelligence. Every effort is made to increase production and quality, and no expense is spared to secure animals specially noted for their milking strains. The herds of pure cattle are numerous; all animals are properly registered, and due care is taken to keep the various strains of blood pure and undefiled.

HORSES.

Horses are numerous in California, and the various breeds extensive. In its primitive days the same state of affairs existed as with cattle. The native animal was the well known "mustang," a wiry creature, scarce fifteen hands, full of fire and of wonderful endurance. Its origin is in doubt. The best accepted theory is that it is

the descendant of the Spanish horse originally introduced into Mexico during the time of the Montezumas. As a vaquero or cattle horse, he has no equal. Of great intelligence, supple as a cat, and with the tenacity of a bull dog, he ably seconds the efforts of the rider, and never fails to run down the fiercest bullock of the band. At *rodeo* he is omnipresent, flying hither and thither, now in full career after a maddened steer, anon, like a statue, his mouth, sensitive to the slightest touch, having given the warning that the *lasso* has been thrown and he is to perform his part, that of holding the *lariat* taut until the infuriated animal can be properly secured. Americans were prompt to see the value of this useful animal, and their efforts have been directed to increasing the size without destroying the peculiar characteristics of the breed. This has been accomplished by coupling the thoroughbred with approved mustang mares, producing a race of animals unequaled in the world for the purpose for which they are intended. Another use for them has been the selecting those with trotting gait and breaking them to harness for stage purposes. With six and even four of these animals and convenient relays, most wonderful feats of staging were performed in the early days of this State. The usefulness of the California mustang is universally recognized. But the rapid settlement of the State required other breeds of the horse. Its pastoral nature to a great extent disappeared, and the wants of agriculture and commerce, as well as the requirements of a higher type of civilization, demanded the most improved strains and those best adapted for these various purposes. All sections of the world were drawn upon. The Clydesdale, Percheron, Norman, English Shire, and other breeds of draught animals were largely imported and judiciously crossed, in most instances with beneficial results. Extensive importations were made of the American trotting horse, a distinctive breed of animals, exclusively intended for road purposes and light harness service. Expenditures extending into the millions have been made in the endeavor to improve and perfect this wonderful breed with entire success. The desideratum of the American trotting horse is speed combined with pure gait, fine form, and perfect action. California has the proud honor of leading in this important class, its young horses holding the first rank in these essential particulars. The thoroughbred also has not been neglected, and vast sums have been paid for the highest type of the English thoroughbred and his immediate descendants, with the laudable purpose of excelling in this particular sphere. The climate of California seems so peculiarly favorable to the breeding and development of the equine race that it has been not inappropriately named the "home of the horse."

SHEEP.

California is essentially a sheep country. Its wild, rugged nature renders a large portion of it worthless for cultivation. Not only this, but its precipitous cañons, and gulches, and sparse vegetation upon mountain sides, renders such land valueless as cattle pasture. Upon such ground sheep may be profitably kept, but only certain descriptions—the Merinos. Properly speaking, it should be said the Spanish Merino. This animal seems created for California; good for wool, good for mutton, a fine herder; it has all the qualities to commend it. The French Merino partakes of these good qualities to a limited extent, and a cross of the two has proved successful; but the

distinctive breed of sheep, good for all purposes—like the Durham or short horn cattle—is the Spanish Merino. Small bands of Cotswold, Southdown, Leicestershire, and Shropshire have been imported but not extensively. Sheep bred exclusively for mutton, or, to speak generally, “short wool sheep,” will be in but little favor until the State becomes more densely settled and farmers find it to their advantage to keep a few head upon their meadows and in close proximity to their barns.

SWINE.

The raising of swine in California is extremely profitable. Enormous quantities of pork are consumed by the Chinese, and the meat, in its cured form, finds ready sale. Bacon is still the staple diet throughout the mining regions, and the demand far exceeds the local production; the importation of hams, sides, etc., being an important item against the State in the balance of trade. Hogs on foot command from five to eight cents the year round, according to quality, season, and demand, and, as remarked above, “hog raising” is one of the most remunerative branches of industry. The expense of keeping range hogs is but light, mast being plentiful, while the marsh lands furnish abundance of the young, tender tule roots, much relished by swine. The Berkshire is the favorite breed, the black strain being preferred, owing to the intense heat in the sections best adapted for raising swine, it being found that the backs of the white variety blister or scald more readily from the effects of the sun’s rays. Formerly the Essex were greatly thought of, but the size of the Berkshire and its great strength, which enables it to make its way through the thick chemisal and woody copses and plow through rough and swampy marshes, has given it the preference. The Poland-China attracted attention for a short time, but the interest in them has abated. The meat proved soft and flabby, and being of an indolent, lazy nature, they were not adapted for rough ranges, becoming footsore and easily discouraged. The Durocs or Jersey Reds are a new variety that is rapidly coming into favor. Several importations have been made into this State, and they are spoken of in high terms. In form and habits they resemble the Berkshire, and it is claimed they are an offshoot of this breed, which, by careful incrossing, has been made to assume an individual form sufficient to warrant the claim of being a distinct variety. There is no occupation of a similar character that can be entered into in California more productive than the raising of swine. San Francisco, its large commercial center, would prove an almost unlimited consumer. Its vast shipping interests require quantities of salted meats, its local consumption of cured and fresh pork is large, while the neighboring Territory of Arizona is a prompt and ready customer for every pound of bacon prepared in Southern California. As a business enterprise, to one at all conversant with this branch of stock raising, it offers a most inviting field.

I have briefly alluded to the most prominent descriptions of live stock which have been introduced and are being bred in California. To elaborate farther would take more space than can be assigned this article. Mention should be made of the breeding of mules which is pursued upon an extensive scale by several of our large stock raisers. Heavy sums have been paid for jacks, imported direct, and a creditable rivalry exists to produce the largest and best formed animals. These find ready sale, and at remunerative prices. Something

might be said of the Angora goat interest—a somewhat important one, as it serves to utilize wild, inaccessible land, otherwise valueless. The grade kids furnish an excellent article of food, and the skin of the goat is tanned and made into gloves which are much sought for, thus creating an additional manufacturing interest.

It would be superfluous to dwell upon the advantages presented by California as a stock raising country. Her incomparable climate renders it possible to excel all other States in the percentage of production. The mild Winters and early grass render easy the care of animals during gestation, and affords ample protection to young stock from the period of birth. Diseases so disastrous to cattle and horses east of the Rocky Mountains are unknown here. All branches of the industry are conducted upon an intelligent basis, and earnest efforts are made to improve and grade up every description of stock. Although a youthful State, California can boast of the most extensive breeding farms in the United States, if not in the world. State pride, in this particular, prevails to an eminent degree, and each new triumph is hailed with joyful acclaim. With such energy, encouraged by popular enthusiasm, who can doubt that our beloved California will maintain her prominence as one of the leading stock-producing States of the Union?

RAINFALL AND WEATHER REVIEW.

FROM SEPTEMBER 1, 1849, TO DECEMBER 31, 1884.

BY JAMES A. BARWICK, OBSERVER SERGEANT SIGNAL CORPS U. S. A., IN CHARGE OF THE U. S. SIGNAL OFFICE IN SACRAMENTO, CALIFORNIA.

RAINFALL FOR THE WINTER SEASONS.

The following tabulated statement shows the rainfall and number of days that rain fell for each Winter month; also, the total rainfall and total number of days that rain fell during the entire Winter seasons; the Winter seasons beginning with the Winter of 1852-3, and ending with the Winter of 1883-4. The three Winter months composing the Winter season that gave the heaviest rainfall was during the Winter of 1861-2: 27.94 inches. The driest Winter was that of 1863-4: 3.08 inches. The mean average rainfall for the Winter season, for the past thirty-two years, was 11.393 inches. We might judge from this that we should never have a Winter season of over twenty-eight inches, or one of less than three inches rainfall:

WINTER OF—	DECEMBER.		JANUARY.		FEBRUARY.		Total for Winter Months.	Total No. Days for Winter.

MEAN SPRING RAINFALL.

The table below will be found to contain the record of rainfall and number of days rain fell during the Spring months and for the Spring season. It informs us that the wettest Spring season was that of 1880—16.66 inches; and the driest was that of 1857—.68 of an inch; the mean average for thirty-two years being 5.358 inches, showing a deficiency of nearly 5 inches in the dry season of 1857, and an excess of 11.532 inches during the wet Spring of 1880, as compared with a thirty-two years average:

SPRING OF—	MARCH.		APRIL.		MAY.		Total for Spring Months.	Total No. Days for Spring.

MEAN SUMMER RAINFALL.

In the recorded statement below will be found the rainfall for each month of our dry or Summer season; also the total for the season, as well as the total number of days, etc., that rain fell. The average for the thirty-two years past is .170 of an inch. The Summer season that gave the most rainfall was that of 1884—1.45 inches. But five seasons of the thirty-two gave none, those being 1859, 1863, 1867, 1878, and 1883:

SUMMER OF—	JUNE.		JULY.		AUGUST.		Total for Summer Months.	Total No. Days for Summer.

YEARLY AND SEASONAL RAINFALL, ETC.

The instructive tabulated information below gives the rainfall annually—that is, from January to December of each year—for thirty-two years. Also, the rainfall by seasons, beginning with September 1st of one year and ending with August 31st of the next year, the wettest season being 1861–2—35.56 inches; the driest that of 1863–4—7.86 inches; the wettest calendar year being 1880—31.99 inches; the driest being 1877—8.43 inches; the mean average seasonal rainfall for thirty-one years being 19.143 inches; the mean average for the year, or the mean annual average, being 19.480 inches. The difference between the mean average rainfall, calculating from January 1st to December 31st of each year, and from September 1st of one year to August 31st of next year, is only .337 of an inch in favor of the calendar year:

YEAR OF—	Yearly Rainfall.	Total No. of Days Rain Fell.	Season of—	Rainfall—Inches.	Total No. of Days.
1853 -----	19.99	51			
1854 -----	19.93	62	1853-54	20.06	51

* Mean for thirty-two years.

† Mean for thirty-one seasons.

MEAN WINTER TEMPERATURE.

The tabulated statement below shows the average temperature by months, and for the season also, of the Winter seasons, beginning with the season of 1853-4 and ending with the one of 1883-4; also, showing a mean average for thirty-one years. Judging from the average temperature for each season, we must conclude that the season of 1879-80 was the coldest—44.5°; the warmest being the season of 1881—51.0°; the mean average of thirty-one years being 48.3°:

WINTER SEASON OF—	Mean Temp.— December.	Mean Temp.— January.	Mean Temp.— February.	Mean Winter Temperature.

MEAN SUMMER TEMPERATURE.

The average temperature in the following table is for the Summer months and for the Summer season, showing by their average temperature that 1866 was the warmest—74.8°; and the coldest to have been 1880—69.1°; the mean average for thirty-two years is 71.7°; the season of 1866 being 2.9° above the mean average, and 1880 being 2.6° below the mean average for the past thirty-two years. It also appears that the mean average temperature for the past thirty-two years for June, July, and August, was in the seventies, which gives us to understand that the three Summer months are usually of even degrees of temperature, with July a little the warmest of the three:

SUMMER SEASON OF—	Mean Temp.— June.	Mean Temp.— July.	Mean Temp.— August.	Mean Summer Temperature.
1853	77.0	75.0	71.0	74.3

MEAN AUTUMN TEMPERATURE.

The average temperature for the Fall season indicates the Fall of 1853 as being the warmest, it being 69.0° ; that of 1881 was the coldest, judging from the average temperature, it being 58.5° . The average mean temperature for thirty-two years past being 61.5° , showing the average of 1853 to have been 7.5° above the mean average, and that of 1881 to have been 3.0° below the mean average temperature for the past thirty-two years:

FALL SEASON OF—	Mean Temp.— September.	Mean Temp.— October.	Mean Temp.— November.	Mean Autumn Temperature.
1853.....	76.0	78.0	53.0	69.0

AVERAGE ANNUAL AND SEASONAL TEMPERATURES.

The statement below shows the average temperature, for each year, for thirty-two years, and for the Spring, Summer, and Autumn, for the past thirty-two years, and the average Winter temperature for thirty-one years. The coldest year, inferring from the average temperature, was that of 1880—57.5°; the warmest was 1864—62.8°; the mean average for the past thirty-two years being 60.2°, showing the coldest to have been 2.7° below the mean average, while the warmest year being that of 1864, when it was 2.6° above the mean average for thirty-two years. By careful study of the following table, one is struck by the slight difference between the coldest and warmest year, as compared with a thirty-two years average, generally not more than 3°. That is, we might safely say that the average temperature of any year is not likely to vary more than 3° from 60°, either way, between the hottest and coldest year, as compared with the mean average temperature for the past thirty-two years:

YEAR.	Mean Annual Temperature.	Mean Spring Temperature.	Mean Summer Temperature.	Mean Autumn Temperature.	Mean Winter Temperature.
1853	62.6	62.9	74.3	69.0	*-----
1854	59.5	58.3	72.4	60.0	47.3

Totals.....	1926.4	1903.1	2295.6	1967.1	1496.1
Averages.....	† 60.2	59.5	71.7	61.5	‡ 48.3

* The Winter tables are for the Winters from 1852-3 to 1883-4, both inclusive.

† Mean for thirty-two years.

‡ Mean for thirty-one years.

The following table gives the average annual barometer, thermometer, and hygrometer, the maximum and minimum temperature. The hygrometrical observations is the amount of moisture or relative humidity contained in the atmosphere, also the mean average for seven years:

YEAR.	Mean Annual Barometer.	Mean Annual Relative Humidity.	Mean Annual Temperature.	Max. Yearly Temperature.	Min. Yearly Temperature.
1878 -----	29.946	62.2	61.3	100.5--Aug.	23.5--Dec.
1879 -----	29.998	65.7	60.3	103.0--Aug.	25.0--Dec.
1880 -----	30.025	64.6	57.7	98.0--July	25.0--Jan.
1881 -----	30.026	66.7	59.2	98.6--July	31.9--Dec.
1882 -----	30.030	66.0	58.2	99.8--Aug.	27.0--Dec.
1883 -----	30.034	69.0	58.8	103.5--July	22.0 { Jan. Feb.
1884 -----	29.985	70.7	58.8	100.0--Aug.	21.0--Feb.
Totals -----	210.044	464.9	414.3	Highest, 103.5--1883.	Lowest, 21.0--1884.
Averages -----	30.006	66.4	59.2	-----	-----

The Winter tables following this statement show the average Winter pressure, temperature, and relative humidity, the highest and lowest temperature for the Winter seasons of 1877-8 to 1883-4, and the mean average for seven years:

WINTER OF--	Mean Winter Barometer.	Mean Winter Relative Humidity.	Mean Winter Temperature.	Max. Winter Temperature.	Min. Winter Temperature.
1877-78 -----	30.004	77.1	49.9	67.0--Dec.	27.0--Jan.
1878-79 -----	30.120	68.3	49.2	73.5--Feb.	23.5--Dec.
1879-80 -----	30.163	77.2	44.5	64.0--Feb.	25.0 { Dec. Jan.
1880-81 -----	30.116	84.0	51.0	67.0--Feb.	35.0--Jan.
1881-82 -----	30.169	76.4	45.9	62.8--Feb.	29.0--Dec.
1882-83 -----	30.189	77.9	45.4	71.7--Feb.	22.0 { Jan. Feb.
1883-84 -----	30.120	83.0	45.9	71.0--Feb.	21.0--Feb.
Totals -----	210.881	543.9	331.8	Highest, 73.5--1878-9	Lowest, 21.0--1884.
Averages -----	30.126	77.7	47.3	-----	-----

The average Spring pressure, relative humidity and temperature, the maximum and minimum Spring temperature, also the mean average for seven years past, will be found as follows, viz.:

SPRING OF—	Mean Spring Barometer.	Mean Spring Relative Humidity.	Mean Spring Temperature.	Max. Spring Temperature.	Min. Spring Temperature.
1878 -----	29.936	67.1	60.5	91.0—May	40.0—March
1879 -----	30.046	68.4	59.3	91.0—May	38.0—March
1880 -----	30.061	66.2	55.0	86.0—May	29.0—March
1881 -----	30.006	68.4	60.4	88.8—May	37.0—March
1882 -----	30.037	61.9	57.6	94.6—May	34.1—March
1883 -----	30.009	68.9	58.5	98.0—May	39.8—April
1884 -----	29.968	73.3	57.9	85.0—May	39.0—March
Totals -----	210.063	474.2	409.2	Highest, 98.0—1883.	Lowest, 29.0—1880.
Averages -----	30.009	67.7	58.5	-----	-----

The tabulated statement following indicates the average Summer pressure, relative humidity and temperature, the maximum and minimum Summer temperature, and the mean average for seven years:

SUMMER OF—	Mean Summer Barometer.	Mean Summer Rel. Humidity.	Mean Summer Temperature.	Max. Summer Temperature.	Min. Summer Temperature.
1878 -----	29.817	54.7	72.9	100.5—Aug.	49.0—June
1879 -----	29.821	52.7	72.9	103.0—Aug.	51.0—July
1880 -----	29.880	59.3	69.1	98.0—July	49.0—Aug.
1881 -----	29.903	56.3	68.5	98.6—July	48.0—June
1882 -----	29.898	57.0	71.1	99.8—Aug.	51.2—June
1883 -----	29.908	58.4	72.4	103.5—July	49.8—June
1884 -----	29.919	63.3	69.8	100.0—Aug.	52.9—June
Totals -----	209.146	401.7	496.7	Highest, 103.5—1883.	Lowest, 48.0—1881.
Averages -----	29.878	57.4	71.0	-----	-----

The following table shows the average Autumn pressure, relative humidity and temperature, the maximum and minimum Fall temperature, and the mean averages for the past eight years:

FALL OF—	Mean Fall Barometer.	Mean Fall Rel. Humidity.	Mean Fall Temperature.	Max. Fall Temperature.	Min. Fall Temperature.
1877 -----	29.973	54.3	63.4	88.0—Sept.	37.0—Nov.
1878 -----	29.991	54.4	62.5	92.0—Sept.	34.0—Nov.
1879 -----	30.000	65.2	60.9	96.0—Sept.	33.0—Nov.
1880 -----	30.035	54.9	59.9	92.0—Sept.	27.0—Nov.
1881 -----	30.026	58.4	58.5	96.0—Sept.	32.0—Nov.
1882 -----	30.024	69.6	58.8	99.6—Sept.	34.0—Nov.
1883 -----	30.011	68.8	60.1	101.0—Sept.	29.0—Nov.
1884 -----	30.000	69.1	60.0	93.5—Sept.	37.7—Nov.
Totals -----	240.060	494.7	484.1	Highest, 101.0—1883.	Lowest, 27.0—1880.
Averages -----	30.008	61.8	60.5	-----	-----

The table following will be found to contain the average direction of the wind, the total velocity, the rainfall, and the clear, fair, and cloudy days; also, days rain fell during the Winter months from 1877-8 to 1883-4:

WINTER OF—	M'n Winter Direction.	Velocity for Winter.	Rainfall for Winter.	Clear Days.	Fair Days.	Cloudy Days.	Days Rain Fell.
1877-78-----	S.E.	13.452	18.74	26	28	36	39
1878-79-----	N.	12.650	7.53	44	31	15	23
1879-80-----	S.E.	13.735	6.88	39	17	35	29

Averages-----	239.1	74.7	50.7	62.9

RECORDS OF RAINFALL.

INTERESTING DATA UPON THE SUBJECT FROM VARIOUS SECTIONS OF THE STATE,
COMPILED BY SERGEANT BARWICK, UNITED STATES SIGNAL CORPS.

The rainfall that was called for through Sacramento papers by Sergeant Barwick from all portions of the State some time ago has been in a measure quite successful, as he has received rainfall records from San Diego to Siskiyou Counties. The data received has been carefully compiled and averages calculated by the Sergeant, and ably assisted in his work by Lopez Maulding of this city. The tabulated matter will begin with San Diego County and come northward. The first table is from Poway, San Diego County, and covers a period from November, 1878, to December, 1884. The data was furnished by Adams Chapin of Poway, volunteer observer of the United States Signal Service:

RAINFALL AT POWAY, SAN DIEGO COUNTY.

Year	January	February	March	April	May	June	July	August	September	October	November	December	Total for Year	For Season of	Total for Season.
1878											.02	1.57

OAKLAND, ALAMEDA COUNTY.

The rainfall record below was taken by Mr. James Hutchison, of the Bay Nursery, Oakland, and furnished to Sergeant Barwick by Dr. J. B. Trembley, of Oakland. It shows the rainfall by months, by years, and by seasons, along with the monthly totals and averages for eleven years, extending from October, 1873, to December, 1884:

Year	January	February	March	April	May	June	July	August	September	October	November	December	Total for Year	Season of	Total for Season
1873										.60	.60	10.18

SACRAMENTO, SACRAMENTO COUNTY.

The following important table of rainfall at Sacramento, from September, 1849, to December 31, 1884, has been in the main published heretofore, but is now extended to include December 31, 1884, thus covering a period of thirty-five years and four months. It was collated from the records of Dr. T. M. Logan, Dr. F. W. Hatch, and those of the United States Signal Service office:

	Year	January	February	March	April	May	June	July	August	September	October	November	December	Total for Year	Season of	Inches
1849										.25	1.50	2.25	12.50		1849-50	36.00

RAINFALL AT FOLSOM, SACRAMENTO COUNTY.

The rainfall data tabulated below is from Folsom, Sacramento County, and was furnished Sergeant Barwick by J. H. Sturgis, volunteer observer of the United States Signal Service at that point. The rainfall is from September, 1871, to December, 1884, showing the totals, averages, yearly and seasonal averages for the past thirteen years:

Year	January	February	March	April	May	June	July	August	September	October	November	December	Total for Year	Season of	Total for Season
1871									spring	.55	1.95	13.12		1871-72	28.82
1872	5.50	4.72	1.60	.63	.75	spring	none	spring	spring	.25	2.80	6.53	22.78	1872-73	15.70

SHINGLE SPRINGS, EL DORADO COUNTY.

The following rainfall tables were compiled by Sergeant Barwick from data furnished him by Mrs. J. Carney, of Carson City, Nevada. The observations of rainfall were taken by her father, Doctor J. R. Edwards, an old pioneer citizen of Sacramento County; 1849 and 1850 were taken at Mormon Island, Sacramento County; the remaining years the rainfall was taken about two miles from Shingle Springs, El Dorado County, and cover a period of eighteen years for that point; and two years at Mormon Island. This gives El Dorado County a good rainfall record. This table, from 1850 to 1868, and Samuel Hale's, of Placerville, from 1874 to 1884, makes nearly twenty-eight years of rainfall records for that county:

Year	January	February	March	April	May	June	July	August	September	October	November	December	Total for Year	Season of	Total for Season
1849										.08	5.65	10.40		1849-50	39.25

PLACERVILLE, EL DORADO COUNTY.

The rainfall record at Placerville, El Dorado County, was furnished Sergeant Barwick by Samuel Hale, Superintendent of the El Dorado Water and Deep Gravel Mining Company, and covers a period of six years, from 1879 to 1884. Records were also kept from February, 1874, to February, 1877. The total for each year was, for eleven months in 1874, 33.23 inches; 1875, 44.84 inches; 1876, 39.21 inches; January and February, 1877, gave 11.05 inches:

Year	January	February	March	April	May	June	July	August	September	October	November	December	Total for Year	Season of	Total for Season
1879										3.47	5.28	7.53	16.28	1879-80	52.60

GEORGETOWN, EL DORADO COUNTY.

The rainfall at Georgetown, El Dorado County, was furnished by C. M. Fitzgerald, of the California Water and Mining Company, and extends from November, 1872, to December, 1884. The table shows the monthly and annual rainfall, also total amounts for each season from 1872-73 to 1883-84, with the monthly averages, and also averages for the year and season. This makes El Dorado County the best represented in its rainfall of any county in the State, viz.: Shingle Springs, Placerville, and Georgetown:

Year	January	February	March	April	May	June	July	August	September	October	November	December	Total for Year	Season of	Total for Season

* Total for six months.

REED'S RAILROAD CAMP, UPPER SACRAMENTO RIVER.

The following interesting rain data from Reed's Camp, on the Upper Sacramento River, shows that heavy annual rainfalls are a very usual occurrence at that point, according to the observations made by L. Aultenreith, and by him furnished to Sergeant Barwick. The table extends from January, 1880, to December, 1884, and shows the averages by months, years, and seasons. From 1882 to 1884, the record was kept at Dog Creek, near Reed's Camp:

Year	January	February	March	April	May	June	July	August	September	October	November	December	Total for Year	Season of	Total for Season
1880	8.60	3.34	8.32	19.26	none	none	none	none	none	none	none	32.07	71.59

YREKA, SISKIYOU COUNTY.

The rainfall table for Yreka extends from April, 1872, to December, 1884, and was furnished Sergeant Barwick by Mr. L. Aultenreith, of Yreka. The record is from the rain gauge of the C. P. R. R. Co. The record shows the monthly annual and seasonal rainfalls, the averages for each month during a period of twelve and thirteen years; also, the average for twelve seasons:

Year	January	February	March	April	May	June	July	August	September	October	November	December	Total for Year	Season of	Total for Season
1872				.24	.44	none	.14	none	.25	1.55	1.43	3.72

SCOTT VALLEY, SISKIYOU COUNTY.

The rainfall for Scott Valley, Siskiyou County, was tabulated from data furnished by Mr. C. H. Pyle, Yreka; the observations having been taken by Mr. Isaac Letcomb, of Scott Valley. This table is val-

uable for the length of time it extends back. The observations began in August, 1859, and run to December, 1884, without a break or any missing data therefrom:

Year	January	February	March	April	May	June	July	August	September	October	November	December	Total for Year	Season of	Total for Season

THE WEATHER.

DR. J. B. TREMBLEY ON THE METEOROLOGY OF OAKLAND.

Careful observations taken daily during the past year—Relative humidity—Barometrical pressure—Monthly meteorological synopsis—Synopsis of Oakland climate for nine years past—Table of comparative annual meteorology.

The following summary of the weather for 1884 was furnished Sergeant Barwick by Dr. Trembley, of Oakland:

Observations taken at 7 A. M., 2 P. M., and 9 P. M. of each day, by J. B. Trembley, M. D.; latitude, $37^{\circ} 48' 20''$ north; longitude, $122^{\circ} 15' 20''$ west; height of barometer above the sea, 24 feet.

BAROMETRICAL PRESSURE.

Table showing the mean, highest, and lowest monthly barometer; also, the monthly range. Barometer not corrected for elevation or temperature.

1884.	Mean Monthly Barometer.	Highest Observed Barometer for the Month.	Lowest Observed Barometer for the Month.	Range for the Month.
January	30.05	30.45	29.55	.90

RECAPITULATION OF TEMPERATURE.

Mean temperature of the year	55.85
Mean temperature of the warmest day, July 10th	72.66
Mean temperature of the coldest day, February 11th	36.00
Maximum temperature for the year, July 10th, 2 P. M.	88.00
Minimum temperature for the year, February 12th, 7. A. M.	28.00
Greatest daily variation, November 4th	30.00
Least daily variation, March 9th	1.00
Greatest monthly range, February	45.00
Least monthly range, June	10.00
Average daily range for the year	11.64
Average monthly range for the year	30.00
Yearly range of temperature	60.00

SEASONS.

Mean temperature of Winter	47.38
Mean temperature of Spring	55.59
Mean temperature of Summer	61.89
Mean temperature of Autumn	57.07
Difference between the coldest and warmest of Spring months	6.16
Difference between the coldest and warmest of Summer months	2.60
Difference between the coldest and warmest of Autumn months	3.99
Difference between the coldest and warmest of Winter months	1.56
Difference between the coldest and warmest months of the year	16.63

RELATIVE HUMIDITY.

Table showing the relative humidity, precipitation, weather, and direction from which the wind blew, from January 1, 1884, to December 31, 1884, inclusive.

1884.	Mean Relative Hu- midity	Rainfall in Inches.	No. of Clear and Fair Days.	No. Cloudy Days.	No. Days in which Rain Fell	No. Foggy Morn- ings	No. of Mornings Overcast	No. Mornings Frost	Wind— 1,098 Observations.					Calms

RECAPITULATION OF RELATIVE HUMIDITY FOR THE YEAR 1884.

Mean relative humidity for the year	85.39
Highest relative humidity during the year	100.00
Lowest relative humidity during the year, December 8th, 2 P. M.	38.1
Greatest variation of humidity in twenty-four hours, September 27th	41.00
Least variation of humidity in twenty-four hours, December 23d	.3
Rainfall in inches during the calendar year	38.20
Rainfall in inches during the agricultural year—1883-84	31.10
Rainfall in inches since July 1, 1884 (Bay Nursery)	11.18
Number of clear and fair days	260
Number of cloudy days	106
Number of days in which rain fell	85
Number of foggy mornings	19
Number of mornings overcast	77
Number of mornings that frost was seen	38
Wind, direction from southwest and west	382
Wind, direction from northwest and north	128
Wind, direction from northeast and east	62
Wind, direction from southeast and south	151
Calms	375

The following will more particularly illustrate the climate of Oakland for the nine past years, as it regards the equability of seasons and the difference between the warmest and coldest:

Years.	Spring.	Summer.	Autumn.	Winter.	Difference.
1876	54.46	60.40	57.75	48.20	12.20
1877	55.18	61.17	57.67	50.39	10.78
1878	55.73	59.36	56.92	59.12	9.24
1879	56.16	60.07	56.73	49.57	10.50
1880	52.97	58.95	55.86	45.38	13.57
1881	56.35	60.27	54.78	51.10	9.17
1882	54.12	60.06	56.44	46.80	13.26
1883	54.63	61.16	54.25	46.20	19.26
1884	55.59	61.89	57.07	47.38	14.51
Means	55.02	60.67	56.38	48.35	12.37

Difference between the warmest and coldest means of the seasons for nine years, is 12.37.

MONTHLY METEOROLOGICAL SYNOPSIS FOR THE YEAR 1884.

January—Was a wintry month for this climate; chilly, cold, frosty mornings, with frequent storms of rain and hard showers. The usual phenomena attending changeable weather were very marked and extremes reached. The casual phenomena, more particularly marked, was the appearance of the "Pon's Comet," which had been so long looked for, was plainly seen on the evening of the fourteenth, in the southwestern horizon, at an altitude of about forty degrees. Astronomical science had predicted the return of this comet in January, 1884, after an absence of a little more than threescore years and ten. Its making its appearance as predicted was surely a triumph of science, and a great gratification to its votaries. As seen in Oakland, it appeared to the eye like a star of the second magnitude, indefinitely luminous. The tail looked several degrees in length, pointing towards the zenith, wider than the nucleus, seemingly made up of parallel rays, the center rays the longest, terminating in a sharp feathery point. Luminous sun-risings and sun-settings were quite frequent, and a number of them were gorgeous to behold. They were more brilliant after the cold frosty weather began to abate, and the barometer was marking very high in its readings; especially when the atmosphere was warming up a few days previous to the heavy rains that occurred from the twenty-fifth to the end of the month.

February—Like the preceding month, was decidedly wintry. On the seventh a light fall of sleet and snow fell at 3 o'clock A. M., which covered the foothills white with snow, and a few following days and nights were the coldest of Winter; mud froze in the streets sufficiently strong to hold up buggies and their occupants as they rode over this very unusual condition of the streets; water-pipes in some localities froze and burst. On the twelfth and thirteenth in shady places it froze all day; ice formed in shallow pools of water one inch in thickness; a gale of wind prevailed from the northeast, filling the air with dust, sand, and a disagreeable chilliness piercing and biting to those who were compelled to be out of doors. Rain began on the fourteenth, which modified the temperature of the atmosphere, and on the fifteenth the rain fell in very hard showers, with a barometer reading of 29.36. Luminous sunsets were seen a number of times during the extreme cold weather, and preceding the high winds and storms.

March—Very rainy all the month; showers or light rain nearly every day. On the twenty-fifth very hard showers early A. M., showery all day; at 4:45 o'clock P. M., quite a severe earthquake occurred, vibration from northeast to southwest; buildings trembled, windows and crockery rattled in some localities. At 9:25 o'clock P. M. a vivid flash of lightning came, followed in quick succession with a loud peal of thunder; rain and hail fell for a few minutes very hard; some telegraph poles in the city were struck by lightning, split from top to bottom and broken off; the City Hall fire-bell was rung by the electric fluid, as it played with the wires of the Fire Department.

April—A pleasant month, with a large rainfall and growing weather. An earthquake occurred on the seventeenth, at 9:40 o'clock P. M.; a low rumbling noise accompanied it, and a sudden jog from the northwest towards the southeast; no perceptible vibration was noticed. Another light shock of an earthquake occurred at 11:30 o'clock A. M. on the twentieth; no vibration.

May—Was very pleasant; light showers of rain occurred at different intervals. On the seventeenth through the day there were strong indications of a storm or shower of rain; in the evening heat lightning flashed and lighted up the northern and northwestern horizon for an hour or more with electrical flashes. At 9:30 o'clock P. M. quite a hard thunder shower prevailed. Rain fell so as to form pools of water which ran off in the street gutters. The storm resembled an eastern thunder shower for a short time, more than had been observed in Oakland during the whole period of observations—eight years. Lightning played and darted in every direction, low thunder muttered incessantly in the distance, and rain fell in great drops at each electrical discharge.

June—The month will long be remembered among meteorologists as one very interesting in the various meteorological phenomena manifested. On the third, from 10 A. M. to 1 P. M., one of the most brilliant and well defined solar halos that is seldom seen, was observed. It was one of twenty-two degrees in diameter, giving out the prismatic colors very bright and clear; the inner edge of the halo was red, and the colors, as they extended to the outer edge, was of the color of a well defined rainbow; inside of this circle there seemed to be no light from the sun; the whole inner portion was dark up to the sun's disc, which shown or passed some rays of light, as often seen during a thick haze in the western horizon at sunset. Outside of this circle, the light of the sun was greatly obscured, fading from the bright orange color of the outer ring of the halo, into a dark pea-green or olive color, which extended over the whole visible horizon, giving a shadowy appearance to all terrestrial objects, similar to that which prevails at a total eclipse of the sun. At 1:30 o'clock P. M., a strong wind blew from the west, which dissipated the icy particles high up in the atmosphere, and with it the halo disappeared. This remarkable halo prognosticated the weather for the following ten days, and as was said at the time of observing it: that the violence of wind and storms which it indicated, foretold such another as this State or locality had not experienced for many years. The result of the forecasting was well vindicated—as all that remember the storms of June, 1884, will attest. In the agricultural portions of the State the early mown hay was much injured, and a great portion destroyed for use. Early fruits were also injured, but later ones were correspondingly benefited, as well as late sown grain.

July—No unusual weather prevailed—the month was pleasant.

August—On the fourth a light shower of rain fell at five o'clock A. M., continuing with a drizzling rain until 1:30 o'clock P. M. The amount of rain which fell was the first that had fallen in Oakland, that was susceptible to measurement, during the month of August, in eleven years. This rain extended in showers to the valleys lying to the westward of the Diablo range of foothills and mountains. With exception of rather more high overcasts in the mornings than was usual, the month was quite pleasant.

September—A general storm prevailed over the whole northern and middle portions of the State in showers and drizzling rain. On the seventh and eighth, overcast quite frequent; weather pleasant. The month ending on the thirtieth with a solar halo from 8 to 9 A. M., a gale of wind 12:30 P. M., and a light shower 3 P. M. Evening, clear, cool, wind northwest.

October—On the twelfth, thirteenth, and fourteenth, a rain storm

prevailed, with greater or less violence, over the whole agricultural area of the State. The storm injured some varieties of the grape crop very much, otherwise no injury was done.

November—Rather a pleasant month; no unusual meteorological phenomena; very light, drizzling rain and mists occurred several times with a few frosty mornings towards the last.

December—Was a regular Winter month for this State; frosty mornings; low and high fogs; high winds and gales; severe and continuous rain storms for days in duration. On the twenty-fifth low rumbling sounds of thunder were heard several times. Luminous and gorgeous sunsets and sunrisings were observed several evenings, and that which occurred on the morning of the fifteenth was grand indeed; the whole horizon was lighted up with a reddened glow, tinting every cloud with ethereal paint.

TABLE SHOWING THE COMPARATIVE ANNUAL METEOROLOGY OF 1876, 1877, 1878, 1879, 1880, 1881, 1882, 1883, AND 1884.

	1876.	1877.	1878.	1879.	1880.	1881.	1882.	1883.	1884.

MODIFYING CAUSES OF THE CLIMATE

ON THE

PACIFIC COAST OF THE UNITED STATES AND BRITISH COLUMBIA.

FURNISHED SERGEANT JAMES A. BARWICK, SIGNAL CORPS, U. S. A., SACRAMENTO, CALIFORNIA, BY DR. J. B. TREMBLEY OF OAKLAND.

It is said that every country in the world, to a greater or less extent, has a climate peculiar to itself. In many respects it may be similar to that of another, but not identical, for the various factors that go to make it are not always equally alike, or bring the same influences to bear on each individual region of the earth. It was once thought that climate depended mostly on latitude and the declination of the sun either north or south of the equator; but more recent observations show that many other causes which are independent of these modify temperatures and precipitation.

The western coast of Europe and North America are examples of similar climate, modified by the same corresponding causes, ocean and air currents. Without entering into an extended inquiry over the various portions of the world in comparing climatic factors, which would be uninteresting to a majority of readers and embrace more than is designed to be written in this paper; therefore, the knowledge, positive and theoretical, of the climatic conditions that are imposed upon the western slope of the Pacific Coast, bordering on the ocean, from Alaska towards the south, and the causes as far as observed, is all that would interest the local or general reader. The same general causes that modify the climate of Alaska, British Columbia, Oregon, and California, extending into Mexico, have long been known to meteorologists and those who have made physical geography a study. But the many local modifying influences that these great currents of water and air meet with, as they impinge upon the northwestern coast of the continent, by high mountain ranges, inland valleys, and solar heat, gives as various climates as the topography of the country is different where their influence is felt. The ocean current that modifies the climate of the Pacific Coast is a portion of the great equatorial current which is deflected northerly and easterly when it meets the eastern coast of Asia. This current, a portion of the warm equatorial current, as it flows toward the northwest, washing the eastern shores of China and Japan, takes the name of the Japan current, or Kuro-Siwo. At or near latitude 50° and longitude 170° , it divides; one portion, continuing northerly, passes through Behring Straits, the other south of the Aleutian Islands assumes the name of the Aleutian current. It advances eastward until it strikes the northwest coast of North America; then, turning acutely to the southeast, flowing along the western shore, until what is left is drawn into the great equatorial current at or near the Tropic of Cancer, again to make the circuit of nearly a quarter of a hemisphere. Various ele-

ments of this great current, when taken into consideration, that go to make it one of the physical constants in the formation of climate, seems as yet but partially understood. Its depth, width, velocity, and temperature have not been investigated as have some of the currents of the Atlantic Ocean. Professor Davidson, of San Francisco, seems to have been almost the only one who has given this subject any attention, with the exception of some casual observers, who have here and there made memoranda for their own curiosity. The professor starts with a maximum temperature of the Japan current of 88° Fahrenheit. At Alaska, 50.06° . Six to eight hundred miles west from San Francisco, 60.33° ; one hundred miles west, 55.05° . At the tidal station at Fort Point the mean temperature for eight years was 55.66° , that of the air being 54.97° . The mean temperature of the ocean nine hundred miles west of San Francisco for one year was 60.52° , as found by the ocean steamers going and coming from Yokohama to San Francisco. This shows a difference of temperature to be in the water of the ocean current one hundred miles to the west and that at the tidal station on shore to be $.61^{\circ}$ less; at six to eight hundred miles 4.67° greater; at nine hundred miles, 4.86° greater or warmer.

The great ocean current in flowing from its origin to the coast of California has parted with 32.34° of heat; or, in other words, has lost, from the average temperature of the equatorial waters (78°), 22.34° , and leaves an average surface ocean temperature, to the distance of 900 miles west of California, of 57.89° . The temperature of the air along the coast, and the water, hardly ever rises more than two or three degrees, and the above figures show only 2.92° for the average difference in temperature of the water and air over a large area of the ocean contiguous to the Pacific Coast, and gives an explanation of the low temperature at the base of the atmospherical column that rests on the ocean's water. Also the great freedom from rain during the Summer months, when the westerly winds overcast and fogs prevail.

For the purpose designed by this paper, the above is all the information that can be obtained bearing upon the temperature of the ocean's water in the vicinity of this coast, with the exception of the counter or eddying current, said to have been discovered by Professor Davidson; who in describing the great stream that flows across the ocean, remarks that "a branch of this current continues direct to the Alexandrian Archipelago, and, striking the southern part of the coast, is deflected to the northward and westward," and calls it the warm Alaska current, which causes the high isothermal lines that exist directly on the Alaskan coast.

The great aerial air current that moves with the ocean stream, is the counter trade wind of the northern hemisphere, and seems to determine the character of the climate, almost wholly, of California. As it strikes this coast it is always the high current, and flowing from a westerly direction changing but very little the point of the compass at the same date of time in each year.

It oscillates from the south of west at one portion of the year to the north of west at another, moving from north to south with the declination of the sun, and then back again. During the Summer season it blows nearly from the west, and in the Winter, being acted on by the polar winds, is given a more northwesterly direction.

Physical geography has so well described the great systems of atmospherical currents that it is superfluous to enter into a description of all the winds, and the laws that produce them. Owing to solar heat,

and the diurnal motion of the earth, three distinct belts or systems of winds are produced. Easterly winds in the tropical zone, westerly winds in the temperate zone, and northerly or northwesterly in the higher latitudes. These zones of wind move bodily to and fro with the vertical rays of the sun, toward the north in Summer, and toward the south in the Winter. On the movement of these zones of water and air, rests the causes of the wet and dry seasons over the great area of country bordering on the western coast of the United States.

The most philosophical and scientific dissertation, perhaps, on this subject, for depth of research, long and patient labor, appertaining to the wind currents, climate of California and contiguous territory, was made by the late lamented B. B. Redding, and read before the Academy of Sciences in San Francisco, in January, 1878. His observations are as follows:

As California is within the northern temperate zone, it is primarily to the movement as a body north or south of this belt of wind that we are indebted for our dry Summers and Winter rains. Where, within the tropics, the northeastern and southeastern trade winds meet, is a region of calms and rains. This belt of calms and rains, as has been stated, moves northward and southward with the sun's declination. Where, within the temperate zone, the northern and northwesterly winds from the polar regions meet the westerly return trade winds, is a region of storms and rains. These belts also follow the sun's declination north and south. Applying these laws to this coast, at our midsummer the vertical sun would be on the Tropic of Cancer, and in that vicinity the northeasterly and southeasterly trade winds would meet, create ascending air, consequently calms. This air, laden with moisture, would rise into cooler regions, when a portion of its moisture would be precipitated, making tropical rains. This air would flow north and south, towards the poles. Confining our view to that portion which would flow toward the north pole, the larger part of it must descend to the earth within thirty degrees of latitude, under the law as stated by Professor Henry. As in going north it continuously has to pass over a portion of the earth which is moving less rapidly than the portion it has left, it is deflected and becomes a southwest wind. The greater portion of this upper current having descended to the earth within thirty degrees, and returned to join the trade wind, the remainder would flow towards the pole, portions descending in its course at all points where the rarification of the air near the earth's surface would permit. These descending currents cause the local variable winds of our temperate zone, but the aggregate of all of them is the prevailing westerly return trade wind. The descending currents cannot give rain, as they only fall to the earth when they become colder than the air near the earth's surface. In falling they are constantly arriving at places of warmer temperature than those they have left; they, therefore, change to a condition of taking up moisture, rather than of parting with it. *Where the great body of the descending return trade wind reaches the earth between latitudes twenty-eight degrees and thirty-five degrees, must, therefore, on this coast, be comparatively a rainless region.* Other lessening portions of the upper current would pass on until they met the prevailing northerly wind from the polar regions, when their temperature would be lowered and their moisture condensed and fall as rain. The conflict of this descending current with the polar wind would create storms and give rise to electrical phenomena. The prevailing northerly polar wind reaches to about latitude sixty degrees, varied by the declination of the sun.

This view of the causes of the tropical, temperate, and polar zones of prevailing winds, is in accordance with the theoretical deductions of Professor Ferrell concerning the course of atmospheric currents moving on a sphere, and appears to be confirmed by the belts of low barometer prevailing in the vicinities of the equator, and of latitude sixty degrees. The polar wind, being colder, is heavier than the return trade wind, and where they meet, the tendency is for this polar wind to become a surface wind, and prevent the upper current from reaching the earth until it has been reduced to the same temperature. The operation of these general laws can be more clearly seen on this coast than on that of the Atlantic and Gulf States. There, the northeast trade winds are forced into the great caldron of the Gulf of Mexico. The Cordilleras of Central and South America and Mexico form a wall against their progress; they rise, turn to the north as an upper current, and return to the earth as southwest winds.

The Rocky Mountains, one great chain of which extends from the center of the continent northwesterly to the Arctic Ocean, assist in the deflection. The great prairies extend in an unbroken line in the same direction from the mouth of the Mississippi, to the same frozen ocean at the mouth of the McKenzie River, in about latitude sixty-two degrees. Professor J. W. Foster, in his work on the "Physical Geography of the Mississippi Valley," states that the sources of the Mississippi River are but 1,600 feet above the ocean. Professor Coffin has shown from the records in the Smithsonian Institute, in his article on the "Winds of the Northern Hemisphere," that between latitudes sixty and sixty-six degrees there prevails a belt of easterly and northeasterly winds. These winds, coming from the Arctic Ocean, meet the great chain of the Rocky Mountains, are deflected into northwest winds, and pass unobstructed along this great stretch of prairie land into the States east of the Rocky Mountains. The conflict between the northwest

polar winds and the moisture laden southwest winds from the Gulf of Mexico, gives all the Atlantic States north of Florida their Summer rains. As far back as 1850, Professor Espy, in his second report on meteorology to the Secretary of the Navy, without, at that time, more than suspecting the cause, reported as the result of a long series of observations, that in the northern part of the Atlantic States the winds generally, in great storms, set in from north of east, and terminate from north of west, and in the southern part of the Atlantic States they set in from south of east and terminate from south of west.

It is doubtful if the Atlantic trade winds ever give rain to California. That portion which passes the mountains through the valley of the Rio Grande, precipitating its moisture on the White Mountains and Black Hills of Arizona, which, by the meteorological records of the Smithsonian Institute, are shown to have an annual average of twenty inches of rain.

That these general laws may be applied to California as the cause of our climate, I will assume to follow a given portion of air along well known points on the coast. At midsummer, at noon, the sun would be vertical in Southern California just north of Cape St. Lucas. In this vicinity, this portion of air, having been a part of the trade wind, would have become heated and saturated with moisture. It would rise until it met colder regions, when it would part with some of its moisture; a portion would return to the earth within thirty degrees, again to join the trade winds, and another portion pass on towards the north as a part of the great upper current. Under the operation of Professor Henry's law, the greater part must return to the earth between latitude thirty degrees and, say, latitude thirty-five degrees; the remainder would flow on towards the pole until it met the prevailing northwesterly winds; at these points there would be fogs and Summer rains. Whenever the polar wind forced its way south of this, it would condense the moisture of these descending return trade winds and give rain. This they would do until they had passed so far south that their temperature would be raised to that of the descending return trades, when, of course, no moisture could be precipitated. It is these polar winds, forcing themselves among the descending return trade winds, that give British Columbia, Washington Territory, and Northern Oregon their Summer showers. Should they force themselves further south, they, in their passage, have to pass into warmer latitudes; they would also meet the heat of our great valleys and deserts, and become as warm as our prevailing Summer wind, and, therefore, could not give California Summer rains.

But, from midsummer, the sun is for six months moving south, taking with him the great belts of winds of the tropical, temperate, and polar zones, until, at our midwinter, his rays are vertical just north of the northern part of Chile, in South America. These belts, moving south with the sun during six months, the region of conflict between the polar winds and the variable winds which in Summer was over British Columbia, Washington Territory, and Oregon, has now moved south over Oregon and the northern and middle part of California. The temperature of the earth's surface and the air in contact with it, have been lowered by the withdrawal of the sun's more direct rays, and the polar winds are permitted to reach further to the south without increasing their temperature. The region of calms and the southern limit of the variable winds have, of course, also moved south with the sun, beyond the Tropic of Cancer. At this season, in the Pacific, the trade wind is not usually found north of latitude thirteen degrees, when, in Winter, the descending return trade wind, coming from the southwest, meets the coast south of Cape St. Lucas, it is forced by the Cordilleras and the configuration of the main coast into the Gulf of California, and is deflected into a course from the southeast, or, to be more exact, as shown by the records kept by Dr. Gibbons, into a course from the south-southeast. Without doubt, the southwest return trade wind which strikes the coast of Lower California in Winter north of Cape St. Lucas, is deflected by the high mountains parallel to the shore, and also passes over our coast counties as a southeast wind. H. S. Warner, in a paper read before the American Association for the Advancement of Science at its Baltimore meeting in 1858, was the first to note the fact that the waters of the Gulf of California supply the moisture to the southeast wind that bears to us our rains. It may be objected that the Gulf of California has not sufficient area from whence could be delivered the great volume of southeast winds that, at times, during our Winters, flow over this State. The gulf is not the cause of this wind, but it is the channel through which it flows, and gives to it direction. When the sun is vertical on the coast of Bolivia, just north of Chile—at our midwinter—he has carried south with him the northeast trade winds, until, as has been stated, they do not prevail north of about latitude thirteen degrees. The region of calms, where the great body of the upper current returns to the earth again to join the trade winds, is, at this season, between latitudes thirteen and eighteen degrees. North of this region of calms, at this time, those portions of the upper current which pass further north, descend to the earth, under Professor Henry's law, as southwest winds. At latitude twenty degrees, the west coast of Mexico projects a bold headland into the Pacific Ocean, known as Cape Corrientes. South of the Cape the trend of the coast for nearly two thousand miles is east-southeast; north of this cape, the trend of the coast for more than one hundred miles, to Mazatlan, is north; from Mazatlan to the head of the Gulf of California, a further distance of six hundred miles, it is north-northwest. The Sonora arm of the Cordilleras rises above the table land of Mexico, at latitude twenty degrees, and runs north-northwest along the coast, nearly to the head of the Gulf of California. All of these southwest winds that strike the coast from Cape Corrientes north to Cape St. Lucas, are deflected by these mountains and forced up the Gulf as south-southeast winds. The United States Coast Survey have lately completed the survey of this gulf and parts of the Mexican coast north of Cape Corrientes. When their record of observations of the course of the prevailing winds in Winter, the barometric pressure and the temperature of the air and water is published, I feel

confident that it will be found that the southwest return trades prevail in Winter north of Cape Corrientes, and are turned by the mountains and the coast up the Gulf of California, and so over this State as our southeast winds. It comes from this gulf warm and laden with moisture, and passes over the Colorado and Mojave deserts. These deserts, as shown by the meteorological records of the Smithsonian Institute, have a mean Winter temperature of from forty-eight to fifty-six degrees. This is not sufficiently low to precipitate its moisture, and it passes on until it meets the Sierra Nevada and Coast Range. In ascending these it rises into cooler regions, finds a mean Winter temperature of forty degrees, and gives up some of its moisture. When it flows down into the southern end of the great valley of the Tulare, it meets a mean Winter temperature of forty-eight degrees, which is higher than that of the mountains it has just passed. It therefore retains its moisture and passes on, until it meets a cold polar wind, and has another portion of its moisture condensed in a rainstorm, or, failing to meet this, passing still further north, until its moisture is condensed by the prevailing low temperature of a higher latitude. It is of frequent occurrence in Winter that a gentle southeast wind will blow for days, giving no rain south of the latitude of San Francisco, but cloudy weather at the northern end of the Sacramento Valley, and light showers and rains from Red Bluff to Oregon. Therefore, the northern part of the State should receive more rain than the southern, and the mountains more than the valleys. The least rain should be in the hot deserts and on those sides of valleys most sheltered by mountains from the moisture-bearing winds.

Meteorological observations, taken since the writing of the above, fully confirm the assertion made respecting the rainfall, however phenomenal it may appear to be, and show, conclusively, that the precipitation in all the territory tributary to the influence of the above factors of climate, is subservient to meteorological laws, the same as in other parts of the world, differing only as the physical causes differ that produce the resultant effects. The average annual rainfall at Crescent City, in the extreme northern part of the State of California, is thirty-six inches, and diminishes about two inches for every degree of latitude towards the south, until, at San Diego, it is but ten inches. In altitude, it is found to increase about one inch for every one hundred feet in elevation in ascending the windward side of the Sierra Nevada range of mountains. Local causes have influences bearing upon the amount of rainfall in different localities, but they are nearly all topographical; and, when carefully studied, are easily explained, either for the small or great amount of average rainfall they receive.

TRANSACTIONS

OF THE

FIRST DISTRICT AGRICULTURAL ASSOCIATION

For the Year 1884,

Composed of the Counties of San Francisco, Alameda, and Contra Costa.

OFFICERS OF THE ASSOCIATION.

A. C. DIETZ.....President.
L. WALKERSecretary.
OAKLAND BANK OF SAVINGS.....Treasurer.

DIRECTORS.

A. C. DIETZ.....Oakland, Alameda County.
JAMES ADAMS.....Oakland, Alameda County.
R. P. CLEMENTOakland, Alameda County.
C. N. CUSHINGOakland, Alameda County.
J. C. SMITHOakland, Alameda County.
THOMAS EWINGOakland, Alameda County.
JOHN B. WATSONOakland, Alameda County.
D. F. MAJORS.....Concord, Contra Costa County.

REPORT.

OAKLAND, December 31, 1884.

To the honorable the State Board of Agriculture:

GENTLEMEN: The Directors of the First District Agricultural Association submit this, their report of the transactions of said Association, for the year ending this date.

L. WALKER, Secretary.

RECEIPTS AND EXPENDITURES.

Receipts.

Received from sale of annual membership tickets.....	\$370 50	
Received from fines.....	5 00	
Received from sale of daily admission tickets.....	3,299 95	
Received from privileges.....	2,219 64	
Received from sweepstakes.....	76 00	
Received from State.....	2,000 00	
Cash on hand September 1, 1884.....	2,209 21	
		<u>\$10,180 30</u>

Expenditures.

By amount paid trotting purses.....	\$3,020 00	
By amount paid running purses.....	1,000 00	
By amount paid office expenses.....	268 80	
By amount paid advertising.....	1,146 24	
By amount paid park expenses.....	892 00	
By amount paid pacing purses.....	250 00	
By amount paid ladies' tournament.....	107 50	
By amount paid premiums.....	1,654 00	
By amount paid employés.....	884 75	
By amount paid National Trotting Association.....	106 00	
Balance, cash on hand.....	851 01	
		<u>\$10,180 30</u>

EXHIBITS AND PREMIUMS AWARDED—1884.

FIRST DEPARTMENT.

LIVE STOCK.	Name of Owner.	P. O. Address.	Name of Animal.	Award.
CLASS I—THOROUGHBRED HORSES.				
Best stallion, three years old and over.....	J. C. Simpson	Oakland	Sir Thad	\$30 00
Best thoroughbred mare, three years old	J. C. Simpson	Oakland	Lady Viva	\$20 00
CLASS II—FAMILIES OTHER THAN THOROUGHBRED.				
Best dam, with not less than two of her colts	B. Boorman	San Pablo	Julia and five colts	\$15 00
CLASS III—HORSES OF ALL WORK.				
Best stallion, three years old and over.....	W. H. Lee	Oakland	Henry Williamson	\$20 00
Second best.....	J. J. Fairbanks	Oakland	Sotoyonne	\$10 00
Stallion, three years old and over	B. Boorman	San Pablo	Young Spy	
Stallion, three years old and over	Irvin Ayers	Oakland	Alpheus	
Stallion, three years old and over	J. McM. Shafter	Olema	Prince of Marin	
Stallion, three years old and over	Isaac Jewell	Petaluma	Rawlin	
Best colt, under one year	B. Boorman	San Pablo	James G. Blaine	\$5 00
Best mare, three years old and over	Ben. E. Harris	San Francisco	Frankie Eaton	\$15 00
CLASS IV—ROADSTERS.				
Best stallion, four years old and over	H. A. Van Amringe	Oakland	Washington	\$25 00
Second best.....	Ben. E. Harris	San Francisco	Adventure	\$12 00
Stallion, four years old and over	J. H. Tennant	Pinole	Nutwood, Jr.	
Best stallion, three years old and over	J. H. Tennant	Pinole	Alert	\$20 00
Best stallion, two years old and over	C. H. Bowers	Oakland	Waterford	\$15 00
Second best.....	Sylvester Scott	Cloverdale	Ironclad, Jr.	\$8 00
Best yearling	Ben. E. Harris	San Francisco	Sir Whipple	\$10 00
Best suckling colt.....	Ben. E. Harris	San Francisco	Relief	\$5 00
Suckling colt.....	J. C. Simpson	Oakland	Anteo Viva	
Suckling colt.....	Charles Frank	Oakland	Abdallah Frank	

Best mare or gelding, four years old and over.	J. H. Tennant.	Pinole	Twinkle	-----	\$25 00
Second best.	Irvin Ayers	Oakland	Gus Wilkes	-----	\$12 00
Mare or gelding, four years old and over.	Ed. Younger	San José	Whisper	-----	
Mare or gelding, four years old and over.	J. H. Tennant	Pinole	Sobranie	-----	
Mare or gelding, four years old and over.	Charles Frank	Oakland	Trotty	-----	
Best mare or gelding, three years old	John Rogers	Martinez	Frank Madley	-----	\$10 00
Best mare or gelding, two years old	J. H. Tennant	Pinole	Pinole, Jr.	-----	\$5 00
Best span of roadsters, matched (two or more to compete), owned and used by one person	J. H. Tennant	Pinole	Parthena	-----	
Second best.	Dr. Cowper	Los Angeles	Draper and Roscoe	-----	\$25 00
Span of roadsters, matched, owned by one person	P. Pumyea	Oakland	Lew and Pete	-----	\$12 00
	S. A. Prentiss	Oakland	Dandy and Trusty	-----	
CLASS V—DRAFT HORSES.					
Best stallion, three years old and over	E. R. Charles	Petaluma	Pointman	-----	\$20 00
Second best.	B. Boorman	San Pablo	Gladiator	-----	\$10 00
Best stallion, two years old	Tim. Keegan	Oakland	Napoleon	-----	\$15 00
Best stallion, one year old	B. Boorman	San Pablo	Sir Julian	-----	\$10 00
Best mare, three years old and over	B. Boorman	San Pablo	Clara Bell	-----	\$15 00
CLASS VI—CARRIAGE HORSES.					
Best span of carriage horses	Ben. E. Harris	San Francisco	Colonel and Elmo	-----	\$20 00
Second best.	Moses Hopkins	San Francisco	Lucy and Mollie H.	-----	\$10 00
Saddle horse of either sex, five years old	Ben. E. Harris	San Francisco	Swindle	-----	
Best saddle horse of either sex, six years old	Ben. E. Harris	San Francisco	Leo	-----	\$10 00
Saddle horse of either sex, eight years old	Ben. E. Harris	San Francisco	Hector	-----	
Saddle horse of either sex, four years old	Ben. E. Harris	San Francisco	Rose Templeton	-----	
Saddle horse of either sex, eight years old	F. Lapham	Alameda	Daniel	-----	
Saddle horse of either sex, seven years old	F. Lapham	Alameda	Pedro	-----	
Second best saddle horse of either sex, six years old	F. Lapham	Alameda	Richard	-----	\$5 00
SWEEPSTAKES.					
Best stallion of any breed or age	L. J. Rose	Los Angeles	Sultan	-----	\$50 00
Second best stallion of any breed or age	Sabin Harris	Oakland	Orient	-----	\$20 00
Stallion of any breed or age	J. M. Learned	Stockton	Adrian	-----	
CLASS VII—JACKS.					
Best jack, two years old and over	Sylvester Scott	Cloverdale	Black Hawk	-----	\$20 00
Best jennet, two years old and over	Sylvester Scott	Cloverdale	Fannie	-----	\$10 00
CLASS I—DURHAM CATTLE.					
Best bull, three years old or over	Coleman Younger	San José	Forest King	-----	\$25 00
Second best bull, three years old or over	Sylvester Scott	Cloverdale	Mazourka's Royal Oxford	-----	\$10 00

FIRST DEPARTMENT--Continued.

LIVE STOCK.	Name of Owner.	P. O. Address.	Name of Animal.	Award.
Bull, three years old or over	R. P. Soxe.....	New Zealand	Duke of Albany
Best bull, two years old	Dr. A. Lillencrantz	Oakland	Spring\$20 00
Second best bull, two years old	Edward Younger	San José	Kirk Levington of Forest Ho.\$10 00
Best bull, one year old	Coleman Younger	San José	6th Forest King\$5 00
Bull, one year old	Edward Younger	San José	2d Kirk Levington Forest Ho.
Bull, one year old	Edward Younger	San José	3d Kirk Levington Forest Ho.
Bull, one year old	Sylvester Scott	Cloverdale	3th Kirk Levington Forest Ho.
Best cow, three years old or over	Coleman Younger	San José	Duke of Oxford\$20 00
Cow, three years old or over	Coleman Younger	San José	2d Nevada Belle
Cow, three years old or over	Coleman Younger	San José	2d Rose of Forest Home.
Second best cow, three years old or over	Sylvester Scott	Cloverdale	Jessie Maynard
Cow, three years old or over	Sylvester Scott	Cloverdale	Alice Gray\$10 00
Cow, three years old or over	Edward Younger	San José	Lady Maynard
Cow, three years old or over	Edward Younger	San José	Gen
Best cow, two years old or over	Coleman Younger	San José	2d Red Dolly
Second best cow, two years old or over	Edward Younger	San José	3d Oxford Rose\$15 00
Cow, two years old or over	Edward Younger	San José	14th Red Dolly\$10 00
Best cow, one year old	Edward Younger	San José	10th Rose of Forest Home.
Cow, one year old	Sylvester Scott	Cloverdale	13th Red Dolly\$10 00
Cow, one year old	Coleman Younger	San José	Lady Oxford
Cow, one year old	Coleman Younger	San José	12th Rose of Forest Home.
Cow, one year old	Coleman Younger	San José	14th Rose of Forest Home.
Cow, one year old	Coleman Younger	San José	15th Red Dolly
Cow, one year old	Sylvester Scott	Cloverdale	4th Oxford Rose
Best heifer calf, under one year old	Coleman Younger	San José	Ellen\$5 00
Heifer calf, under one year old	Coleman Younger	San José	7th Sprightly
Heifer calf, under one year old	Coleman Younger	San José	17th Rose of Forest Home.
Heifer calf, under one year old	Sylvester Scott	Cloverdale	2d Forest Rose
Heifer calf, under one year old	Sylvester Scott	Cloverdale	Belle of Oxford
Heifer calf, under one year old	Sylvester Scott	Cloverdale	Oxford Belle
Heifer calf, under one year old	Sylvester Scott	Cloverdale	Alice
CLASS II--AYESHIRE.				
Best bull, three years old and over	George Bement	Redwood City	Archie\$25 00
Second best bull, three years old and over	George Bement	Redwood City	Melanchton\$10 00
Best bull, two years old	George Bement	Redwood City	Hector\$20 00
Best bull, one year old	George Bement	Redwood City	San Mateo\$10 00
Best calf, under one year old	George Bement	Redwood City	Clipper\$5 00

Best cow, three years old and over.....	George Bement.....	Redwood City.....	Highland Mary.....	\$20 00
Second best cow, three years old and over.....	George Bement.....	Redwood City.....	Lady Faxon.....	\$10 00
Cow, three years old and over.....	George Bement.....	Redwood City.....	Elaene.....
Cow, three years old and over.....	George Bement.....	Redwood City.....	Nydia 2d.....
Best bull, one year old.....	George Bement.....	Redwood City.....	Sybil.....	\$15 00
Best cow, one year old.....	George Bement.....	Redwood City.....	Marian.....	\$10 00
Best heifer calf, under one year.....	George Bement.....	Redwood City.....	Sybilie.....	\$5 00
CLASS III—JERSEY OR ALDERNEY, AND GUERNSEY.				
Best bull, three years old and over.....	W. D. Bliss.....	Petaluma.....	William of Scituate (Jersey).....	\$25 00
Best bull, two years old.....	Thomas Ward.....	Oakland.....	William (Jersey).....	\$20 00
Second best bull, two years old.....	Jas. M. McCue.....	Marin County.....	La Hiras Boy.....	\$10 00
Bull, two years old.....	C. L. Dietz.....	Oakland.....	Old Oakland (Jersey).....
Best bull, one year old.....	F. Delger.....	Oakland.....	Bismarck (Jersey).....	\$10 00
Second best bull, one year old.....	A. Martin.....	Oakland.....	John S (Jersey).....	\$5 00
Bull, one year old.....	Wm. Arps.....	Oakland.....	Modoc (Jersey).....
Best bull calf, under one year.....	Thomas Ward.....	Oakland.....	Oakland Chief (Jersey).....	\$5 00
Second best bull calf, under one year.....	Thomas Ward.....	Oakland.....	General Woickham (Jersey).....
Best cow, three years old and over.....	Thomas Ward.....	Oakland.....	Bonita (Jersey).....	\$20 00
Second best cow, three years old and over.....	A. Martin.....	Oakland.....	Flora 4th (Jersey).....	\$10 00
Cow, three years old and over.....	Thomas Ward.....	Oakland.....	Lady Woickham (Jersey).....
Cow, three years old and over.....	F. Delger.....	Oakland.....	Lady Jane (Jersey).....
Best cow, two years old.....	Thomas Ward.....	Oakland.....	Oakland Queen.....	\$15 00
Cow, two years old.....	F. Delger.....	Oakland.....	Corday.....	\$10 00
Cow, two years old.....	Thomas Ward.....	Oakland.....	Lucy 2d.....
Best cow, one year old.....	Thomas Ward.....	Oakland.....	Lizzie.....
Best heifer calf, under one year.....	Thomas Ward.....	Oakland.....	Lady Wilson (Jersey).....	\$10 00
Heifer calf, under one year.....	Thomas Ward.....	Oakland.....	Jennie (Jersey).....
Heifer calf, under one year.....	Thomas Ward.....	Oakland.....	Bonita 2d (Jersey).....	\$5 00
Heifer calf, under one year.....	Thomas Ward.....	Oakland.....	Lady Ward.....
Heifer calf, under one year.....	Thomas Ward.....	Oakland.....	Maud.....
CLASS IV—DEVONS, HEREFORDS, HOLSTEINS, AND HOLDER- NESS (IN ONE CLASS).				
Best Hereford bull, one year old.....	Wm. Kohl.....	San Mateo.....	Count Tredegar.....	\$10 00
Hereford bull, one year old.....	Wm. Kohl.....	San Mateo.....	Vanguard.....
Hereford bull, one year old.....	R. P. Saxe.....	New Zealand.....	Horace 22d.....
Hereford bull, one year old.....	R. P. Saxe.....	New Zealand.....	Horace 26th.....
Hereford bull, one year old.....	R. P. Saxe.....	New Zealand.....	George 7th.....
Best Hereford bull calf, under one year.....	Wm. Kohl.....	San Mateo.....	Duke of Normandy.....	\$5 00
Best Hereford cow, three years old and over.....	Wm. Kohl.....	San Mateo.....	Violetta 2d.....	\$20 00
Second best Hereford cow, three years old and over.....	Wm. Kohl.....	San Mateo.....	Tidy 10th.....	\$10 00
Best Hereford cow, two years old.....	Wm. Kohl.....	San Mateo.....	Tempress 1st.....	\$15 00

FIRST DEPARTMENT—Continued.

Live Stock.	Name of Owner.	P. O. Address.	Name of Animal.	Award.
Second best Hereford cow, two years old	Wm. Kohl	San Mateo	Triumph Thena	\$10 00
Hereford cow, two years old	Wm. Kohl	San Mateo	Violeta 3d	\$5 00
Best Hereford heifer calf, under one year	Wm. Kohl	San Mateo	Mary 3d	
Hereford heifer calf, under one year	Wm. Kohl	San Mateo	Kate 1st	
Hereford heifer calf, under one year	Wm. Kohl	San Mateo	Queen of the Pacific	
Best Holstein bull, three years old and over	Mrs. E. D. Knott	La Honda	Anson	\$25 00
Best Holstein bull, one year old	H. W. Meek	San Lorenzo	Juror	\$10 00
Best Holstein bull calf, under one year old	Mrs. E. D. Knott	La Honda	Butler	\$5 00
Holstein bull calf, under one year old	Mrs. E. D. Knott	La Honda	Blaine	
Holstein bull calf, under one year old	Mrs. E. D. Knott	La Honda	Logan	
Holstein bull calf, under one year old	H. W. Meek	San Lorenzo	Brutus	
Holstein cow, two years old	H. W. Meek	San Lorenzo	Cassius	
Second best Holstein cow, two years old	H. W. Meek	San Lorenzo	Lady Bertha	\$15 00
Holstein cow, two years old	H. W. Meek	San Lorenzo	Syracuse Maid	\$10 00
Holstein cow, two years old	H. W. Meek	San Lorenzo	Aggie Millie	
Holstein cow, two years old	H. W. Meek	San Lorenzo	Aggie Lizzie	
Holstein cow, two years old	H. W. Meek	San Lorenzo	Rigoletto	
Best Holstein heifer calf, under one year old	H. W. Meek	San Lorenzo	Alameda Maid	\$5 00
SWEEPSTAKES. CLASS 1—DURHAMS, HOLSTEINS, HOLDERNESS, HEREFORDS, AND DEVONS.				
Best bull	Coleman Younger	San José	Forest King (Durham)	\$40 00
Second best bull	Sylvester Scott	Cloverdale	Mazurka's Royal Oxford (Dur.)	\$20 00
Bull	Ed. Younger	San José	Kirke Levington of Forest H. (Durham)	
Bull	R. P. Saxe	New Zealand	Duke of Albany (Durham)	
Bull	Wm. Kohl	San Mateo	Count Tredegar (Hereford)	
Bull	R. P. Saxe	New Zealand	Horace 26th (Hereford)	
Bull	Paige & Johnston	Los Angeles	Fred Douglass (Polled Angus)	
Best cow	Coleman Younger	San José	Jessie Maynard (Durham)	\$30 00
Second best cow	Coleman Younger	San José	Nevada Belle (Durham)	\$15 00
Cow	Wm. Kohl	San Mateo	Temptress 1st	
Cow	Wm. Kohl	San Mateo	Triumph Thena	
Cow	Paige & Johnston	Los Angeles	Miss Fyfe (Polled Angus)	
Cow	Paige & Johnston	Los Angeles	Young Favorite (Pol'd Angus)	

CLASS II—AYRSHIRES, JERSEYS OR ALDERNEYS, AND GUERNSEYS.			
Best bull.....	George Bement.....	Redwood City.....	Archie (Ayrshire).....
Second best bull.....	W. D. Bliss.....	Petaluma.....	William of Scituate (Jersey).....
Bull.....	George Bement.....	Redwood City.....	Melanchton (Ayrshire).....
Best cow.....	Jas. M. McCue.....	Marin County.....	La Hiras Boy (Jersey).....
Second best cow.....	Thomas Ward.....	Oakland.....	Bonita (Jersey).....
Cow.....	George Bement.....	Redwood City.....	Elaire (Ayrshire).....
Cow.....	A. Martin.....	Oakland.....	Flora 4th (Jersey).....
Cow.....	George Bement.....	Redwood City.....	Lady Faxon (Ayrshire).....
Cow.....	Thomas Ward.....	Oakland.....	Oakland Queen (Jersey).....
SPECIAL CLASS.			
Best exhibit of herd of Polled Angus cattle.....	Paige & Johnston.....	Los Angeles.....	Silver cup worth \$75 00
HERDS.			
Best herd of thoroughbred Durham cattle, over two years old, to consist of one male and four females, owned by one person.....	Coleman Younger.....	San José.....	Bull, Forest King; and four cows, Nevada Belle, 2d Rose of Forest Home, Jessie Maynard, and 14th Red Dolly.....
Herd of thoroughbred Durham cattle, over two years old, to consist of one male and four females, owned by one person.....	Ed. Younger.....	San José.....	Bull, Kirke Levington of Forest Home; and four cows, Red Dolly 2d, 3d Oxford Rose, 13th Red Dolly, and 10th Rose of Forest Home.....
Herd of thoroughbred Durham cattle, under two years old, to consist of one male and four females, owned by one person.....	Coleman Younger.....	San José.....	Bull, 6th Forest King; and four cows, 4th Oxford Rose, 12th Rose of Forest Home, Red Dolly 15th, and 14th Rose of Forest Home.....
Best herd of thoroughbred Jersey or Alderney cattle, over two years old, to consist of one male and four females, owned by one person.....	Thomas Ward.....	Oakland.....	Jersey bull, William; and four cows, Oakland Queen, Lucy 2d, Bonita, and Lady Woickham.....
Herd of thoroughbred Jersey or Alderney cattle, under two years old, to consist of one male and four females, owned by one person.....	Thomas Ward.....	Oakland.....	Bull, Oakland Chief; and four cows, Maud, Lady Wilson, Jennie 1st, and Bonita 2d.....
Best herd of Ayrshire cattle, of any age, to consist of one male and four females owned by one person.....	George Bement.....	Redwood City.....	Bull, Archie; and four cows, Elaine, Nydia 2d, Lady Faxon, and Highland Mary.....

FIRST DEPARTMENT—Continued.

Live Stock.	Name of Owner.	P. O. Address.	Name of Animal.	Award.
Best herd of thoroughbred Hereford, Holstein, or Holder- ness cattle, of any age, to consist of one male and four females, owned by one person.....	H. W. Meek.....	San Lorenzo.....	Holstein bull, Juror; and four cows, Lady Bertha, Aggie Lizzie, Aggie Millie, and Rigoletto.....\$20 00
Competing herd of Herefords of great excellence.....	William Kohl.....	San Mateo.....	Bull, Count Trediger; and four cows, Violetta 2d, Tempress 1st, Triumph Thena, and Vallette 3d.....\$20 00
CLASS V—GRADED CATTLE—COWS.	Coleman Younger..... Thomas Ward.....	San José..... Oakland.....	Widow..... Devon.....\$20 00\$15 00
CLASS VII—SHEEP. <i>Silesian, Cotswold, Leicestershire, Lincolnshire, or Southdown,</i> <i>in one class.</i>	George Bement.....	Redwood City.....	Sonoma.....
Southdown ram..... Best pen of Southdown ewes, not less than five, one year old and upward..... Cotswold ram and pen of Cotswold ewes.....	George Bement..... Coleman Younger.....	Redwood City..... San José.....	Early Morn.....\$7 50\$10 00
SWEEPSHAKES—SHEEP.	Edward Younger..... George Bement.....	San José..... Redwood City.....	Early Morn..... Sonoma.....\$20 00\$20 00
CLASS VIII—SWINE. <i>Essex and Berkshire in one class.</i>	Tyler Beach..... Tyler Beach..... B. D. Boswell..... B. D. Boswell..... P. L. Earhart..... P. L. Earhart.....	San José..... San José..... Ocean View..... Ocean View..... Oakland..... Oakland.....	Tarbox..... Blonde..... Sallie.....\$10 00\$10 00\$10 00
CLASS IX—POULTRY.	Thomas Ward..... Thomas Ward.....	Oakland..... Oakland.....	Trio..... Trio.....\$2 50\$2 50

Light Brahmas	P. L. Earhart	Oakland	Trio	\$2 50
Claybournes	F. E. Fairbanks	Oakland	Trio	\$2 50
Langshans	W. B. Hubbard	Oakland	Trio	\$2 50
Black African Bantams	Nellie Deitz	Oakland	Trio	\$2 50
Malay Game	Nellie Deitz	Oakland	Trio	\$2 50
Black-breasted Game	Nellie Deitz	Oakland	Trio	\$2 50

SPEED PROGRAMME.

MONDAY, SEPTEMBER 1, 1884.

RACE No. 1—RUNNING.

For two-year olds. Purse, five hundred dollars. Three-quarter mile dash. First horse to receive two hundred and fifty dollars; second horse, one hundred and twenty-five dollars; third horse, seventy-five dollars; fourth horse, fifty dollars.

Name and Pedigree of Horse.	By Whom Entered.	P. O. Address.
Cito, by Joe Hooker; dam, Too Soon-----	J. C. Simpson-----	----- Oakland.
No Name, by Thad Stevens; dam, Gypsy-----	William Boots-----	----- Milpitas.
Estill, by Norfolk; dam, Lady Jane-----	W. M. Murray-----	----- Sacramento.
Mischief, by Thad Stevens; dam, Katie Pease-----	James Mee-----	----- San Francisco.
Mamie D, by Wheatley; dam, by Lodi-----	G. Pacheco-----	----- Santa Rosa.

<i>Position at Starting.</i>	<i>Position at Close.</i>
1. Mischief-----	Estill----- 1
2. Cito-----	Cito----- 2
3. No Name-----	Mischief----- 3
4. Estill-----	No Name----- 4

Time—1:17.

RACE No. 2—RUNNING.

Free for all. Pardee purse, five hundred dollars. One mile and repeat. First horse to receive two hundred and fifty dollars; second horse, one hundred and twenty-five dollars; third horse, seventy-five dollars; fourth horse, fifty dollars.

Name and Pedigree of Horse.	By Whom Entered.	P. O. Address.
Jou Jou, by Monday; dam, Plaything-----	W. Kelley-----	----- San Francisco.
Forest King, by Monday; dam, Abbie W-----	S. J. Jones-----	----- Portland.

<i>Position at Starting.</i>	<i>Position at Close.</i>
1. Forest King-----	Forest King----- 1 1
2. Jou Jou-----	Jou Jou----- 2 2

Time—1:44½; 1:47½.

RACE NO. 3—TROTTING.

For all horses that have never beaten 2:22. Purse, eight hundred dollars. Mile heats, best three in five, to harness. First horse to receive four hundred dollars; second horse, two hundred dollars; third horse, one hundred and twenty dollars; fourth horse, eighty dollars.

Name and Pedigree of Horse.	By Whom Entered.	P. O. Address.
Albert W, by Electioneer; dam, by John Nelson	A. Waldstein	San Francisco.
Arab, by Arthurton; dam, Lady Hamilton	E. M. Fry	San Francisco.
Allen Roy, by Patchen Vernon; dam, unknown	J. W. Donathan	San Francisco.
Manon, by Nutwood; dam, Abbie	J. A. Goldsmith	San Francisco.
Vanderlynn, by George M. Patchen, Jr.; dam, a Joseph mare	Pat. Farrell	San Francisco.

Position at Starting.	Position at Close.			
1. Manon	Manon	1	1	1
2. Vanderlynn	Albert W	3	2	2
3. Albert W	Vanderlynn	2	3	3

Time—2:24½; 2:24; 2:22.

TUESDAY, SEPTEMBER 2, 1884.

RACE NO. 4—TROTTING.

For all four-year olds and under. Purse, six hundred dollars. Mile heats, best three in five, to harness. First horse to receive three hundred dollars; second horse, one hundred and fifty dollars; third horse, ninety dollars; fourth horse, sixty dollars.

Name and Pedigree of Horse.	By Whom Entered.	P. O. Address.
Regina, by Electioneer	J. A. Goldsmith	San Francisco.
Center, by Sultan; dam, Bellevue Maid	H. McGregor	San Francisco.
Neluska, by Sultan; dam, Gretchen	L. J. Rose	San Gabriel.
Thapsin, by Berlin; dam, Lady Hubbard	W. F. Smith	Sacramento.

Position at Starting.	Position at Close.			
1. Neluska	Thapsin	1	1	1
2. Thapsin	Regina	3	2	2
3. Regina	Neluska	2	3	dis.

Time—2:31½; 2:31½; 2:29.

RACE NO. 5—TROTTING.

For all horses that have never beaten three minutes. Purse, six hundred dollars. First horse to receive three hundred dollars; second horse, one hundred and fifty dollars; third horse, ninety dollars; fourth horse, sixty dollars.

Name and Pedigree of Horse.	By Whom Entered.	P. O. Address.
Joe Arthurton, by Arthurton	J. A. Goldsmith	San Francisco.
Rob Roy, by General Benton; dam, Nettie	E. M. Fry	San Francisco.
Le Grange, by Sultan; dam, Georgiana	L. J. Rose	San Gabriel.
Blanche, by General McClellan; dam, by John Nelson	William Bihler	Petaluma.

Position at Starting.	Position at Close.					
1. Joe Arthurton	Joe Arthurton	2	3	1	1	1
2. Blanche	Le Grange	1	1	3	3	3
3. Le Grange	Blanche	3	2	2	2	2

Time—2:26½; 2:28; 2:29½; 2:34½; 2:30½.

WEDNESDAY, SEPTEMBER 3, 1884.

RACE NO. 6—RUNNING.

Free for all. Purse, five hundred dollars. Two-mile dash. First horse to receive three hundred dollars; second horse, one hundred and fifty dollars; third horse, fifty dollars.

Name and Pedigree of Horse.	By Whom Entered.	P. O. Address.
Padre, by Thad Stevens; dam, Gypsy	William Boots	Milpitas.
Birdcatcher, by Spectre; dam, by Young Melbourne	C. Dorsey	Sacramento.
Jocko, by Cariboo; dam, Reply	M. M. Allen	San Francisco.
Garfield, by Langford; dam, by Lodi	G. Pacheco	Santa Rosa.
Balboa, by Norfolk; dam, Maggie Dale	Charles H. Thomas	San Diego.

Position at Starting.	Position at Close.
1. Padre	Birdcatcher 1
2. Jocko	Jocko 2
3. Balboa	Garfield 3
4. Birdcatcher	Balboa 4
5. Garfield	Padre 5

Time—3:38½.

RACE NO. 7—RUNNING.

Open to all. Purse, five hundred dollars. Three-quarter mile and repeat. First horse to receive three hundred dollars; second horse, one hundred and fifty dollars; third horse, fifty dollars.

Name and Pedigree of Horse.	By Whom Entered.	P. O. Address.
Stanislaus, by Imp. Partisan; dam, mother of Modoc	William Murray	Sacramento.
Forest King, by Monday; dam, Abbie W.	S. J. Jones	Portland.
Aunt Betsy, by Hardwood; dam, Peggy Ringgold	James Adams	Los Angeles.

Position at Starting.	Position at Close.
1. Forest King	Forest King 1 1
2. Stanislaus	Stanislaus 2 2
3. Aunt Betsy	Aunt Betsy 3 3

Time—1:16½; 1:17½.

RACE NO. 8—TROTTING.

For all horses that have never beaten 2:30. Purse, eight hundred dollars.

Name and Pedigree of Horse.	By Whom Entered.	P. O. Address.
Marin, by Quinn's Patchen	Pat. Farrell	San Francisco.
Olivette, by Whipple's Hambletonian	A. C. Dietz	Oakland.
Anteo, by Electioneer; dam, Columbine	I. De Turk	Santa Rosa.
Rarus, Jr.; unknown	Armstrong & Carrington	Salt Lake.
Adrian, by Reliance; dam, Adriana	James M. Learned	Stockton.
Johnny, by Auctioneer Johnny	William Bourke	Petaluma.
Adair, by Electioneer; dam, Addie Lee	W. F. Smith	Sacramento.

RACE No. 8—Continued.

<i>Position at Starting.</i>	<i>Position at Close.</i>			
1. Olivette	Adair	1	1	1
2. Adrian	Olivette	3	3	2
3. Anteo	Adrian	2	4	3
4. Adair	Anteo	4	2	4

Time—2:29; 2:26; 2:27½.

THURSDAY, SEPTEMBER 4, 1884.

RACE No. 9—TROTTING.

For all three-year olds and under. Purse, six hundred dollars. Mile heats, best three in five. First horse to receive three hundred dollars; second horse, one hundred and fifty dollars; third horse, ninety dollars; fourth horse, sixty dollars.

Name and Pedigree of Horse	By Whom Entered.	P. O. Address.
Robert Lee, by Nutwood	Rancho del Paso	San Francisco.
Pope Leo, by Romeo; dam, by Crichton	Charles H. Thomas	San Diego.
Antevolo, by Electioneer; dam, Columbine	J. C. Simpson	Oakland.
Peyton, by Electioneer; dam, Miss Peyton	G. W. James	Sacramento.
Voucher, by Nephew; dam, by Vernon Patchen	G. W. Trahern	Stockton.
Nona Y, by Admiral; dam, Flora	A. A. Yeager	Suisun.
Kismet, by Sultan; dam, Saucebox	L. J. Rose	San Gabriel.

<i>Position at Starting.</i>	<i>Position at Close.</i>			
1. Robert Lee	Kismet	1	1	1
2. Kismet	Voucher	2	2	3
3. Pope Leo	Robert Lee	4	4	2
4. Voucher	Pope Leo	3	3	4

Time—2:36; 2:38½; 2:36½.

RACE No. 10—TROTTING.

For yearlings. Purse, two hundred and fifty dollars. Mile dash in harness. First horse to receive one hundred and fifty dollars; second horse, seventy-five dollars; third horse, twenty-five dollars.

Name and Pedigree of Horse.	By Whom Entered.	P. O. Address.
Bonanza, by Artherton; dam, by John Nelson	A. Waldstein	San Francisco.
Senator, by Echo; dam, by Young Morrill	Rancho del Paso	Sacramento.
No Name, by Sultan; dam, by George Wilkes	L. J. Rose	San Gabriel.
Trovato, by Sterling; dam, Flaxtail	C. F. Taylor	Sacramento.
Transit, by Prompter; dam, Venus	M. Toomey	Sacramento.
Daphne, by Buccaneer; dam, Alma	A. C. Dietz	Oakland.

<i>Position at Starting.</i>	<i>Position at Close.</i>			
1. Bonanza	Transit	1		
2. Trovato	Senator	2		
3. Senator	Trovato	3		
4. No Name	Daphne	4		
5. Daphne	Bonanza	5		
6. Transit	No Name	drawn.		

Time—3:00½.

TRANSACTIONS OF THE

RACE No. 11—PACING.

For all pacers (Corretto to wagon). Purse, five hundred dollars. Mile heats, best three in five. First horse to receive two hundred and fifty dollars; second horse, one hundred and twenty-five dollars; third horse, seventy-five dollars; fourth horse, fifty dollars.

Name and Pedigree of Horse.	By Whom Entered.	P. O. Address.
Nevada, by General Reno; dam, Maysville Queen.	W. B. Todhunter	San Francisco.
Johnny Wiegler; pedigree unknown.	John Hicks	San Francisco.
Maud, by Bertrand Black Hawk; dam, by Hambletonian Chief	H. J. Agnew	San Francisco.
Sam Louis, by Echo	Frank Simpson	Oakland.

Position at Starting.	Position at Close.
1. Sam Louis	Maud
2. Maud	Johnny Wiegler
3. Johnny Wiegler	Nevada
4. Nevada	Sam Louis

Time—2:27½; 2:26½; 2:31.

FRIDAY, SEPTEMBER 5, 1884.

RACE No. 12—TROTTING.

For all horses that have never beaten 2:35. Purse, eight hundred dollars. Mile heats, best three in five, to harness. First horse to receive four hundred dollars; second horse, two hundred dollars; third horse, one hundred and twenty dollars; fourth horse, eighty dollars.

Name and Pedigree of Horse.	By Whom Entered.	P. O. Address.
Guy Wilkes, by George Wilkes; dam, by Mambrino Patchen	J. A. Goldsmith	San Francisco.
James H; pedigree unknown.	George W. Bayliss	San Francisco.
Olivette, by Whipple's Hambletonian; dam, Belle.	A. C. Dietz	Oakland.
Kitty Almont, by Tilton Almont; dam, Gracie	James Corcoran	San Francisco.
Rarus, Jr.; pedigree unknown	Armstrong & Carrington	Salt Lake.
Colonel Hawkins; pedigree unknown	J. D. Young	Sacramento.

Position at Starting.	Position at Close.
1. Colonel Hawkins	Guy Wilkes
2. Olivette	Olivette
3. Guy Wilkes	Colonel Hawkins

Time—2:24; 2:25½; 2:26½.

RACE No. 13—TROTTING.

For all two-year olds. Purse, four hundred dollars. Mile heats, best two in three, in harness. First horse to receive two hundred dollars; second horse, one hundred dollars; third horse, sixty dollars; fourth horse, forty dollars.

Name and Pedigree of Horse.	By Whom Entered.	P. O. Address.
Lohengrin, by Echo; dam, by George M. Patchen.	Rancho del Paso	Sacramento.
Stamboul, by Sultan; dam, by Hambletonian	L. J. Rose	San Gabriel.

Position at Starting.	Position at Close.
1. Stamboul	Lohengrin
2. Lohengrin	Stamboul

Time—2:41; 2:40.

FIRST DISTRICT AGRICULTURAL ASSOCIATION.

275

RACE No. 14—TROTTING.

For all horses that have never beaten 2:26. Purse, eight hundred dollars. Mile heats, best three in five, to harness. First horse to receive four hundred dollars; second horse, two hundred dollars; third horse, one hundred and twenty dollars; fourth horse, eighty dollars.

Name and Pedigree of Horse.	By Whom Entered.	P. O. Address.
Sister, by Admiral	J. A. Goldsmith	San Francisco.
Tump Winston, by Primus; dam, Lady Don	E. Downer	San Francisco.
Scandinavian, by Black Hawk-Morgan	Peter Johnson	San Francisco.
B B, by Bellfounder; dam, unknown	J. W. Donathan	San Francisco.

Position at Starting.	Position at Close.
1. B B	Sister
2. Sister	B B
3. Tump Winston	Tump Winston
4. Scandinavian	Scandinavian

Time—2:23; 2:26½; 2:22½; 2:25.

SATURDAY, SEPTEMBER 6, 1884.

RACE No. 17—TROTTING.

Open to all (Director barred and Willie R to wagon). Purse, one thousand dollars. Mile heats, best three in five. First horse to receive five hundred dollars; second horse, two hundred and fifty dollars; third horse, one hundred and fifty dollars; fourth horse, one hundred dollars.

Name and Pedigree of Horse.	By Whom Entered.	P. O. Address.
Brigadier, by Happy Medium; dam, Lady Turner	J. B. McDonald	Marysville.
Albert W, by Electioneer; dam, by John Nelson	A. Waldstein	San Francisco.
Manon, by Nutwood; dam, Abbie	J. A. Goldsmith	San Francisco.
Vanderlynn, by George M. Patchen; dam, Joseph mare	Pat. Farrell	San Francisco.

Position at Starting.	Position at Close.
1. Vanderlynn	Manon
2. Manon	Brigadier
3. Brigadier	Vanderlynn
4. Albert W	Albert W

Time—2:22; 2:24½; 2:22½.

RACE No. 18—TROTTING.

Special for named horses. Purse, five hundred dollars. Mile heats, best three in five, to harness. First horse to receive two hundred and fifty dollars; second horse, one hundred and twenty-five dollars; third horse, seventy-five dollars; fourth horse, fifty dollars.

Name and Pedigree of Horse.	By Whom Entered.	P. O. Address.
Oscar, by General McClellan	Parker	San Francisco.
Sorrel Ben, by Stockbridge Chief	Tom Beggs	Petaluma.
Nighttime, by Rustic; dam, Patchen mare	Lee Shaner	San Francisco.
Cleveland, by General McClellan	Clausen	San Francisco.
Twinkle, by Echo	J. H. Tennant	Pinole.
Volkin, by Bull Pup	Creely	San Francisco.

RACE No. 18—Continued.

<i>Position at Starting.</i>		<i>Position at Close.</i>	
1. Twinkle		Twinkle	2 1 0 1 1
2. Oscar		Cleveland	1 2 0 2 3
3. Volkin		Nighttime	3 3 4 4 2
4. Sorrel Ben		Sorrel Ben	4 4 3 3 4
5. Nighttime		Volkin	5 6 dis.
6. Cleveland		Oscar	6 5 dis.

Time—2:32½; 2:36; 2:33; 2:38½; 2:36½.

TRANSACTIONS
OF THE
SECOND DISTRICT AGRICULTURAL ASSOCIATION

For the Year ending December 8, 1884,

Composed of the Counties of San Joaquin, Calaveras, Tuolumne, Stanislaus,
Merced, Mariposa, Fresno, Tulare, and Kern.

OFFICERS OF THE ASSOCIATION FOR 1885.

L. U. SHIPPEE.....President.
J. M. LARUE.....Secretary.
A. W. SIMPSONTreasurer.

DIRECTORS.

FRED. ARNOLD.....Stockton.
JAMES A. LOUETTIT.....Stockton.
JOHN E. MOORE.....Stockton.
JOHN H. O'BRIEN.....Stockton.
R. W. RUSSELL.....Stockton.
R. C. SARGENT.....Woodbridge.
JAMES A. SHEPHERD.....Lathrop.
L. U. SHIPPEE.....Stockton.

CORRESPONDING MEMBERS FOR 1884.

CALAVERAS COUNTY.—T. J. Matteson, of Murphys; H. A. Messenger, of Campo Seco.
STANISLAUS COUNTY.—F. H. Ross, of Modesto; A. Beith, of Oakdale.
MARIPOSA COUNTY.—Daniel Wagner, of Coulterville; G. G. Goucher, of Mariposa.
MERCED COUNTY.—J. W. Bost, of Merced; J. J. Stevinson, of Hill's Ferry.
FRESNO COUNTY.—A. B. Butler, of Fresno; H. C. Daulton, of Berenda.
TULARE COUNTY.—E. Giddings, of Tulare; E. Jacobs, of Visalia.
TUOLUMNE COUNTY.—W. G. Long, of Sonora; R. M. Lampson, of Chinese Camp.
KERN COUNTY.—Sol. Jewett, George F. Thornton, of Bakersfield.

REPORT.

STOCKTON, CAL., December 8, 1884.

To the honorable the State Board of Agriculture:

GENTLEMEN: The Directors of the Second District Agricultural Association submit this, their report of the transactions of said association, for the year ending this date.

J. M. LARUE, Secretary.

RECEIPTS AND EXPENDITURES.

Receipts.

Balance December 3, 1883.....	\$1,011 50
Received from rents, storage, etc., and sale of hay and grain.....	632 41
Received from sale of single and grand stand tickets.....	4,360 00
Received from sales of privileges.....	5,054 55
Received from premium fees, discounts, etc.....	229 45

Received from sale of life membership.....	50 00
Received from bills payable.....	1,700 65
Received from State Controller's warrant.....	1,500 00
Received donation from M. M. Estee.....	20 00
Received donation from L. U. Shippee.....	120 00
Received donation from Stockton Combined Harvester and Agricultural Works	250 00
	<u>\$23,028 56</u>

Expenditures.

Paid indebtedness of 1883.....	\$519 12
Paid premiums of 1884, to date.....	1,928 30
Paid general expenses of 1884, including three years' insurance, etc.....	4,514 85
Paid for permanent improvements and personal property	6,138 29
Paid purses of 1884.....	9,808 00
Entrance fees refunded.....	120 00
	<u>\$23,028 56</u>

THE ANNUAL ADDRESS.

BY HON. MORRIS M. ESTEE.

MR. PRESIDENT, LADIES AND GENTLEMEN: I know it will be rather dull to listen to the subject upon which I will address you, after being at the races at the Fair this afternoon. What I intend to say to-night is an appeal to your reason. We are here to compare products, and by a generous rivalry to show who can produce the most in quantity and the best in quality. A spirit of rivalry is an incentive to good farming; any farming that is not intelligent is not successful, and will not pay. The common idea that any man can make a good farmer is not correct; it is a fallacy to say there is nothing to learn in farming; that our fathers knew it all, and that we know no more than they. The real truth is, farming is a progressive business; the man who does not progress in it is a failure. There is something the matter where a farmer is afraid to go to fairs and show what he raises and tell how he does it. There are no secrets in farming that cannot be learned by any intelligent man, but it requires a very intelligent man to know the whole business. In this respect there is nothing like comparisons from a colt up to a baby. Everything has some good points and some instructive points. You may be certain that a man never shows what he does not take pride in; he must fairly love the full, plump kernels of wheat he raises, the heifer or the colt or the pig he exhibits. Why, the man who does not love a good horse don't think much of his wife and children. When I see a farmer walking deliberately around his horse and then stop and look at him, I expect the next instant to see him pick up the little one that is clinging to his legs and toss it up, saying, "This is mine, too." An honest pride in what one creates is the strongest incentive to create the best. There should be pleasure in what we have and an ambition in what we do. Farming is not a dull business if the farmer tries to make it a lively business. You must love to be a farmer, or else do something that you do like; you must raise something that will stay with you like good horses or good cattle. I think it is creditable for one farmer to believe that he has little better horses or little better cattle than his neighbor has, for if your horse has not speed he may have strength and beauty; if he has not strength and beauty he may have a good disposition; if he has neither, of course you don't want him, and to find out these qualities all you have to do is to go to the Fair.

PROGRESS IN FARMING.

I was speaking of the necessity of progress in farming; by progress I mean that every day we should learn something that we did not know before, and, if possible, do something that we had not done before. It is said that the man who makes two blades of grass grow

where only one grew before is greater than a conqueror. He has certainly done something that is of advantage to the human race. Our fathers were good, industrious people, but a farmer of one hundred years ago would think he was on another planet if he could come back and see our present system of farming. What would one of the patriots of 1776 have thought on seeing the header, or mower, or reaper, or thrashing machine, or the combined header and thrasher of this State? He simply would not have known what the instrument was; he would have taken it for an engine of destruction. It is estimated that one man can now do just about four times the amount of farming that a man could do one hundred years ago, and do it much easier, and a great deal better. No country in the world has better farming machinery than California, and very few if any countries have as good. This is not boasting; it is simply the truth. We don't say our people are more intelligent than other peoples, but there is no question that in the department of agricultural machinery we have more and better appliances than any other people. Although it has hardly been twenty-five years since we commenced to farm generally throughout the State, and it has only been about twelve to fifteen years since we commenced grape raising and fruit growing in quantities, yet note the marvelous progress we have made in all these departments of productive industry. This improvement is not attributable to the fact that we have worked any harder than other people, but it is attributable to the fact that in California a very intelligent class of people have engaged in farming industries. The best intelligence is necessary to successful farming; no man can guess himself into prosperity. Sometimes a single idea is worth more than a thousand strong arms. Whitney, who discovered the cotton gin, was of more real value to the cotton industries of the South than all the slave labor of the cotton States; the saving caused by that single thought, illustrated by proper mechanical appliances, revolutionized the cotton industry, cheapened products, and benefited the world more than we can estimate. This did not destroy labor; it ennobled it, and gave to toil a higher plane of intelligence. So with McCormack, who first pointed out how to cut grain by machinery, and proved to the whole civilized world that from the days of the Pyramids until now this work had been done wrong; that with half the labor one man could cut more grain, and do it better, than eight or ten men could do in the old way. This was but an illustration of the principle that a high degree of intelligence is necessary for success in farming; it was applying a new thought to old practices, and a great thought it was, bringing the best intelligence to bear upon the business in which you are engaged. It illustrated, in a most marked degree, the difference between intelligent farming and farming by sheer brute force. Every grown man has muscle, but muscle alone will not compete with brain power and muscle combined. So with your combined header and thrasher. It is fast revolutionizing the manner of harvesting in the wheat producing valleys of the State. You are proud of it; so are we all. It is made in Stockton. This illustrates the idea of brain power brought to the aid of muscle. I do not mean that farmers can all be scholars, or that scholars, as such, would make good farmers, but what I do mean is, that the farmer should think about farming, and about the best farming, and that he should do what the mechanic does, namely: imitate the best mechanic, not the poorest work; visit fairs, compare products, ad-

vance as the age advances, profit by examples which are presented to him, raise the best of everything—good things always sell for good prices; take care of your land and it will take care of you. Don't forget that.

The most useful man in a community is he who produces something. The farmer is the chief producer, and that man who produces the most on a given number of acres of land with the least amount of labor or money is the best farmer. This requires an enlightened knowledge of the business in which he is engaged. There can be no greater error than that the life of a farmer offers no field to ambition and no reward for success. Many of the most distinguished men of our country have devoted their lives to farming. Washington and Jefferson were farmers; Clay and Webster were farmers, although they each were professional men. The farm is the home of industry, and often the birthplace of genius. How many of our most distinguished men have been born on the farm, and through all the earlier years of their lives have toiled with their own hands. They were disciplined in the rugged paths of labor; their food was coarse; their clothes plain, and often home made; but their sleep was sound; their conscience was clear. As one of the humblest among you, I would not exchange the pleasing and peaceful memories of my earlier farm life, toilsome though it was, for any brief honors I might enjoy; for this kind of discipline is as necessary to mental as to physical development. It fits the boy to become a man. The broad fields, the sky, the mountains, and all their great and sublime beauties, makes a man as rugged as Nature is, and the grandest work of Nature.

LABOR ON THE FARM.

But a farmer has to work. Who that succeeds in life does not? The great struggle of life is a contest often for existence, always with the hope of success, sometimes with a certainty of failure. Does the successful professional man get on without work? Does your merchant prosper without work? Go to your merchants and ask them the number of hours they work each day. Show me the man who does not work and I will show you a man you ought to avoid. Life is not a holiday, nor in any respect is the farm a playground. Farming is not learned in theory alone; it is a practical business, requiring practical knowledge of a larger number of subjects than any other pursuit. The principles of the law are learned in the colleges, in the library, or in the office. Surveying must be studied before it can be practiced. Medicine and surgery requires the most careful application and a knowledge of its principles before the student attempts to be a doctor. But the prevailing opinion is that anybody can be a farmer. The boy that is unfit for anything else is turned loose on the farm with a belief that farming is born in a man, and that knowledge of farming comes with his first breath. Why, you often see gentlemen of leisure, especially in the older States, when they become wearied of all other pursuits, turn farmer just to keep themselves busy. They don't hurt anything, they do no harm, they all fail at it, and then we hear the old cry that farming does not pay. They forget that successful farming depends more on the man than on the farm. You all know that success is not an accident; there is no luck about farming, unless sometimes come bad luck. You have to force success; it is just like other business, you must follow it well and

thoroughly or you will fail. You must plant at the right time and in the right manner or your crop will not reward your labors. There are failures enough which is not the fault of the farmer, and which the farmer cannot defend himself against. No man can devote two months to planting his crop, two months to harvesting it, and eight months to the corner grocery, and succeed.

We often read of new systems of education, like learning French without a master, or new patent medicines which are advertised will cure every known malady, and do it right off. These things are all possible, however improbable they may be, but no system of farming has ever been discovered, or ever will be discovered, where a man can crop his farm year after year and put nothing back on the land and not wear it out. Manure is just as valuable in this country as in any other place in the world. In Napa County every pound of manure is now saved and put upon the vineyards. I do not say that there are better farmers there than you are, but in our valley the grape vine requires some nourishment, and it gets it, and it pays to do this. A very distinguished French writer, and one of the French Commissioners of Viticulture, reported to his Government some years since, after making the most careful and patient examination of the subject of manures, extending through a term of years, that for every pound of good barnyard manure they got back one of grapes. Now, in Napa County we sell good grapes for \$30 a ton, which would be a cent and a half a pound for your manures. This may seem anomalous to those who dump their manure in the slough or burn it up, or leave it as an ornament to the barnyard. Haul your manure out on the land in the Fall and scatter it and plow it under, and it is as useful to the lands in California as it is to any land in the world.

DIVERSIFIED PRODUCTION.

The fertility of our soil will not always continue, unless we give it back something that we take from it. In this connection I may be pardoned for reminding you that wheat raising will not always pay. Sooner or later, even in your great valley, you must adopt a more diversified production. The wheat growers in this fertile valley must profit by the experience of other people in other lands. You can't raise wheat always; your soil will wear out for wheat production, even though you manure it. Sooner or later you must produce something else, or not produce anything. Look at New York and Pennsylvania. The Genesee Valley, in the State of New York, was once the finest wheat-growing region in the United States. Now the farmers in that beautiful valley do not raise even enough wheat for home consumption; but they have adapted the soils to other uses. You can raise cattle wherever you can raise wheat, although small farmers would, of course, have to raise their stock upon a small scale. Everybody cannot have 5,000 acres of land, or 1,000 head of cattle. Indeed, it would be better that there were no such farms in the country; but every man who has a farm can raise a few head of cattle and horses, and if he raise the best he can find a good market for them. The best of anything never hunts a market. You have an immense wheat crop this year. But where are the prices? You have to store your grain or sell for less than it costs to produce it; and you are the sufferers, because your eggs are all in one basket. It may be answered that this great valley was only intended for

wheat raising; that varied production will not succeed here; that you cannot raise vineyards and orchards successfully, nor can you raise stock in sufficient quantities to pay. I don't believe either of these statements. I believe that most of the lands of this valley can be utilized either for orchard or vineyard, or for successful stock raising. In any deep soils I don't see why you can't raise beets to feed your cattle, at least by limited irrigation, as well as we can in the coast counties. There may be some localities where the soil is too thin, and where wheat and barley are all that can be raised; but where you can raise wheat and barley, you can certainly raise hay, and if you can make hay, you can raise stock. Don't understand me that I am trying to tell each of you what to do with your particular farm. I fully understand that there are no two localities that are exactly alike, and that will successfully produce the same grains or the same fruits, but do know that even in this valley you will sooner or later have to adopt the system that has been more recently adopted in the Sonoma and Napa Valleys, Alameda and Santa Clara, and a part of Sonoma County, by introducing a more varied production. Where the native oak will grow the vine or the fruit tree will grow. It is true you must understand what vine or what tree to plant. In this valley I would not plant the kind of grapevines or attempt to make the kind of wine that we make in Napa and Sonoma, nor would I plant the same fruit trees on the plains that I would plant there. This is not necessary. You can find both vine and fruit trees that will pay you quite as well as ours pay us there, and will grow equally as luxuriant.

SAN JOAQUIN'S FUTURE WEALTH.

Under this new system of canning and drying fruits California has the world for a market, and the future wealth of the valley of the San Joaquin will rest more on the number of boxes of fruit and casks of wine and brandy it produces than in the number of the sacks of wheat. And this is all the more certain because now we have to compete with India with its cheap servile labor in raising small grains. It is stated by a very distinguished authority that ordinary farm labor in India can be obtained at from ten cents to twenty-five cents a day to the man, and transportation is now so much cheaper from India to Europe that it will be but a few years when if the ratio of increase of production in India continues for the next ten years as it has the past ten, then Liverpool will no longer be a market for our small grains, and we will be compelled to adopt a more varied production whether we wish to or not. It is my most profound conviction that the time is fast approaching when the great wheat growers of this valley must raise more cattle, more fruits, and less wheat if they hope to make their farming enterprises pay.

Those who plant vineyards and orchards now have better opportunities for success than those who planted them fifteen years ago, because now the fruit grower has all the experience which the last fifteen or twenty years have furnished to the people of this State. We know better to-day what kinds of grapes, or what character of fruits, are adaptable to the peculiar soils of the different localities of this State; what the climate effects are upon these fruits. We know better to-day where the fruits ripen more perfectly, and what kinds of fruits are best to plant in such localities as San Joaquin. We know that in Napa and Sonoma Counties we cannot successfully com-

pete with you in the culture of apricots; we know that we can successfully compete with the world in making light dry wine, but we know that we cannot successfully compete with you in making either raisins or burgundy wine, or the sherries, or the port, or possibly brandies. This knowledge every beginner in the field of viticulture now gets without paying for it; but we, who were the first in this field of horticulture and viticulture, had to purchase this information by the experience of many failures.

Farming cannot be overdone. There will never be too many people engaged in this business, nor will there be too many farms. The danger is, there will be too few farms, and these too large. A republic cannot long survive when the lands are concentrated in the hands of a few men. Any man will fight for his home, but it takes a very brave man to fight for the privilege of working for half wages. An interest in the soil gives an inspiration to patriotism. It is the thousand little homes that dot our valley, and not the great farms all homeless and houseless, that gives security to this Nation. It is the independant yeomanry who love their country, "because it is their own," who in peace and in war will maintain its honor and its glory. It is the toilers with brawny arms and great hearts who have builded this mighty Republic, and who will be found defending it so long as virtue and patriotism has an abiding place in the hearts of men.

PREMIUMS AWARDED—1884.

FIRST DEPARTMENT.

LIVE STOCK.	Name of Owner.	P. O. Address.	Name of Animal.	Award.
CLASS I.—THOROUGHBRED HORSES.				
Best stallion, three years old or over.	San Joaquin Stock Breed- ers' Association	Stockton	Joe Daniels	\$25 00
Second best stallion, three years old or over	George Howson	Sacramento	Jim Douglas	\$8 00
Best sucking colt	J. W. Adams	Los Angeles	Botherford	\$4 00
Best mare, three years old or over.	J. W. Adams	Los Angeles	Aunt Betsy	\$20 00
Second best mare, three years old or over	J. W. Adams	Los Angeles	Fannie D	\$8 00
Best mare, two years old	N. W. Randall	Stockton	Henrietta	\$15 00
CLASS II.—ROADSTERS.				
Best stallion, four years old or over.	B. E. Harris	San Francisco	Adventure	\$25 00
Best stallion, three years old or over.	J. H. Tennent	Pinole	Alert	\$15 00
Best mare or gelding, four years old or over	J. H. Tennent	Pinole	Twinkle	\$20 00
Second best mare or gelding, four years old or over	Ed. Younger	San José	Whisper	\$8 00
Best mare or gelding, two years old	J. H. Tennent	Pinole	Athena	\$12 00
MATCHED ROADSTERS.				
Best span	D. J. McCarty	San Francisco	Joe and Harry	\$25 00
Second best span	L. U. Shippee	Stockton	Six-year old bays	\$8 00
Best trotting sucking colt.	C. W. Turner	Stockton	Black Al	\$5 00
Second best trotting sucking colt	B. E. Harris	San Francisco	Relief	\$2 00
Best trotting sucking filly	R. E. Stowe	Stockton	Bay filly, by Mt. Vernon	\$5 00
Second best trotting sucking filly	W. H. McKee	Stockton	Black filly, by Mt. Vernon	\$2 00
CLASS III.—HORSES FOR ALL PURPOSES.				
Best stallion, three years old and over	A. Starkweather	Farmington	Tasso	\$25 00
Second best stallion, three years old and over	S. A. Curley	Stockton	Nephew, Jr.	\$8 00
Best stallion, two years old	F. S. Hach	Stockton	Nelson Nutwood	\$15 00
Second best stallion, two years old	Edwin Thomas	French Camp	Comet	\$5 00
Best stallion, one year old	Frank Sievers	Stockton	Fred	\$9 00

Second best stallion, one year old	B. E. Harris	San Francisco	Sir Whipple	\$3 00
Best sucking colt	Perry Yaple	Ripon	Billy	\$4 00
Best mare, three years old or over	R. E. Stowe	Stockton	Pinafore	\$15 00
Second best mare, three years old or over	G. W. Brandon	Canby	Lady May	\$5 00
Best mare, one year old	George Thrush	Stockton	Daisy	\$6 00
Second best mare, one year old	B. E. Harris	San Francisco	Echolo	\$2 00
Best sucking filly	E. H. Perry	Lockeford	Ch. filly, by Hambletonian	\$3 00
FAMILIES.				
Best stallion, other than thoroughbred, with ten or more of his colts	C. K. Bailey	Stockton	Eureka, and thirteen colts.	\$20 00
Best mare, other than thoroughbred, with four or more of her colts	L. U. Shippee	Stockton	Ryan mare, and her colts	\$10 00
CLASS IV--ROADSTERS.				
Best stallion, three years old or over	C. K. Bailey	Stockton	Eureka	\$25 00
Second best stallion, three years old or over	M. Rose	Galt	French Lyon	\$8 00
Best stallion, two years old	C. K. Bailey	Stockton	Royal Tom	\$15 00
Second best stallion, two years old	E. Wilkins	Stockton	Hector	\$5 00
Best stallion, one year old	C. K. Bailey	Stockton	George Washington	\$9 00
Best sucking colt	C. K. Bailey	Stockton	Waterloo	\$4 00
Best mare, three years old or over	C. K. Bailey	Stockton	Cantata Queen	\$15 00
Best mare, one year old	C. K. Bailey	Stockton	Maggie Trailer	\$6 00
Best sucking filly	C. K. Bailey	Stockton	Moss Rose	\$3 00
CLASS V--CARRIAGE HORSES.				
Best carriage team, sixteen hands high or over, owned and used as such by the exhibitor	B. E. Harris	San Francisco	Colonel and Elmo	\$20 00
Best single carriage animal, owned and used as such, shown to buggy or carriage	Thomas Sedgwick	Stockton	Tommy	\$10 00
CLASS VI--MULES.				
Best span	L. U. Shippee	Stockton	Mollie and Callie	\$15 00
CLASS VII--JACKS AND JENNETS.				
Best jack, three years old and over	L. U. Shippee	Stockton	Castilian	\$25 00
Second best jack, three years old and over	J. D. Patton	Lodi	Brigham Young	\$8 00
Best jack, two years old	W. K. Walker	Stockton	Napoleon	\$15 00
Best jack, one year old	L. U. Shippee	Stockton	Major Kent	\$12 00
Best sucking jack	L. U. Shippee	Stockton	Black	\$5 00
Best jennet, three years old or over	L. U. Shippee	Stockton	Topsy	\$20 00
Second best jennet, three years old or over	L. U. Shippee	Stockton	Mag	\$6 00
Best jennet, two years old	W. F. Freeman	Stockton	Native	\$15 00

FIRST DEPARTMENT—Continued.

LIVE STOCK.	Name of Owner.	P. O. Address.	Name of Animal.	Award.

THIRD DEPARTMENT.

MACHINERY, IMPLEMENTS, ETC.

Exhibitor.	P. O. Address.	Article Exhibited.	Award.
CLASS I.			
Stockton C. H. & A. Works	Stockton	Shippee combined harvester	\$250 00
H. C. Shaw	Stockton	Straw header	\$10 00
Bailey, Badgley & Co.	Stockton	Mowing machine (Victor)	\$5 00
Grangers' Union	Stockton	Steel plow	\$3 00
Grangers' Union	Stockton	John Deere gang plow	\$3 00
Grangers' Union	Stockton	Cast plow	\$3 00
Grangers' Union	Stockton	Subsoil plow	\$5 00
H. C. Shaw	Stockton	Gem chain grain sower	\$5 00
Bailey, Badgley & Co.	Stockton	Judson 3-section iron harrow	\$3 00
Grangers' Union	Stockton	Thomas horse rake	\$3 00
Grangers' Union	Stockton	Boss straw cutter	\$3 00
Hill & Miller	Sacramento	Miller's Lightning hay press	Medal.
H. C. Shaw	Stockton	Buckeye shoe seed drill	\$3 00
H. C. Shaw	Stockton	No. 4 Union churn	Medal.
Grangers' Union	Stockton	Mitchell's new cultivator, large	\$5 00
Bailey, Badgley & Co.	Stockton	Judson vineyard cultiv'r, small	\$3 00
Grangers' Union	Stockton	Byron Jackson's horse fork	\$5 00
Grangers' Union	Stockton	Cutts' improved grain separator	\$5 00
Grangers' Union	Stockton	Byron Jackson's derrick fork	\$5 00
K. W. Jones	Lemoore	Field roller and crusher	\$5 00
CLASS II--WHEELWRIGHT WORK.			
John Caine	Stockton	Display of carriages	\$10 00
John Caine	Stockton	Two-horse farm wagon	\$5 00
John Caine	Stockton	Single top buggy	\$5 00
John Caine	Stockton	Four-wheeled truck	\$5 00

SPECIAL RECOMMENDATIONS.

- The various Awarding Committees made the following recommendations:
- To S. L. Gaines' combined header and thrasher, exhibited by S. L. Gaines, special mention.
 - To chilled steel plow, shown by H. C. Shaw, Stockton, special mention.
 - To Corbin harrow, shown by Grangers' Union, Stockton, special mention.
 - To loading, stacking, and hay pitching machine, shown by Byron Jackson, San Francisco, special mention.
 - To Buckeye cider press, shown by John Caine, also H. C. Shaw, Stockton, premium.
 - To Grangers' Union, for best display of agricultural implements, premium.
 - To Reed & Shelton's mechanical motor for raising water, shown by Reed & Shelton, San Francisco, special mention.
 - To four-horse wagon, shown by John Caine, Stockton, special premium.
 - To two six-horse wagons, shown by John Caine, special premium.
 - To vineyard plow, shown by Grangers' Union, Stockton, special mention.
 - To washing machine, shown by Grangers' Union, Stockton, special premium.
 - To barn door hinges, shown by Grangers' Union, Stockton, special premium.
 - To Buckeye shallow pump, shown by H. C. Shaw, Stockton, special premium.
 - To Buckeye deep well pump, shown by H. C. Shaw, Stockton, special premium.
 - To Buffalo forge, shown by H. C. Shaw, Stockton, special premium.
 - To Perfection single and double whiffletrees, shown by H. C. Shaw, Stockton, special premium.
 - To scraper, shown by Stockton Combined Harvester and Agricultural Works, Stockton, special premium.
 - To wagon bed, shown by Stockton Combined Harvester and Agricultural Works, Stockton, special premium.

SPEED PROGRAMME.

TUESDAY, SEPTEMBER 23, 1884.

(Missing numbers declared off.)

RACE No. 2—TROTTING.

Purse \$1,000. 2:36 Class.

Name and Pedigree of Horse.	By Whom Entered.	P. O. Address.
Rarus.....	Armstrong & Carrington.....	Salt Lake City.
Ned Forrest, by Blackbird.....	John McIntyre.....	Chico.
James H.....	George W. Bayliss.....	San Francisco.
LaGrange, by Sultan.....	L. J. Rose.....	San Gabriel.
Col. Hawkins, by Echo.....	J. D. Young.....	Sacramento.
Menlo, by Nutwood.....	Pat. Farrill.....	San Francisco.
Blanche, by Gen. McClellan.....	William Bihler.....	Petaluma.
Fred Arnold, by Nephew.....	William Johnson.....	Oakland.
Guy Wilkes, by Geo. Wilkes.....	San Mateo Stock Farm.....	San Mateo.
Joe Arthurton, by Arthurton.....	San Mateo Stock Farm.....	San Mateo.
Ralph Bugle, by Johnny Bull.....	W. H. E. Smith.....	Oakland.

<i>Position at Starting.</i>	<i>Position at Close.</i>
1. Blanche.....	Guy Wilkes.....1 1 1
2. Menlo.....	LaGrange.....2 2 3
3. James H.....	Colonel Hawkins.....3 3 2
4. Guy Wilkes.....	Blanche.....4 5 4
5. LaGrange.....	Menlo.....5 4 5
6. Colonel Hawkins.....	James H.....dis.

Time—2:25; 2:24½; 2:26.

RACE No. 3—RUNNING.

Mile dash. District two-year old Class. Purse, four hundred dollars; four moneys; fifty, twenty-five, fifteen, and ten per cent of purse.

Name and Pedigree of Horse.	By Whom Entered.	P. O. Address.
Laura T, by Joe Daniels.....	G. W. Trahern.....	Stockton.
Joe Walker, by Joe Daniels.....	E. T. Lowry.....	Fresno.
Jack Frost, by Joe Daniels.....	E. T. Lowry.....	Fresno.
Henrietta, by Joe Daniels.....	A. Miller.....	Sacramento.

<i>Position at Starting.</i>	<i>Position at Close.</i>
1. Laura T.....	Joe Walker.....1
2. Joe Walker.....	Laura T.....2
3. Henrietta.....	Jack Frost.....3
4. Jack Frost.....	Henrietta.....4

Time—1:49½.

RACE NO. 5—TROTTING.

District four-year old Class. Purse, four hundred dollars.

Name and Pedigree of Horse.	By Whom Entered.	P. O. Address.
Jim Mulvena, by Nutwood	Sargent Brothers Gilroy.
Ha Ha, by Nephew	Fred. Arnold Stockton.
Magdalena, by Peerless	D. C. Horton Sumner.
Baby Mine, by Nephew	C. W. Dudley Oakdale.

Position at Starting.	Position at Close.
1. Jim Mulvena	Ha Ha
2. Ha Ha	Jim Mulvena
3. Baby Mine	Baby Mine

Time—2:30½; 2:27½; 2:31½; 2:31½; 2:34½.

WEDNESDAY, SEPTEMBER 24, 1884.

RACE NO. 6—RUNNING.

Selling race; one mile and repeat. Purse, six hundred dollars; valuation, one thousand dollars—three pounds off for each one hundred dollars below, and two pounds added for each one hundred dollars above.

Name and Pedigree of Horse.	By Whom Entered.	P. O. Address.
Certiorari, by Joe Daniels	G. W. Trahern Stockton.
Belshaw, by Wildidle	E. B. Johnston Chico.
Jou Jou, by Monday	N. Kelly San Francisco.
Philip S, by Leinster	P. Siebenthaler Sacramento.
Nealie, by Joe Daniels	D. S. Terry Stockton.
Billy Foote, by Norfolk	Wm. M. Murray Sacramento.
Duke of Monday, by Monday	Rancho Del Paso Sacramento.
Beaconsfield, by Hockhocking	E. J. Baldwin Los Angeles.

Position at Starting.	Position at Close.
1. Duke of Monday	Philip S
2. Certiorari	Duke of Monday
3. Philip S	Certiorari

Time—1:44½; 1:43½.

RACE NO. 8—TROTTING.

Purse, one thousand dollars. Three-year old Class. The following made second payment:

Name and Pedigree of Horse.	By Whom Entered.	P. O. Address.
Bay Rose, by Sultan	E. Giddings Lemoore.
Nona Y, by Admiral	A. A. Yeager Suisun.
Mt. Vernon, by Nutwood	J. A. McCloud Stockton.
Voucher, by Nephew	G. W. Trahern Stockton.
Tabbie Rosenbaum, by Nutwood	D. S. Rosenbaum Stockton.
Leleeps, by Nutwood	John Williams Stockton.

Frank Kleiner	Chico	Best 14 varieties Calif'nia paints	Diploma.
CLASS XI.			
J. W. Henderson	Chico	Best collection of minerals illustrating geology of California	\$5 00
J. W. Henderson	Chico	Best collection illustrating ornithology of California	\$5 00
J. W. Henderson	Chico	Best collection natural fishes	\$5 00
J. W. Henderson	Chico	Best collection of crystallized minerals of California	\$5 00

FIFTH DEPARTMENT.

Exhibitor.	P. O. Address.	Article Exhibited.	Award.
CLASS I.			
John Bidwell	Chico	Best sack of flour	\$3 00
George W. Warfield	Chico	Best sack of barley	\$2 00
John Bidwell	Chico	Best sack of corn meal	\$2 00
George W. Warfield	Chico	Best sack Salt Lake club wheat	\$5 00
W. H. Farren	Tehama Co.	Best sack of corn	Diploma.
W. H. Farren	Tehama Co.	Best pop corn in ear	Diploma.
W. H. Farren	Tehama Co.	Best tobacco plant	Diploma.
George W. Warfield	Chico	Best cotton plant	Diploma.
Mrs. J. F. Entler	Chico	Best ten pounds lard	\$2 00
Charles Ball	Chico	Best evergreen millet	Diploma.
Charles Ball	Chico	Best evergreen millet seed	Diploma.
Snow & Craig	Chico	Best exhibit manufact'd tobacco	\$5 00
CLASS II.			
W. H. Farren	Tehama Co.	Best box of prolific potatoes	\$2 50
W. H. Farren	Tehama Co.	Best box of snowflake potatoes	\$2 00

FIFTH DEPARTMENT—Continued.

Exhibitor.	P. O. Address.	Article Exhibited.	Award.
W. H. Farren	Tehama Co.	Best half bushel sweet potatoes	\$1 00
W. H. Farren	Tehama Co.	Six marrow squashes, six cucumbers, six sugar beets, one box tomatoes	Special, \$7 00
John Bidwell	Chico	Best table display of vegetables	\$10 00
W. H. Kemp	Chico	Best table display of melons, corn, seeds, and fruit	Special, \$5 00
CLASS III.			
Mrs. L. H. McIntosh	Chico	Best display of cut flowers	\$2 50
Mrs. E. A. Pegden	Chico	Best display conservatory plants	\$2 50
John Bidwell	Chico	Best collection of foliage plants	\$5 00
CLASS IV.			
David Reid	Chico	Best two home-made cheese	\$2 00
CLASS V.			
Mrs. J. E. Walker	Chico	Best raised biscuits	\$1 00
Mrs. J. E. Walker	Chico	Best soda biscuits	\$1 00
Mrs. J. E. Walker	Chico	Best domestic corn bread	\$1 00
Mrs. J. E. Walker	Chico	Best domestic brown bread	\$1 00
Mrs. J. E. Walker	Chico	Best display of domestic bread	\$5 00
Mrs. N. D. Rose	Chico	Best loaf of salt rising bread	\$1 00
T. B. Hart	Chico	Best four loaves bakers' bread	\$1 00
T. B. Hart	Chico	Best one loaf bakers' rye bread	\$1 00
T. B. Hart	Chico	Best loaf bakers' Graham bread	\$1 00
T. B. Hart	Chico	Best bakers' raised biscuits	\$1 00
T. B. Hart	Chico	Best display pastry and confectionery	\$5 00
David Reid	Chico	Best six pounds butter in rolls	\$2 00

SIXTH DEPARTMENT.

Exhibitor.	P. O. Address.	Article Exhibited.	Award.
CLASS I.			
John H. Guill	Chico	Best six varieties of apples	\$2 00
John Bidwell	Chico	Best twelve varieties of apples	\$5 00
John Bidwell	Chico	Best display of apples	\$5 00
John H. Guill	Chico	Best six varieties of pears	\$2 00
G. W. Turner	Chico	Best two varieties of pears	\$1 00
John Bidwell	Chico	Best twelve varieties of pears	\$5 00
John Bidwell	Chico	Best display of pears	\$5 00
John H. Guill	Chico	Best six varieties of peaches	\$3 50
John H. Guill	Chico	Best variety of peaches	\$1 00
John Bidwell	Chico	Best display of peaches	\$5 00
John H. Guill	Chico	Best variety of plums	\$2 50
John Bidwell	Chico	Best display of plums	\$2 00
John Bidwell	Chico	Best display of pomegranates	\$3 00
John Bidwell	Chico	Best display of green figs	\$2 00
John H. Guill	Chico	Best display of seedling fruits	\$2 50
John Bidwell	Chico	Best display of fruit by producer	\$5 00
John Bidwell	Chico	Best general display of canned fruit from Chico Cannery	\$15 00
Horticultural Society	Chico	Best general display of fruit, vegetables, etc.	\$50 00
CLASS II.			
Mrs. J. F. Entler	Chico	Best ten pounds honey	\$2 00
Mrs. Levi Smith	Chico	Best three jars red currant jelly	\$2 00

By overdraft.....\$3,787 72

ANNUAL ADDRESS.

DELIVERED AT PETALUMA, AUGUST 28, 1884, BEFORE THE FOURTH DISTRICT AGRICULTURAL ASSOCIATION, BY ALBERT G. BURNETT.

MR. PRESIDENT, LADIES AND GENTLEMEN: In the short address that I propose to deliver, I shall endeavor to emphasize these two propositions:

1. The cultivation of the soil is the most delightful occupation that can engage our efforts.

2. Our own district affords superior inducements to those desiring to follow the pursuit of agriculture.

I shall also attempt to call your attention to some of the advantages that these annual fairs afford, and, to be in fashion, I may indulge my propensity to give some advice, which is always in order, and which no one is expected to heed. These propositions that I have stated, are very simple, and yet I venture to say that they are not fully appreciated even by our own community. If we were to judge by the conduct of many of the young people who seem so anxious to exchange their country homes for city life, we would necessarily conclude that the farm is a place for toil, anxiety, and restraint, instead of the habitation of ease, comfort, freedom, and health, as we have been induced to consider it. It is surprising that the young men who have been reared on the farm, should be ambitious to decorate by their manly presence, the street corners of our cities, or to measure their lives by bolts and yards of calico. I would not, intentionally, say anything in derogation of the importance of cultivating a taste for the beautiful, neither would I discourage any one in his efforts to excite admiration by displaying his superior physical attractions, but still, I insist that it is inexplicable that the charms of the city should be sufficiently potential to attract the boys and girls from the firesides of the country. I believe that we have a right to affirm that the farm ought to be the most attractive place in the world. No doubt it is frequently made unendurable to the sensitive soul, because no effort is made to satisfy and stimulate the aspirations for those intellectual refinements that are the boast of our modern civilization. It is not to be expected that the necessary labor of farm life will be neglected. But the farmers ought to realize that their children have intellectual, moral, and social faculties that require encouragement and development. If the farm does not afford the means for enjoyment and improvement adequate to the demands of our natures, they will be sought elsewhere.

While it is true that many of our agriculturists are not fully alive to the importance of surrounding their homes with the comforts and luxuries that are within the reach of energy and perseverance, and while farm life is too often the synonym for unrequited toil and harrowing discontent, yet I presume it will not be disputed that the influences belonging particularly to the occupation to which I have referred are exceedingly favorable for the development of vigorous

and noble specimens of manhood and womanhood. Even if the boys do eat their mashed potatoes with a knife and wear high-heeled boots, their circumstances, if they but appreciate them, give them a great advantage over those "cooped up" in our towns and cities. There is no reason why, unless it be the parsimony and ungenerous greed of mistaken economy, that everything calculated to contribute to success and happiness should not be welcomed to the homes of our farmers. And it is a duty incumbent upon us all, not only to do our utmost to set forth properly the advantages of the farm, but also to add to those advantages by all the means within our power.

Instead of the prevalent disposition to seek the city, our young people ought to be drawn irresistibly to the country. There ought to be a greater respect, a more ardent love for the occupation of "tilling the soil." Who has a better opportunity than the farmer of seeing and enjoying nature in all its pleasing aspects? Who can better appreciate the force of the poet's sentiment: "To him who, in the love of nature, holds communion with her visible forms, she speaks a various language. For his gayer hours she has a voice of gladness and a smile and eloquence of beauty, and she glides into his darker musings with a mild and healing sympathy that steals away their sharpness, ere he is aware."

But it is a work of supererogation to argue that which you all admit. I simply desire to fortify the minds of the young ladies and gentlemen present against the seductive influence of that idea so prevalent in some localities, that those who remain on the farm are placed at a disadvantage in the great struggle of life.

I want now to call your attention to the second proposition that I stated in the beginning. Statistics are but a feeble indication of the present and an unsatisfactory promise of the future, but as a text for a partial development of the position assumed, let me refer you to a few facts about a part only of this Fourth Agricultural District. I use this county principally as an illustration. What I say in regard to its prosperity will apply with equal force to other portions of the district. According to the census of 1880, the entire population of Sonoma County was 25,926; we are credited with 2,229 farms; 493,370 acres of improved lands; the farms, fences, and buildings are valued at \$16,950,760, farming implements and machinery at \$344,433, live stock at \$1,578,368. The previous year there were produced in this county 256,007 bushels of barley, 152 bushels of buckwheat, 158,829 bushels of corn, 68,685 bushels of oats, 4,058 bushels of rye, 742,123 bushels of wheat, \$168,767 worth of orchard products, 47,121 tons of hay, 66,250 pounds of hops, 682,028 bushels of potatoes, and 320 bushels of sweet potatoes. In addition to this imperfect inventory of our wealth, we are credited with 212 manufacturing establishments, involving a capital of \$1,140,695. With the wine, wool, stock, and dairy interests, aggregating thousands of dollars yearly, we may justly infer that our claim to be a prosperous community will be recognized by those who are sufficiently interested to compare our condition with that of other localities, and who have sufficient intelligence to discriminate in favor of a soil that responds to the homage of industry with a never failing harvest of plenty, and of a climate that makes it possible for us to compete, in the variety and quality of our products, with the same extent of territory in any part of the world.

That the men of strength and energy in almost any part of the

United States can obtain a fair return for their toil and capital; that all over our beautiful country the conditions are favorable for financial success and for moral and social life, is not simply a borrowed expression appropriated through the force of custom to do service upon the present occasion, but we all recognize it as the plain and simple language of truth and soberness. However, according to the dispassionate judgment of those who are qualified to decide, no place can offer greater inducements to those desiring to locate where life may be enjoyed, than can this part of the Golden State. While it may not be commendable to make invidious comparisons, nor to feel unduly elated because fortune has smiled upon us, yet we may find it beneficial to go away from home occasionally to mingle with other people and to become somewhat familiar with other scenes and surroundings. Thereby we shall be better prepared to estimate properly the blessings that greet us every day at our very doors. Those who have lived here and have gone away, either to visit or to remain, have almost invariably returned sooner or later, with the conviction firmly established that there are sufficient advantages here to render it unnecessary for any one to seek elsewhere for that comfort, prosperity, and happiness which we are all striving to obtain.

If we declare the truth when we affirm that our soil is fertile and unexcelled, the climate is mild and delightful, the scenery is varied and beautiful, the condition of society is exceptionally good, and that all of our industrial interests are prosperous, we may be pardoned, certainly, if we appear somewhat proud of our possessions; we shall not be condemned if we manifest an unusual interest in such an exhibition of our resources as we are permitted to behold to-day. It may fairly be questioned, notwithstanding the varied means of information, whether even our own people be conscious of the vast stores of wealth that lie concealed in our soil, waiting the hand of industry to develop them. We know that away from home very erroneous ideas are entertained concerning us.

Last Summer, while visiting in our sister State, on the north, I frequently expressed my admiration for the verdant fields, the limpid streams, the magnificent forests, and the pleasing alternation of mountain and valley, always present there to charm the eye of the beholder. I witnessed, with pleasure, the evidences of progress on every hand. My friends said that when they were connected by iron bands with the East and with California, the State of Oregon would begin, with great promise, the race for that distinction among the States to which she is naturally entitled. While acknowledging that her resources are inexhaustible, and that her prospects are undimmed by any indication of adversity, I mildly suggested that the prevalent opinion of the superabundance of rain in Oregon would have a tendency to enable California to maintain for all time to come her acquired superiority in population and wealth. They assailed my intimation with good-natured raillery, and declared that an occasional superfluity of rain is decidedly preferable to our periodical droughts. From the opinions of those living at a distance you would conclude that our State is at times a veritable Sahara. They do not appear to realize or to know that there is a county here large enough for an empire, in whose history a failure of cereals is a thing entirely unknown. Nor do they apparently understand that if other parts of the State were to fail to produce a single vegetable product, we could, from our abundance, easily supply all the physical wants of our

people. Is it not a duty we owe to society to disseminate accurate information concerning our resources? And is it not true that a great responsibility rests upon those who are engaged in agricultural pursuits, and upon whom, largely, depends the future of a region so liberally endowed by nature? Ought they not to avail themselves of every opportunity that will contribute to their store of knowledge, and that will assist them in properly discharging their trust?

With these considerations in view, the Directors of the Fourth District Agricultural Association have made ample provision and have offered generous inducements for the exhibition of the best products of our labor. That they have acted wisely in voluntarily submitting to the trouble and expense incident to such a magnificent undertaking, no one can seriously call in question. These annual gatherings, composed as they are of the thinking and progressive representatives of the industrial pursuits, are a factor of incalculable importance in that education of the people which our own necessities and the demands of this age require. The advantage of these fairs must be obvious to every reflecting mind, and certainly in no part of the world do they promise more than in California, and in no part of California, perhaps, do they accomplish as much as in our own district. Besides exhibiting the choice fruits of our toil, and indicating in a vivid manner our possible achievements, the influence upon the minds of those more directly interested that these fairs exert to produce energy, awaken enthusiasm, and to inspire to a higher conception of duty, cannot be overestimated. We behold here a monument of the wisdom and sacrifice of those who believe that where "there is the most of life there is the victory." The public sentiment that encourages and sustains these annual displays, these friendly contests of skill and strength, indicates in what high repute the sterling qualities of a vigorous individual and national life are held. They lead us to believe that the majority of our citizens are profoundly convinced that every man is under a solemn obligation, in whatever sphere of life he moves, and with whatever endowments nature has enriched him, to manifest the greatest activity possible in the service of his fellow man, and to feel the greatest interest in the physical, intellectual, and moral education of our race. The efforts of the Directors and friends of this association assure us that mediocrity finds no encouragement here, and that we are willing to do what we can to bring prominently into view the inducements that California is able to offer those desiring prosperous and happy homes.

But however advantageous to a community such a fair as this may be, we shall not be benefited to any great extent individually, unless we place ourselves in the attitude of learners. Not only a willingness to impart what information we can, but a disposition to interrogate every suitable person, and to avail ourselves of every opportunity for a contribution to our mental possessions, should be displayed upon an occasion like this. We ought to feel that we do not discharge our obligations to God and to society unless we use that which has been committed to our control in accordance with our best judgment, unless we act in harmony with the spirit of progress and inquiry, and are willing to receive light from whatever source it may emanate. These exhibitions of the superior skill of our people and of the varied products of our soil, every citizen ought to attend, not simply to gratify idle curiosity, but for the purpose of coming into contact with

earnest men, and to derive new inspiration for the labors of every day life.

No doubt we are indebted to the centuries of the past for much that is valuable to our social and political life, but from the superior agricultural implements, the extraordinary diversity of industrial products, the multiplicity of labor-saving contrivances, the wonderful explorations of the laws and mysteries of nature that have characterized this age, we must conclude that humanity has begun a new existence, and that, in order to maintain an honorable position in society, we must counsel with the ever-living present, and not refuse to adopt what the experience of others recommends as worthy of trial and confidence. We may entertain the highest respect for opinions that have come down to us from antiquity, and for methods of industry that are the heirloom of the ages, but in order to reap a measure of success commensurate with our ability we must recognize the fact that this is a progressive age, with new ideas, with bold methods and original purposes. It is a sufficient cause for congratulation that a belief in the necessity of culture to prepare the individual for agricultural pursuits has become almost universal. And as an evidence of modern progress, we may refer to the establishment and support of schools splendidly equipped and with able instructors, devoted exclusively to the interests of the soil. That no special instruction is needed for that pursuit upon which we are all so dependent, is accepted as the gibberish utterance of a spirit of inanition and decadence to which all progress and improvement are hostile. The farmers are fortunately beginning to realize the importance, not only of striving to avail themselves directly of the advantages of education, but also of demanding that recognition by the Government to which the importance of their calling entitles them. As a favorable omen for the future of our country, let us remember the attitude towards social and political questions that the agriculturists are beginning to assume. These "solid citizens," who are the bone and sinew of the land, are beginning to ask, as if they intended their petition to be heard, not only that a part of the immense revenue of this country shall be expended directly in their interests, but that the legislative and executive functions of the Government shall be exercised for their protection against the unjust exactions of large aggregations of capital and strong combinations of capitalists.

But our industrial classes, to succeed as they deserve, must learn the lesson of coöperation. They must learn to use their powerful influence in molding public sentiment, and in directing the legislation of the country. Heretofore, just prior to elections, they have been the recipients of much attention and flattery from prospective office-holders, but it is a truth generally recognized, that the claims of those representing the best interests are too frequently subordinated to the selfishness and rapacity of the unscrupulous minority. There must be something grievously wrong in society, when it is possible for an organization, whether called a board of trade, stock exchange, or designated by some other appellation, to absorb the profits of the producer, and to harass the consumer, without regard to the law of supply and demand. A writer in the *North American Review* has said, "The manufacture of prices, like other modern industries, is being concentrated into vast establishments which are passing under the rule of bosses and syndicates. The markets, like political parties, are run by the machine. The people are losing the power of making

prices, as well as nominations. The coffee market of the country has lately gone out of the region of unorganized supply and demand into the hands of a coffee exchange, with all the modern improvements for speculation. A price factory, to make quotations for butter and cheese, has just been established in New York. It deals in brokers' eggs as well as hens' eggs, and has all the approved facilities to enable it to count and sell chickens that are not yet hatched out of eggs that are not yet laid." To one not initiated into the sharp practice of these speculators, it would appear unjust for the producer to be placed at the mercy of these soulless organizations. According to the ideas of justice entertained by our fathers, those who toil ought to reap the rewards of their industry.

But in considering this as well as other subjects, we must not forget that we are living in a progressive age, and that the standard of ethics is a variable quantity. However, no one but a misanthrope would wish for a return of the good old days of fifty or a hundred years ago. While at that time there was a remarkable dearth of star route conspirators and impenitent market manipulators, yet it must be admitted that advancing civilization has brought with it advantages to all classes that make life worth more now than ever before in the history of the world. Although the great power of wealth in unscrupulous hands is too often used to retard the progress and jeopardize the interests of our industrial classes, yet the inventive genius of this age and the powers of the human mind have lightened the burdens and multiplied the comforts of the toiling millions of our race. Happy for us if our laboring classes accept with becoming grace the increased responsibilities, the more exacting requirements, the larger career of usefulness that the progress of the years will necessarily bring them.

The majority of our thoughtful men, those who are skillful in interpreting the logic of events, whose earnest attention has been devoted to the progress of society, with great unanimity declare that the race will not falter in its onward and upward career. It is the idlest speculation to attempt to portray, in all its details, the condition of those who shall be so fortunate as to live upon this little earth one hundred years hence. I say fortunate—why? Because every man is fortunate who has great opportunities, ample powers, generous inducements, potential impulses, capacious knowledge, especially if all these are enlisted in the accomplishment of noble purposes. Would it not be unfortunate for us to have lived a hundred years ago? How much valuable experience the world has had since our fathers laid the foundations of this government! How the horizon of the world's knowledge has been extended and what an impulse has been communicated to those agencies that distinguish man from the beasts of the field! But the succeeding age will be panoplied with a greater measure of power than this. So we conclude from an observation of the forces at work in society, and from the careful judgment of those whose opinions are entitled to respect. May our souls be attuned to the music of still higher progress, and may we be prepared for any responsibility that the future has in store for us.

PREMIUMS AWARDED—1884.

FIRST DEPARTMENT.

LIVE STOCK.	Name of Owner.	P. O. Address.	Name of Animal.	Award.
CLASS I—THOROUGHBRED HORSES.				
Best stallion, four years old or over.....	P. Carroll.....	Bloomfield.....	Ironclad.....\$20 00
Best stallion, two years old.....	S. B. Wright.....	Santa Rosa.....	Harry Peyton.....\$12 00
Best mare, four years old or over.....	P. Carroll.....	Bloomfield.....	Nellie.....\$15 00
Best mare, two years old.....	S. B. Wright.....	Santa Rosa.....	Lalla Rookh.....\$8 00
Best suckling colt.....	P. Carroll.....	Bloomfield.....	Sunday.....\$5 00
CLASS II—HORSES OF ALL WORK.				
Best stallion, four years old or over.....	Robert Crane.....	Santa Rosa.....	Silvertail Prince.....\$15 00
Best stallion, three years old.....	J. Russell.....	Lakeville.....	Duke De Chartres, Jr.....\$12 00

OPENING ADDRESS

OF HON. L. J. ROSE, AT THE PAVILION, TUESDAY EVENING, OCTOBER 14, 1884.

LADIES AND GENTLEMEN: I have been amongst you many years more than I care to remember; have seen the great changes that have taken place in these southern counties forming this district; helped to organize this association, and from small beginnings have seen it grow to what it now is. When I first came to Los Angeles County there was no general settlement about the Mission San Gabriel. There was no Pasadena, no Alhambra, no Riverside, Pomona, Ontario. These were waste places and unoccupied, where sleek cattle and fleet wild horses roamed at will. The plow had not then broken the virgin soil nor destroyed the natural beauty of the flowers which annually reproduced themselves with renewed beauty and perfume. Our mountain streams, now imparting the loveliness to these colonies, then tumbled and foamed over bowlders and obstructions in solitary cañons, unused and almost unknown, until drank up in the sands of the plains. Springs sent forth their meandering limpid rivulets through the shade of trees, or flashed in the sunlight of the plains, being visited now and then by coveys of quail to quench their thirst, or flocks of birds, who in fluttering delight would take their evening bath. Then all was quiet and hushed in the oak-grown slopes next to the Sierra Madre Mountains, and only broken by the varied notes of the mocking-bird as he sent forth his mimic medley from the tops of a hundred trees, or by the loud beating on some decayed tree of the woodpecker, which, in the weird stillness, required no very vivid imagination to believe it the call of some genii of the woods. What a great change has taken place. Instead of all this quiet, perchance broken by some lone vaquero, now we have colonies of a thousand happy homes, each one vying with the other in its beauty of surroundings. Where there grew wild flowers now are reared by hand of loved woman the violet, the mignonette, the rose, the lily, and all the various flora of the world. Where formerly were uncultivated plains, where Pomona was only represented by the prickly cactus, man now grows in profusion and beauty the apple, the pear, the grape, the orange, the olive, the fig—in short almost every variety of fruit grown in the tropics or temperate zone. It is a transformation scene, which cannot be realized or believed except it is seen, and even then each year makes changes that fill even us with wonder.

We, of Southern California, have much to be proud of, and we may be excused if we are elated. There is no portion of this State—a State which is the brightest jewel in the diadem of our Union—which excels us in any of the beautiful productions about which all Californians boast. We raise more corn than the balance of the State; our wheat will fairly average, when compared with the whole State;

we excel in the raising of barley, and we are the peer in grapes, in pears, in apricots, in peaches, and the admitted superior in semi-tropical productions. Nor is our live stock department suffering in comparison. Take our sheep and wool clip; take our Jerseys, Durham, and Polled Angus cattle, and when critically compared with stock from other portions of the State, many blue ribbons are brought home. Take our horses for the last year, and they have created quite a ripple of admiration, both home and abroad, and our small ventures in the breeding line indicate with much certainty that we will be the favored section for producing as fleet and as beautiful animals as can be produced in the world. In view of all these varied industries, excelling in all, can it be otherwise than that we must and will be a prosperous people? We are only on the threshold of our growth and development. I see fair young faces and brave youth who will see and help make changes in this beautiful country that will be the marvel of coming generations. Our whole country will be what now is seen in some bright spot, made beautiful by the hand of man. All of our soil is fertile and adapted to some kind of culture, and although each and every locality may not be adapted to every variety of fruit culture, nor is this necessary, nor even desirable.

We want varied industries to suit the various tastes, inclinations, and desires of all. Nor is there any poverty of choice. The wide range of productions of fruits, of farm products, and of the garden, that can be grown, and grown to marvellous perfection and ease; the variety and choice of occupation that can be chosen and done well, are almost confusing. It is not what can be done, but what shall be his specialty, that troubles the beginner.

The growing of grapes for wine will no doubt be one of the leading industries; the raising of grapes for raisins, in favorable localities, will be the choice of many. The growing of the orange, the lemon, and the lime will, in localities favorable to their culture, be always a specialty confined to this district. The growing of the various fruits, like the pear, the peach, the apricot, etc., is a growing industry, and such fruits will be used for canning, for shipping in their natural state, or for drying. The drying of fruits, no doubt, will in the near future assume large proportions, for it is especially adapted to every family home; for the young and the old, all can do some part of the easy task, learning the boys and girls habits of industry and making all feel that they are sharing responsibilities and labor for the benefit of the household. Then there is the olive, which in time will be grown on our hillsides and waste places, and make employment for young and old, and yielding good profits and making a new export. The growing of seeds, both for the vegetable and flower garden, should be an industry that would pay well. California now imports at least three fourths of her wants. The making of perfumes, no doubt, will in time attract the attention of some specialist, and I know no country that would have superior advantages for either.

Our moist land will, too, play an important role in this general and diversified prosperity. Such localities are especially adapted for creameries, for the raising of pigs, for the growing of hops, corn alfalfa, potatoes, and a thousand other productions. In fact, there are so many industries, all promising fair returns for light and pleasant labor, that it would be tiring for you to listen to their enumeration, for all these things are known and suggested to you daily in this favored land of grand and varied resources. As yet little ha-

been done; we are as yet only pioneers in working out these diversified industries, growing out of our unequalled climate and fertility of our soil.

I would most respectfully urge the people of these southern counties to attend the annual reunions of these meetings, and I especially ask the attendance of the ladies, for wherever they are, you will find order, refinement, and pleasure; wherever you find them you will find man with his best behavior, with a desire to appear at his best, and with a desire to make the best exhibition in whatever department he may have articles competing. He wishes the approval and smile of his sweetheart, even if that sweetheart is his wife. Bring, too, your young folks, for fairs are great educators for the young. It teaches them to acquire correct judgment of the forms of animals, what is the best form or breed for a cow for milk or for beef, what is the best form for a horse for draft, for light work, and for speed. It brings beautiful animals with lines for utility and beauty to his notice, and he will learn to compare one breed and form with another breed, and by hearing them discussed, will learn what is the best. Thus he will form the determination to raise such stock; and this universal education of our youth, creating desires, will in turn, stock your country with the best and make your country rich. Your young ladies will see the various productions of the housewife, learning how such beautiful preserves, canned fruits, butter, or cheese are made, or seeing the fairy productions of other maidens in some fancy needlework or some beautiful painting, or the exhibition of beautiful flowers, either cut or growing, will go home with a new desire to beautify the house with like work, and will train the rose, the honeysuckle, and the jasmine, making shade, fragrance, and beauty to your cottage, fitting it for the abode where refinement, love, and contentment dwell.

Recreation is too what is needed at times to all. All work and no play makes Jack a dull boy. This continual strife and worry for the dollar, wears you out prematurely, and makes you an animal that has a treadmill path, which is neither full of joy to yourself, and certainly not to your friends nor to your families. In fairs, like in everything else, to accomplish the greatest good, or make it the most enjoyable, you want a boom. You want to see everybody and his neighbor in order to have a good time generally, and talk over all the various productions that are exhibited, and when the interest is once awakened, I warrant you next year you will, too, have something nice, which you will want your neighbor to see. There is as yet too little enthusiasm in these matters, and in the Eastern States, with less to exhibit, attendance is almost universal. A short time ago I read that in Kansas City there were forty-five thousand people attending the fair in one day, and fifteen or twenty thousand people is a common occurrence at these district gatherings, whereas, take St. Louis, and a hundred thousand people would not be uncommon. This want of attendance is unfortunate, for your directors of this association cannot make it as useful and attractive as they desire, and although the citizens of Los Angeles City may be liberal in subscribing money, they could do much better by retaining their money, and by going and inducing the attendance of all, for then money need not be subscribed by any one. Take St. Louis, Louisville, and other places, and these cities will choose one day in fair week and close up all places of

business, making it a holiday, and everybody has a general day of enjoyment.

But I will not detain you much longer. It is ever a pleasure—yes, my very nature impels me to sing the praise of our favored locality. We have a climate which is as perfect as can be found on earth, imparting health and buoyant spirits. To feel full of energy and full of life to accomplish ends with ease is common to us all. We have a generous soil, yielding abundance, with scarcely a failure whenever a call is made upon it. We have an ocean at our doors which rolls its pacific waves against our coast, which, by its trade winds, tempers the heat of Summer, and it is a highway for vessels that carry our products to the four corners of the earth. We, too, have railroads, which in a few days carry us to every part of this continent, and they have been the important factor in our prosperity. In fact, it may be stated as a certainty that these railroads have more than doubled all values in Los Angeles County in the past five years. Nor is this created value a fictitious one, for it is based upon income, for these roads have opened up new markets for the sale of our products, giving us enhanced prices by carrying wheat, wine, wool, and other products to every part of our land and to Europe, and bringing back in their return necessities or luxuries at reduced prices.

EXHIBITS AND PREMIUMS AWARDED—1884.

FIRST DEPARTMENT.

LIVE STOCK.	Name of Owner.	P. O. Address.	Name of Animal.	Premium.
CLASS I—THOROUGHBRED.				
Best colt, two years old.....	E. J. Baldwin.....	Savannah.....	Brandywine.....\$10 00
Best mare, four years old and over.....	E. J. Baldwin.....	Savannah.....	Maggie Emerson.....\$15 00

ANNUAL ADDRESS.

DELIVERED BY REV. G. P. TINDALL.

It is a principle of Holy Writ, applicable alike to all interests and all industries, to improve the talents one has, whether the number be ten, or five, or one.

It is one of the most obvious of facts that different localities on the earth afford different resources of wealth, and varied opportunities for profitable industry. As yet no other locality has become a rival of Eastern Asia for the profitable cultivation of the tea plant. Virgil's wise words are as applicable to-day as when he wrote them, 30 B. C.: "Before we cleave an unknown plain with the plowshare, let it be our care previously to learn the winds and various character of the climate, the ways of culture practiced by our forefathers, and the tillage and habits of the soil, what each country is apt to produce, and what to refuse. Here grain, there grapes more happily grow; nurseries of trees elsewhere, and herbs spontaneous bloom. Do not you see how Imolus sends saffron odors, India ivory, the soft Sakaean their frankincense? *These laws and eternal conditions nature from the beginning imposed on certain places.*"

The trend of the mountains of Europe being from east to west, the colder winds from the north are kept back from the famous southern peninsulas of that continent, while they lie fully open to the warm air of tropical Africa, and again have their atmosphere pleasantly moistened and modified by the grandest of seas, the great Mediterranean. Hence Greece, Italy, and Spain have been famous, during long ages, for the delicacy, sweetness, and flavor of their fruits. Nature gave to Southern Europe these talents, which an enlightened people early learned to improve.

By a most happy fortune that favored land did not remain unsung. Publeius Virgilius Maro set forth in immortal verse the beauties and resources of that goodly land. Possessed of a genius to see beauty, grandeur, and elegance wherever displayed, fully in love with his country, and alive with the truest appreciation of all her resources and attractive features, and thoroughly conversant with all her industries, he drew the faithful picture which his countrymen never ceased to admire, and which is as pleasing to-day as when it was written. Were he living on this coast he would be just the poet for this occasion, for he sang of "What makes the harvests joyous, under what sign it is proper to turn the earth, and join the vine to the elms." And with eminent fitness for *sunny* Italy as well as with characteristic piety, he lifts his eyes to heaven, exclaiming: "Ye brightest lights of the world that trace the year, gliding along the sky, your bounteous gifts I sing."

The time to plow, and his idea of good tillage, are thus expressed: "In early Spring, when melted snow glides down from the hoary hills, and the crumbling globe unbinds itself by the zephyr, then let

my steer begin to groan under the deep pressed plow, and the share worn by the furrow, begins to glitter. That field at last answers the wishes of the covetous farmer, which twice hath felt the sun, twice the cold; harvests immense are wont to burst his barns." Hard land was plowed four times. He advises "to suffer" the "lands, after reaping, to lie fallow every other year, and the exhausted field to harden by repose." Also, to change crops on the same field. "Oats and flax exhaust the land." Sow them early every other year, and enrich the land. He recommends thorough harrowing and frequent exercise of the land *imperiously*.

Virgil thus speaks of the farmer using irrigation; how, "on the sown corn he drives the stream and ductile rills; and when the field is scorched with raging heat, the herbs all dying, lo! from the brow of a hill tract he decoys the torrent; which, falling down the smooth rocks, awakes the hoarse murmur, and with gurgling streams allays the thirsty lands."

And they had evils to contend with as well as we. "Then various pests baffle us," he says; "often the diminutive mouse has built its cell and made its granaries; or the moles, deprived of sight, have dug their lodges under ground, and in the cavities are found vermin which the earth produces in abundance; the weevil plunder vast heaps of corn, and the ant, fearful of helpless old age."

Though not in the scientific language of to-day, yet with fullness and fine discrimination Virgil describes the facilities of soils and for what fruits and grains they are best adapted. He says: "Let not the vineyards lie toward the setting sun." And "while their infant age sprouts with new born leaves, you must spare the tender vines; to the joyous shoot raising itself on high with loose reins, the edge of the pruning knife must not be applied, but when they embrace the elms with firm stems, then cut their locks, then lop their arms; also, the whole soil must be plowed three or four times a year, and the clods be continually broken, the whole grove must be disburdened of its leaves." Then as now, "the farmer's past labor returns in a circle and the year rolls round on itself on its own steps."

Virgil also lays down rules for the management of cattle and the rearing of horses, oxen, and sheep. He says: "The colt of generous breed, from the very first walks high throughout the fields; he is the first that dares to lead the way. Lofty is his neck, his head little and slender, his belly short, his back plump, and his proud chest swells luxuriant with brawny muscles. The bright bay and bluish gray are in most request. Thick is his mane, and, waving, rests on his right shoulder." No wonder that our Italian friends seem to excel in winning wealth from the hillsides and vales of this favorable coast which, in some of its features and peculiarities, resembles far famed Italy.

The Atlantic side of our continental home extends northeast and southwest, and, the mountain ranges running in the same direction the northeast wind has a free course. The abundant vapors from the Gulf of Mexico and the Atlantic are there met and cooled and condensed, and made to drop their moisture in the frequent rains of the Southern States. These unfailing *summer showers* make the cotton crop. These States, having soil and climate so well adapted to the growth of this plant, have an inexhaustible source of wealth in this industry. They can raise cotton for all the rest of our country, and

for all Europe besides. We know of no other locality having such a combination of favorable conditions.

In Eastern Michigan the winters are liable to be so cold as to kill the peach trees, and other trees no hardier than these; but Western Michigan, lying along that beautiful great lake of the same name, has a fruit belt where peaches and other fruits are raised in great abundance; and in one night they can be shipped across the lake to Chicago, Milwaukee, and other cities, and placed in market the next morning as fresh as when they were picked.

When we come to California, we find other conditions peculiar to its own favored locality. We are on the warm side of the Pacific Ocean, as Europe is on the warm side of the Atlantic. The Japan stream does for this coast what the Gulf stream does for Western Europe. Ireland is covered with luxuriant pastures, while Labrador, of the same latitude on the west side of the Atlantic, is too cold for grass or grain. Humesfort, in Norway, seventy-two degrees north latitude, is never frozen; while Cape Farewell, south of Greenland, scarcely thaws out, and Hudson's Straits in the same latitude, is sometimes open to navigation only six weeks in a year.

Ocean currents carry more water than all the rivers of the land. The Gulf Stream leaves Florida at a temperature of eighty-six degrees, and thirty-two miles wide. In mid-ocean it is one hundred and twenty miles wide. Its greatest depth is two thousand four hundred feet. It retains much of its warmth till it gets within the Arctic Circle. So marked is the difference between the temperature of the water in the Gulf Stream and that of the rest of the ocean that two thermometers dropped at the same time from the bow and the stern of the ship when it is entering the Gulf Stream, will show a difference of thirty degrees. The Japan current in the Pacific is very similar to the Gulf Stream in the Atlantic; and causes the climate of this whole western coast to be much milder than it otherwise would be. The mouth of the Ukan River, in Alaska, is of the same latitude with Hudson Strait. This river, some two thousand miles long, carries thirty per cent more water than the great Mississippi. No such stream is possible at the same latitude on the eastern side of North America.

Then we have, on this coast, another marked feature which western Europe has not, in our mountains. Parallel chains or ranges of mountains run the whole length of western North America, from the Isthmus of Panama to the Arctic Ocean. Between them and the ocean lies California, the Italy of the continent. Note the wedge-shape of the continent. On the Atlantic side, from the south the coast extends northeast; on the Pacific side, from the south the coast extends northwest. On each side the mountain ranges are parallel with the coast. What of it? What difference does that make? The coast of California is just equal to the coast from southern New Jersey to southern Georgia. One difference is this—from New Jersey to Georgia it rains in Summer-time; in California it does not. That is a great difference. The cause of this difference is the direction of these ranges of mountains. If it did not rain in Summer-time in Virginia, North Carolina, South Carolina, Georgia, Alabama, and Mississippi, they could raise no cotton there, for they have no adequate means of irrigation. In that case the people would leave the country. What are those Summer rains worth to them? That cotton crop, which is made by these rains, is worth about three hundred millions a year. The people in that country think they have ten

talents, and they are increasing this number every year. If the coast and the mountains ran, on their side of the continent, as they do on this, they would get no Summer rains and no cotton. And if the Sierra Nevada and the Rocky Mountains could be leveled, we would have rain in Summer here in California.

But we have our resources and advantages as well as they. We have a shielded, protected climate. The mountains keep back from us that cold wind from the northeast; and they keep away from us that deadly disease, that scourge of the northeastern part of the United States, consumption. Then, we have dry harvests. The abundant rains of Winter carry through to ripening the grain crops; and, gathered in a *dry condition*, it will endure a long sea voyage, which is the cheapest transportation.

Shielded from the northeasters, our fruit trees are not killed in Winter. We can dispense with the Summer showers while we have such abundance of irrigating water from the mountains. We have better control of them than eastern people have of the clouds of Summer. In that country it does not always rain just when people want it. Then we have a clear sky and a bright warm sun, which colors, and sweetens, and flavors our fruits. Then, we have the cool mountain on the east, and on the west that greatest of oceans, cool in Summer and warm in Winter, which things give us our equable climate. In Summer, our fruit trees do not wilt; the air is always cool (in the shade), while the light and heat ripen our fruits; and in Winter the trees are not frozen.

We want cotton goods from the east, though we have plenty of wool, but they want our fruit. The more they get of it the more they want it. They have been wholly unacquainted with fruit raised under these favorable conditions. In size it seems to them fabulous; in flavor it is delicious. It cannot be produced elsewhere. El Dorado County is in the heart of this fine fruit region. The east cannot equal it. It requires the mountains and the ocean and the soil and the sun to cause such fruit to grow and ripen. The possibilities of this favored region will become more and more the wonder of our country. With care in the cultivation, and in gathering and preparing for the markets, the fine fruits of this region, they will always command a premium price in eastern cities. Let it be impressed upon our farmers that they can defy competition in this line of business, just as the southeast can defy competition in cotton. No other part of the United States can produce the fruits which can be produced in abundance here. Grapes, plums, prunes, they can raise, and other fruits raised in the east have an acidity which is taken away by our more sunny climate. Water and sunshine come at the same time.

One cause which hinders the rapid settlement of the fruit region of California, by immigration from the east, is the great difference in the conditions of the country. The eastern farmer is not accustomed to such conditions and such a manner of farming. Coming to California is like going to a foreign country for an eastern man. And the farmer must needs learn the business; hence this region will fill up with population more slowly, but it will fill up surely, for the people all over the United States like the taste of what can be raised here. Our canned fruits and our dried fruits, and by rapid

transit, our fresh fruits, will always sell well in the east, for the farmers there cannot equal them.

In this connection, I would not be true to myself if I did not say a word upon wine making. France is an older country than the United States; she has had larger experience than we have in wine making. Louis Phillippe, King, 1830-48, said that it would be a great benefit to that country, if as vines died out the land could be planted more largely with grain. Poverty reigned when the people were most devoted to wine making; more objects of government charity came from those parts of the country. To manufacture grapes into wine is to convert a good fruit and a wholesome food into a drink which has in it an irritant poison, which the highest medical authority, both in this country and Great Britain, declares has no place in the healthy human system. The most reliable science, the sure testimony of experience, and the most enlightened moral sentiment, all combine to say: *Do not convert grapes into wine.*

The grapes raised on this coast are much sweeter than those raised in the east. This is what makes them superior for food, but when converted into wine the larger amount of sugar makes the wine so much stronger with alcohol. The Board of State Horticultural Commissioners advise that in the adjustment of the tariff the large interest in making raisins receive its due share of attention. In time we can supply the whole country with the best of raisins, as the south supplies it with cotton, and the northwest with corn and wheat.

Our mild Winters are inviting, not only to people who fear pulmonary diseases, but also to sundry insects and pests which injure and destroy our fruit. They can live and prosper in this climate.

The best science of the age, and much skill and industry, are arrayed against them, and they are bound to be conquered. Hon. Webster Childs, of Michigan, realized from his apple orchard an amount equal to the interest on two thousand dollars an acre; and sold his crop at two dollars a barrel. This he did, while most farmers did not count their orchards anything by way of profit.

He selected his trees with the utmost care. It costs no more to raise a good tree than a poor one. When it was young he formed its top to suit him; he wanted it to be an inverted tripod—three good branches radiating from the branches of the trunk. When grown and laden with fruit, one man could pick many barrels of apples in a day, and *his* orchard was a source of large profit.

He explained to me how three men in the western part of the State, owning land on Lake Michigan, and very much separated from other farms, raised apples without any worm holes in them. They learned the habits of the insect, where he was born, where he lived while very young, what were his movements when he waked to activity, which way he traveled, and what accommodations he wanted on his journey from the heart of the apple down the tree to the ground.

They set a trap for him in the shape of an inviting, soft, protected stopping place, consisting of rags wound about the trunk of the tree. The insects invariably stopped at these places. They could not get over them. They put up there for awhile; this place suited them; since coming out of the apple they felt the need of a little protection; they rather liked their ragged home; they would stay quite contented for a few days. And the owner came round every few days and destroyed them. Thus, one generation after another was cut off, till

the race perished from these three farms, and the fruit from them commanded a premium in market.

A similar method used in this State by Mr. Cooke, in 1880, has proved successful, as reported by the Commissioners in their report of 1882. What these men have done others can do, and will do; such examples are sure to be imitated; we all like apples without worm holes. From a little foolish practice when a young man, I know that tobacco is not good for me; neither is it good for the woolly aphid; wash off this pest with tobacco juice of a certain dilution and temperature, and he will not live to come again.

Pests have been multiplying, and the price of fine fruit has been advancing. Professor C. H. Dwinelle says, B. S. H. C., p. 14: "Foreign markets have been secured, where our products are highly appreciated; and climate disasters have fallen upon other producing regions, which have reduced the world's supply of choice fruit. Methods of culture and desirable varieties are much better understood than formerly, so that it is comparatively easy to secure good crops of profitable fruit. The greatest dangers are from insect enemies. It is known that most, if not all, of these can be mastered by vigilance and industry. The important question now is, 'Who are to be one's neighbors?' A few orchards can breed insects as fast as the most energetic can kill them. Concert of action is necessary. The increased study of entomology will secure this result."

The labors of such men as Cooke and Dwinelle and others, in the field and in the lecture room, will become more and more highly appreciated. The life and history of all these injurious insects are becoming more fully known. And insects (as the ichneumon flies) can be arrayed against insects; and these useful creatures are commending themselves to the study and care of fruit raisers.

When people learn that old boxes have their cracks and crevices supplied with the eggs of these pests, they will not want them, at least till they have been thoroughly cleansed, which can easily be done. It is true that the price of the fairest fruit will be much vigilance, but the fruit will be worth the cost. It is a feast for the eyes, and delicious to the taste, and will bring money to the producers.

A few years ago many orchards about San José were so badly infested that property owners were in haste to sell at very low figures; but the leaders in the war against pests went to their relief. "That region is now noted for the clean condition of its nurseries." (C. H. D.) A general exchange of boxes at great fruit markets is a good way to exchange insects all over the country; no man knows what variety of insect eggs he has brought to his ranch. In due time they will hatch and multiply wonderfully.

The woolly aphid has destroyed the apple interest in some localities; they have made it unprofitable. They work on the roots as well as on the branches. By vigorous appliances this pest can be destroyed; and a stock has been found upon which this insect so far is not working. This may prove a valuable discovery. Refuse tobacco, well steeped, one pound to the gallon of water when made, and reduced by two or three times as much water before using, and at a temperature of about 130 degrees, makes a good wash for this pest.

Mr. W. B. West, of San Joaquin District, reports successful war upon the red spider. (B. S. H. C., pp. 20, 21.)

Mr. Felix Gillet, Commissioner of El Dorado District, thinks that ichneumon flies may be hurled against the codlin moth with success,

and recommends raising them by the million to destroy pests; and that the whole subject of insect warfare be more thoroughly studied; and is confident of ultimate success. He also relates how the beetle called lady-bird (*coccinella*) will clean out cabbage lice. Mr. Gillet well says: "It is not so much the anatomy of the insect that we want as its habits," for our aim is to kill them, no matter what their anatomy may be.

There is, then, wealth in these hills and beautiful valleys, and in this favored climate. The increase of intelligence, and the stimulant which will be given to industry by the demands for these fine fruits, will win victories for wealth and happiness.

The whole science of entomology is commending itself in a practical and useful way to the best minds, and to our most thrifty and enterprising citizens. And it should be a matter of care and coöperation by all the people to promote in every way the most thorough and practical knowledge of this whole subject. The permanent prosperity and wealth of the county will depend upon the success with which these pests shall be treated, whether or not they shall be exterminated. We can depend upon the mountains, the ocean, and the sun and the soil. With some variation, from year to year, now cooler, now warmer, in general our climate will remain unchanged. These favorable conditions will continue. The only question is: Can we conquer these minute but numerous enemies. No other part of the United States can compete with us in raising many of the fine fruits. Every individual is interested in this subject; all branches of business feel the failure of the fruit crop, and all will feel the benefit of an abundant year. We have a motive for vigilance.

Then we have another source of wealth, hitherto and still regarded as the greatest—*our mines*, our minerals. The soil will last longer than the mines, but the mines will doubtless outlive all of us; generations to come will find gold in these everlasting hills. In this our county we count mines by the score, and their aggregate yield runs up among the millions. One industry helps another. The yield from the gold mines buys fruit for miners; mines thus keep up a market for the product of the rancher (fruit), and long before the mines are exhausted the hillsides and valleys will be crowned with plenty by reason of faithful and improved care and cultivation. Then we have other mines and useful minerals almost without number. Spend an hour with our friend Mr. E. M. Smith, of Coloma, at the west end of this hall, and one is deeply impressed with the wonderful mineral wealth of this county. Gold is found in more than twenty combinations. He tells me of a locality where, in going three miles, one may see platinum, gold, silver, iron, copper, quicksilver, and tin. We need not go far to find chrome, asbestos, soapstone, marble, slate, isinglass, and the best of building stone.

In time all these useful materials will be brought out and marketed. Think how many, and what a variety of industries will be developed to make available all these sources of wealth.

Our building stone will find its way by rail to larger cities; our marble will supply enduring ornaments to our homes; our ochres will lay the foundation of permanent paints; our lumber will find a wider market. Indeed, one knows not where to stop in enumerating the resources of wealth and the prospective industries of this county. Many, now in their infancy, will grow to proportions now scarcely dreamed of.

One thing of late years has pleased me very much, the increase of *self respect* among the cultivators of the soil. Though that occupation has not been the business of my manhood, I was born on the farm, and for several years the only money I earned was in following the plow. I would not be afraid to compete for a straight furrow to-day. Hence I naturally took to the Grangers. They honored me with the chaplaincy when the Grange was organized in our town. I saw in that society a bright future for farmers, husband and wife, son and daughter. And in a few months, no city society could number as many good singers, or more sensible speakers, or a better looking company of ladies and gentlemen than the Grange. Farmers have a greater number of important subjects to talk about than merchants or mechanics. They have occasion to consult more books, and during all the year have more time to read them than the shopkeepers. The farmer's son is less confined than the clerk; and when with talents and education, the political weathervane points in the right direction, the farm is quite a good place from which to go to the Legislature or to Congress.

If I could say or do anything to improve and add interest and attractiveness to this annual exhibition I would gladly do it. May I suggest one thing, that we sing its praises, in song give glory to Him who makes such an exhibition possible; who built these mountains; who veined them with gold and silver; who gave these metals their fineness and quality; who created the sun, without whose light and heat darkness and death would reign supreme over all the land; who created these fruits; who flavored them to man's taste, making them so delicious; who formed and fashioned the horse in his majesty and beauty and strength, and made him man's servant; who gave us sheep and cattle. Think how generally we are united in what answer we should give to these questions. How little of real atheism there is in the minds of the people. Is it wise or fair to rule God out from an agricultural and horticultural exhibition? The grandest music ever written was composed in honor of God. The most celebrated melodies of all antiquity were the songs of Zion. Many nations were curious and eager to hear them. These songs all honored God for his works, and praised Him for His wonderful works. All classes of religionists could join in this exercise. Atheism has little place in the thought of the American people.

But if we would put God in the place of honor we must do what we can to put away what dishonors him—all forms of betting and gambling.

Then let us introduce a real harvest home exercise. We have the fruits and minerals here before us. The sight of them fills our minds with admiration. There are words and music to give the sublimest expression to this admiration which we all feel. We have the players upon the instruments with us. We are delighted with their liquid music. Let also the singers come here, all the players upon instruments, and all the singers, and let all the people praise God for the gold and silver and precious stones, and for the grains and the fruits. We feel like it. This is the time and place to do it with the grandest effect. Such an exercise might become one of the great attractions of the occasion. Thousands would enjoy it, and all who should enjoy it would be benefited by it. It would be the true climax, the fitting culmination of this exhibition of man's skill and industry, and of the wonderful works of the Almighty.

PREMIUMS AWARDED—1884.

FIRST DEPARTMENT.

Live Stock.	Name of Owner.	P. O. Address.	Name of Animal.	Award.
CLASS I—HORSES—THOROUGHBRED.				
Best three years old and over	Hi. Barton.	Latrobe	Jennie B	\$15 00
CLASS II—HORSES—GRADED.				
Best stallion, three years old and over	John Dennen	Grass Valley	Doncaster	\$10 00
Best stallion, two years old	W. R. Tong	Placerville	Victor E.	\$7 50
Best gelding, three years old	Thompson Davis	Plymouth	Scampertown	\$5 00
Best colt, under one year	W. R. Tong	Placerville	Robert Redd	\$2 50
Best stallion, one year old	T. Davis	Plymouth	George Howson	\$5 00
Best gelding (special premium)	P. B. Hogan	Placerville	Ringgold	\$5 00
Best mare, three years old and over	M. Heffrin	Lone	Emma	\$10 00
Best mare, two years old	P. B. Hogan	Placerville	Jessie	\$7 50
Best mare colt, under one year	W. R. Tong	Placerville	Lucille	\$2 50
CLASS III—HORSES OF ALL WORK.				
Best stallion, three years old and over	Hi. Barton.	Latrobe	Tom	\$5 00
Best gelding, three years old and over	W. Hendrix	Placerville	Charlie	\$5 00
Best gelding, two years old	J. J. Miller	Placerville	Brigham	\$3 00
Best gelding (special premium)	C. D. Boyden	Lincoln	Bingo	\$3 00
CLASS IV—ROADSTERS.				
Best gelding, three years old and over	J. C. Brewster	Latrobe	Nemi O	\$5 00
Best gelding, two years old	Charles McDonald	Placerville	Reliance	\$3 00
CLASS V—DRAFT HORSES.				
Best three years old and over	C. Halverson.	Routier's	Oteel	Diploma.
CLASS VI—CARRIAGE HORSES, ETC.				
Best saddle horse	G. L. Blakeley	Placerville	Prince	\$2 00

SWEETSTAKES.					
Best stallion, any age or breed	J. Dennen	Grass Valley	Doncaster	Diploma.	
CLASS I—THOROUGHbred CATTLE.					
Best bull, two years old and over	G. B. Bailey	Placerville	Dick	\$7 50	
GRADED CATTLE.					
Best cow, three years old and over	W. Hendrix	Placerville		\$10 00	
Best cow, one year old	W. Hendrix	Placerville		\$5 00	
CLASS I—HOGS.					
Best breeding sow, two years old and over	J. Scott	Placerville	Poland China	\$5 00	
POULTRY.					
Best lot (trio) Plymouth Rocks	T. Clifton	Placerville		\$2 50	
Best lot (quintet) Brahmas	A. Hale	Placerville		\$2 50	
Best lot (trio) Silver Spangled Polands	W. W. Stone	Placerville		\$2 50	
Best lot (trio) Bronze turkeys	T. Clifton	Placerville		\$2 50	
Best lot (trio) Crested ducks	T. Clifton	Placerville		\$2 50	
Best lot (trio) Rouen ducks	T. Clifton	Placerville		\$2 50	

SECOND DEPARTMENT.

Exhibitor.	P. O. Address.	Article Exhibited.	Award.
CLASS III.			
Wm. Johns	Greenwood	Iron harrow	\$3 75
N. Wonderly	Placerville	Hay press	\$3 75
Jacob Lyon	Placerville	Peach and plum pitter	\$1 50
CLASS IV.			
E. A. Boles	Placerville	Gale chilled plow	Diploma.
E. A. Boles	Placerville	Star Moline No. 5 plow	Diploma.
E. A. Boles	Placerville	Star Moline No. 4½ plow	Diploma.
CLASS V.			
N. Wonderly	Placerville	Four-horse wagon	Dip. and \$5 00
N. Wonderly	Placerville	Two-horse carriage	Dip. and \$5 00
E. A. Boles	Placerville	Two-horse wagon	Dip. and \$5 00
E. A. Boles	Placerville	Thoroughbrace wagon	Diploma.

THIRD DEPARTMENT.

Exhibitor.	P. O. Address.	Article Exhibited.	Award.
CLASS I.			
J. W. Dench	Placerville	Double team harness	\$2 50
J. W. Dench	Placerville	Single team harness	\$2 50
J. W. Dench	Placerville	Bridle	\$1 00
CLASS II.			
J. W. Dench	Placerville	Best lady's saddle	Diploma.
CLASS IV.			
Mrs. J. I. Reed	Placerville	Best exhibit upholstery	\$2 50
CLASS V.			
Joseph Miller	Lake Valley	Best exhibit cooper work	\$2 50
CLASS VI.			
Leonard Reeg	Placerville	Best exhibit roofing slate	\$2 00

FOURTH DEPARTMENT.

Exhibitor.	P. O. Address.	Article Exhibited.	Award.
CLASS I.			
Mrs. Wm. Hendrix	Placerville	Best comforter	\$2 00
Miss Mary Kelly	Kelsey	Best leaf and moss work	\$1 00
Mrs. G. E. Morey	Placerville	Best lamp stand mat	\$1 00
Mrs. G. E. Morey	Placerville	Best cotton embroidery	\$2 50
Mrs. G. E. Morey	Placerville	Best lace table cover	\$1 50

FOURTH DEPARTMENT—Continued.

Exhibitor.	P. O. Address.	Article Exhibited.	Award.
Miss Lena Hunger	Placerville	Crazy quilt	Sp. pre. & \$1 50
Mrs. O'Donnell	Placerville	Best hearth rug	\$1 00
Mrs. J. J. Crawford	Placerville	Best silk embroidery	\$2 50
Mrs. J. Kirk	Placerville	Best patchwork quilt	\$2 50
Mrs. E. W. Witmer	Placerville	Best ottoman cover	\$1 50
Mrs. E. Giamboni	Nashville	Best pair knit cotton stockings	\$1 00
J. R. Caldwell	Placerville	Best home-made candies	\$2 50
Miss Dora Culbertson	Placerville	Best silk quilt	\$2 50
Miss Mary Hunger	Placerville	Best hair work	\$1 00
Mrs. J. A. Sigwart	Placerville	Best needlework picture	\$1 50
Mrs. P. J. Isbell	Placerville	Best knit woolen stockings	\$1 00
Mrs. J. I. Reed	Placerville	Best Angora rug	\$1 00
Mrs. J. I. Reed	Placerville	Best Angora robe	\$2 00
Miss Sophia Ring	Placerville	Silk embroidery	Special mention.
Miss Sophia Ring	Placerville	Best worked handkerchief	\$1 50
Mrs. Carrie Thraillkill	Auburn	Sofa cush. & Kensington picture	Special mention.
Miss Sophia Ring	Placerville	Best linen embroidery	\$2 50
Miss Maggie Knights	Placerville	Best ornamental needlework	\$1 50
Miss Susie Lowry	Placerville	Crochet slippers	Special mention.
Miss Maggie Knights	Placerville	Best rococo ribbon work tidy, etc.	\$1 50
Mrs G. E. Morey	Placerville	Knit slippers	Special mention.
Mrs. F. Engesser	Green Valley	Tarlon wreath and cross	Sp. men. & \$1 00
Mrs. S. J. Alden	Placerville	Crochet work	Special mention.
Mrs. Jas. Lyon	Placerville	Best worsted wreath	Sp. men. & \$1 00
Mrs. Jas. Lyon	Placerville	Cardboard cross	Special mention.
Miss Sophia Ring	Placerville	Sofa pillow	Sp. men. & \$1 00
Miss Tracy Gottsch	Diamond Sp's	Best braidwork	\$1 00

ADDRESS.

DELIVERED BY E. W. MASLIN, ESQ., OF SACRAMENTO, AT THE FOURTEENTH ANNUAL FAIR OF THE EL DORADO DISTRICT AGRICULTURAL ASSOCIATION, NO. 8, AT GRASS VALLEY, SEPTEMBER 5, 1884.

THE SIERRA FOOTHILLS — SOIL AND CLIMATE AND ADAPTATION TO FRUIT AND GRAPE CULTURE.

MR. PRESIDENT, LADIES AND GENTLEMEN: An agricultural address is a very pleasing production. It is rarely listened to and more rarely read. A few lines from Virgil, some happy quotations, the usual assertion, notwithstanding that Cain was a farmer, that "agriculture is the base of civilization," a little advice to farmers, some poetry at the close, and the thing is done. When I received the invitation to address you, I began to collect my quotations and poetry, but a gentle hint from one of your Directors, who is a practical farmer, that such an address would not be tolerated, constrained me to take the path indicated by him, and if I am tedious, I intend to lay the blame upon him, for I fear that, before I close, you will find I have only told you what you already know.

I therefore beg your indulgence for the few facts which I shall lay before you, premising that they were hastily gathered amid the engrossing cares of my official duties, which at this time are especially onerous.

I think myself happy to appear before you to-day, among so many of the friends of my boyhood. I shall be much more happy if I can say anything which shall encourage you to renewed efforts to place this district, and especially this county, in the van of material progress.

More than thirty-three years ago I set foot here, a beardless boy. All was then excitement and life. I have lived to see three of them, and for more than a decade, most populous and wealthy counties of the State—El Dorado, Placer, and Nevada—decline until they now occupy in the same relation only the twentieth in a scale of fifty two.

A more beautiful scene never greeted my eye than that which I witnessed on the morning after my arrival. A lovely valley, covered with a luxurious growth of native grasses, stretched away to the east the hills were crowned with majestic pines, a creek ran pellucid by the town, the air was balmy and bracing, and the rich soil, the abundance of water, the vegetation so luxuriant, the incomparable climate, and all conditions invited to the natural use of the fertile soil with which the Creator has blessed this county. How changed the aspect in a few years! The hills were denuded of their trees, the valley was ravished of its beauty, the stream ran turbid, the very winds, once warm, were cold in their embrace.

But we came for gold, and gold we must have, and no place was

too beautiful, no soil was too rich, to save it from the miner's pick. I did my share of the work of spoliation, and shall take my share of the shame. For thirty-five years the inhabitants of Nevada, El Dorado, and Placer have pursued principally the vocation of mining. They have extracted millions upon millions of gold. Where is your glittering prize? I will tell you: the farmers have got it. You have toiled and sown, but they have reaped.

Suppose that thirty years ago one had been asked, what will be the future of the counties named. Here, would say the questioner, are thousands upon thousands of brawny men, of cultivated intellects, of the best blood of the land, firm of purpose, fertile in resources, able and willing to dare and do, and eager for wealth. Here are millions upon millions of gold only awaiting the sesame of labor to be the slave of man. He who thus would be questioned, if unacquainted with the fate of mining countries, would have replied: "Gold you will get, the world wants gold, and you can buy the world with gold. Property must increase in value, your counties will be densely populated, your gold will go to the uttermost parts of the world, and the riches of Indies will be yours, wealth will induce culture and culture foster intellect, the mining counties will rule the State, and the toilers of the valleys will be the slaves of the lamp to supply your every desire." Who would at that date have questioned the truth of the prophecy? Has it been fulfilled? Alas! no. You have been like "the nightingale that leans its breast against a thorn and sings in pain." You have sung your golden notes to enchant the world, and little else remains to you but memory. But I will no longer permit memory "to blend with the twilight charm and bear us back to other days."

I wish to show you a better way. I am not here to pronounce a panegyric upon agriculture; that has been done by many a more able and eloquent tongue than is mine. I am here rather to awaken you to a keener perception of the wide and inexhaustible resources of this district, and to point out to you how you can regain your vantage ground. I hope you will pardon the last expression. The man who lives on Shasta cannot see the mountain. Only the dweller in the valley sees that grim peak in all its grandeur of dimensions. And so having lived among you and now dwelling in the valley, I do not think it ill becomes me to return and tell you of the beauties and possibilities of your mountain slopes.

I firmly believe that the tide has now come to you at its flood, which, if taken, will lead you to a fortune, and that the first generation of pioneers shall not pass away until it shall see this district among the first and wealthiest portions of the State.

To those of you who still cling to the belief that mining is the first industry of the State, I would invite you to a comparison between the counties of this district and certain other counties devoted mainly to agriculture. I know of no more acceptable mode to show you the true path to wealth and of progress. I hope no one will be offended at the comparison.

I select these counties because they are not strictly horticultural counties, and because they occupy the lowest scale in intelligent, wealth-producing, energizing agriculture, to wit: that of grain growing.

The assessment of property began to approach a uniform and equal standard of valuation after the passage of the Political Code, and I

therefore take the year 1872 as a year of comparison with 1882, a period of ten years.

The following is a table showing the assessed valuation in 1872 and 1882 of the Counties of Nevada, Placer, El Dorado, Butte, Colusa, Stanislaus, and Yolo:

	1872.	1882.
Placer	\$8,146,336	\$4,912,37
Nevada	8,041,468	6,737,54
El Dorado	2,431,757	2,806,25
Butte	7,871,374	11,617,83
Colusa	8,545,927	16,982,31
Stanislaus	7,105,963	10,141,14
Yolo	8,721,402	12,490,69

We perceive that in ten years Placer decreased in valuation 40 per cent, Nevada decreased 16 per cent, and El Dorado increased 11 per cent, while Butte increased 47.6 per cent, Colusa 98.7 per cent, Stanislaus 42.7 per cent, and Yolo 43.2 per cent.

Take another view: What has been the man-power during ten years in the above named counties? In other words, what has been the average production of wealth, retained in the county and not exported, per man of the male population over twenty-one years of age?

I take the census returns of 1870 and 1880, as I cannot obtain the figures for 1872 and 1882, but for our purpose the first named years are sufficient.

The male population over twenty-one years was as follows:

	1870.	1880.
Placer	6,122	6,700
Nevada	9,338	9,040
El Dorado	5,163	5,130
Butte	5,828	9,050
Colusa	2,657	5,630
Stanislaus	2,773	3,710
Yolo	4,049	4,320

The wealth created per capita, and retained in the county, is in Placer and Nevada nothing. In El Dorado \$72 72, in Butte \$503 52 in Colusa \$2,035 07, Stanislaus \$934 05, and in Yolo \$900 35.

Ladies and gentlemen: There is a little gleam of light in this woefully dark array of figures, of which we may well be proud.

Of the number of children in 1880 between the ages of five and eighteen, El Dorado had 2,390, Colusa 2,953, Placer 3,087, Yolo 3,078, Butte 4,000, and old Nevada 5,192. We rest our laurels on child production.

While the agricultural counties were thus increasing in store, what were we doing? Sending out a stream of gold such as history furnishes no parallel. From 1848 to 1881, California produced \$1,115,000,000 of gold, of which \$18,301,828 was produced, according to the late census, in the year 1880. Am I far wrong when I estimate that El Dorado, Nevada, and Placer produced one third of the latter sum?

Eighteen millions of wheat! what does it not represent? Railroads, steamers, warehouses, busy marts, cities, homes, factories, churches, school houses, and all the refinements of civilization. Eighteen millions of gold leaves little to those who by toil produced it. It has always been thus, and always will be so. The money has moved the crops, built the railroads, cultivated the fields, enriched the farmer, in lands to which it was alien by birth, but how little has its potentiality benefited you.

The auspicious time has come to you, when all conditions favor a change in your vocation, when you can arrest the flow of the golden stream, and with it fertilize these waiting hills, and crown them with choicest fruits of the earth.

These figures are more eloquent than figures of speech to depict the relative advantage of agriculture over mining, and now, having, I hope, aroused your interest in the subject of agriculture, I wish to devote some time to an enumeration of advantages your section offers for the cultivation of fruit. The question of transportation has determined that your efforts must tend to the cultivation of fruit rather than grain.

THE CLIMATE

Is the first consideration. In the coast range there are a thousand climates, dependent upon the course of the cool winds which blow from the ocean, and the shelter which projecting points or a rising hill affords. Each section, therefore, has some fruit in which it excels. In the great valleys, oppressive heats occur in midsummer, to be followed by too cool nights, while in those sections to the south near the base of the Sierra, frost is apt to occur late in the Spring and materially decrease the crop.

In the foothills of the Sierra, at an elevation of from three hundred to three thousand feet, the climate is about the same at corresponding elevations, being genial in Summer and favorable to outdoor work, while the nights are not too cool, and are sufficiently warm to encourage the continuous growth of vegetation. To those who have never experienced the superlative charm of our foothill climate, a statement of the temperature both of Winter and Summer may be interesting.

I have no data in relation to El Dorado and Nevada Counties, but as Auburn has an elevation of one thousand three hundred and sixty feet, Colfax two thousand four hundred and twenty-two feet, Grass Valley about two thousand two hundred feet, Placerville about two thousand six hundred feet, and Rocklin, which represents the base of the foothills, two hundred and fifty feet, I have taken Auburn and Colfax as representing the temperatures of Grass Valley and Placerville, and Rocklin as corresponding to the temperature of other places of the same elevation.

The yearly mean of the maximum temperature of Auburn is 83.17, Colfax, 85.42, and Rocklin, 84.83.

The yearly mean of the minimum temperature of Auburn is 39.33; Colfax, 41.50, and Rocklin, 42.17.

The climate which these figures indicate the foothills to possess, establish beyond a doubt that there is ample heat in Summer to bring to maturity even tropical fruits, and cool enough in Winter to secure the rest which vegetation needs without endangering its existence.

You have a still further advantage in being generally exempt from

Spring frosts which do so much damage to the vineyards and orchards in the valley and coast portions of the State. April and May are the months most to be feared.

In the foothills the lengthened Winter retards the growth of the bud, and when the frost comes, if it does come in April and May, the buds are not advanced enough to be hurt thereby.

The minimum temperature in April and May respectively at Auburn is 32 and 41; at Colfax, 33 and 40; at Rocklin, 46 and 50. These temperatures indicate an almost entire exemption from destructive frost. Not that the dew point is lower than 32, but that the vegetation is not advanced enough for the slight frost to do it any damage. Even the famed Napa Valley has a minimum temperature in April and May of 34 and 45, but the vegetation in that beautiful valley is at least, each year, a month in advance of that at Auburn and Colfax, and hence more liable to the ravages of frost.

Finally the mean temperatures of April and May are at Auburn respectively 50.55 and 59.01; at Colfax, 49.34 and 56.61; and at Rocklin, 59.24 and 66.88.

But you need not fear frost. Mr. Haraszthy, a most competent observer and viticulturist, testifying before a committee on "Grape Culture," in 1880, said as follows:

"We have no severe frosts in this country. If a frost comes it diminishes our crop only in part—five or ten or twenty per cent according to circumstances. In France they will have one frost after another until the entire crop is destroyed. This is one of the many advantages possessed here."

Mr. Mathews, a member of the committee, asked: "This land you speak of lies mostly in the foothills, does it not?"

Mr. H.—"Yes, sir."

Mr. Mathews.—"Is it not a fact that they have earlier and heavier frosts in the foothills?"

Mr. Haraszthy.—"No, sir; it is just the reverse. There are lands on the sides of our mountains where goats would starve that will produce the best wines."

The above figures present to the acute observer and searcher for propitious land for fruit culture, more than can eloquent description or rhetorical display, our incomparable climate. To the eastern or western man, accustomed to the icy rigors of long Winters and the melting heats of Summer when the "grasshopper is a burden," our climate is a revelation and a foretaste of an earthly paradise.

Here there is no malaria to deaden one's energies, no fevers to prostrate, and no consumption; here, if anywhere, life should be lengthened to the scriptural span.

THE RAINFALL

Is ample for the cultivation of all fruits except possibly berries. At Sacramento the average fall is about twenty inches, at Rocklin twenty-three, at Auburn thirty, and at Colfax forty inches.

This brings me to the subject of irrigation. It is a bugbear. Somehow the impression prevails in the valley that irrigation is necessary. Nearly every one to whom I have spoken about the foothills, replies: "But you have to irrigate." And this in face of the most incontestable testimony of the scores of vineyards in our district which never had a drop of water save that which fell from the heavens. The

doubters are not confined to the valleys. Those who started vine yards and orchards in the foothills by irrigation still adhere to the practice; it would be death to let go and so they keep on irrigating.

Irrigation, I repeat, is not necessary, but cultivation is. The use of cultivation is to put, as it were, a blanket of non-conducting fine soil on the top to prevent evaporation of the water which the soil has absorbed in the Winter season. By plowing in the Winter, where the land does not wash, you get all the rain which falls, and by cultivating in the Summer you keep it in for the thirsty vine and tree roots to drink as their necessity demands.

To the doubter I wish to relate my experience. Perhaps there is no drier-looking portion of this district than that about Loomis, in Placer County. The soil is granitic, about four feet deep; underlain with rotten granite; the elevation four hundred feet above the sea. I plowed and subsoiled my land in the Winter of 1881 and 1882, and in April, 1882, which was a dry season, the grape roots (*Vitis Californica*) were planted. The stocks were not over one eighth of an inch in diameter. They have never been irrigated. When I grafted them in April of this year the stocks were from one inch to two and one half inches in diameter. The canes of the grafted scions have made a growth of three to six feet, and, had I not cut off the blossoms would have borne a handsome crop. Mr. Morrison, Mr. Williams and Mr. Ryder each set out this Spring an orchard, at Loomis, of prunes, pears, apricots, figs, walnut trees, and peaches. The doubters went by wagging their heads and saying, "Wait till the clouds pass by."

The clouds did pass by, and at this present moment the trees are living and clothed in the bright green of health, all without one drop of water of irrigation. Mr. Costa and Mr. Himes have each a vineyard near by which bears abundantly without the aid of irrigation. Mr. Filcher, of the *Herald*, has also been successful in growing corn and melons without irrigation, and Mr. Whitcomb, at Colfax, who produced the largest clusters of grapes ever exhibited in this State, cultivates his vineyard without the aid of water.

I have introduced my neighbors' names and my own into this statement, because I wished to state simply what I knew, and I have dwelt with some prolixity upon the question of irrigation, because it is the one question of this district which shall determine our future as a fruit-growing section. It should be determined once for all that trees and vines will grow in the foothills, and that they will bear abundantly enough to satisfy any but the most greedy. Let not the new comer be afraid; let him plant with faith. Heaven's bounty is enough for him if he but cultivate his land.

SOIL.

Much of the exquisite flavor which characterizes the fruit of the foothills is due to the nature of the soil. It is deficient in the elements which produce an excess of wood, but abounds in mineral substances which enter into the composition of fine fruits.

My remembrance is that about Placerville the soil rests on slate, tilted and seamed, into which the vine and the roots find ample moisture and food. As you go north and west you enter the granite belt, in which is located Coloma, famous now and for years past for the peaches grown there, which, for size, juiciness, and flavor are not

excelled, if equaled, in the State. The soils of Green and Garden Valleys have no superior in the State in adaptability to fruit culture.

In Placer County there is a section of granite soil which begins below Rocklin and extends north to Auburn, and in width extends from a mile west of Rocklin eastward to the American River, and contains about four townships of land, say at least 70,000 acres of land.

In this section lie the Towns of Rocklin, Pino or Loomis, Penryn, and Newcastle, all developing into extensive fruit cultures.

Further to the north, beginning at Auburn, is the slate belt, extending to Colfax and to Bear River, the dividing line between Placer and Nevada Counties. The sections named are divided in Placer County by a ridge composed of boulders, from the farming lands proper of Placer County, which contain the wealthiest portion of the population of Placer.

After crossing Bear River you enter into Nevada County. The soil from there on to Grass Valley is volcanic, and the substratum, trap, slate, and syenite. In the southern part of the county, lying between Bear River and Wolf Creek, is a section of land which, in my judgment, is not excelled in the State for the production of wine grapes. The soil is red, slaty, and mixed with quartz pebbles, and easily tilled. The climate is even and mild; no snow falls there, and it is peculiarly exempt from frost. What I have seen of the grapes raised there without irrigation strengthens my judgment that the future is full of promise for that section as a wine-producing country. Lack of transportation facilities is the only impediment to its growth, but the railroad will go there if the people have faith and plant their vineyards and orchards.

Much has been said about the red soil as being the best for grape culture. This may mislead many. It is true that red soil is preferable to any other, but only because of the presence of oxide of iron, which is an essential element in the production of a deep and permanent red color in wine. In all the foothills there is sufficient iron for the maturity of fruit, and white wine can be made from grapes grown on any colored soil. The only question in the production of a good and transportable wine is the right kind of grape on the right soil.

And this brings me to the question which is uppermost in the mind of every man engaged in tilling the soil of the foothills: What shall I plant? The time allotted me is not sufficient to state fully all the reasons which induce me to believe that eventually the grape must be the principal product of the foothills, and of the grape such as are commended for wine.

Transportation and nearness to railroads must always determine the character of the productions of a country.

Wine will bear a longer distance of carriage to a railroad than any other product of the farm, and is better able to bear the cost of transportation to distant markets by rail or sail. The three counties of this district are especially favored by railroad facilities. The Central Pacific Railroad runs through the whole length of Placer County, and at a distance of three miles apart are stations and ample side tracks for the convenience of shippers. Nevada County is connected with this road by a narrow gauge road; and if the southern part of the county should be devoted to viticulture, a railroad from Auburn or Clipper Gap would no doubt be extended to Grass Valley; and even

if a railroad should not be built, the distance by wagon to a shipping point is not more than ten or twelve miles. El Dorado has a railroad from Shingle Springs to Sacramento, and as soon as sufficient encouragement is offered doubtless the road will be extended to Placerville.

No portion of the State is better supplied with the means of transportation than these three counties.

Again, our soil is especially adapted to the culture of the grape. It will bear comparison with the most noted of the soils of France. While it may be very tedious to listen to the tables of comparison, I am persuaded that they will be of interest to you when you come to study the capacity of your soil, and determine the variety of grape to which the soil will be most kindly.

Mr. Haraszthy, in his work on grape culture, gives the following as the analysis of the soil upon which is grown the claret of Margeaux:

Oxide of iron.....	3.341
Alumina.....	1.590
Magnesia.....	.263
Soluble silicates.....	.380
Phosphoric acid.....	.147
Potash.....	1.241
Carbonate of lime.....	.891
Organic matter.....	6.670
Insoluble residue.....	85.427
	<hr/> 100.000

The vine grown on the estate known as the Chateau Lafitte, in the Bordeaux District of France, is conceded to be the best claret of the world. The constituents of the soil of the estate are as follows:

Silicious pebbles.....	62.900
Fine sand.....	28.300
Fine silex.....	6.220
Humus.....	1.280
Alumina.....	.750
Lime.....	4.000
Iron.....	8.600
	<hr/> 112.050

The Burgundy soil has 12.72 per cent of oxide of iron and 12.95 of carbonate of lime.

Prof. E. W. Hilgard, of the University of California, in his report for 1882 to the Regents of the University—a work which should be read by every tiller of the soil—reports two analyses of the soils of Placer County. One from about Auburn and one from Pino or Loomis. The first I should judge was upon slate, the second is upon red rotten granite.

The analyses are as follows:

	Auburn.	Pino.
Insoluble matter- }		
Soluble silica ---- }	69.52	-- { 78.94
Potash38	.65
Soda07	.29
Lime96	.75
Magnesia	1.09	1.28
Peroxide manganese39	.08
Peroxide of iron	12.42	2.30
Alumina	10.97	6.81
Phosphoric acid16	.03
Sulphuric acid01	.01
Water and organic matter	5.14	2.59
Totals	101.11	100.06
Humus	1.14	.51

Professor Hilgard says of the soil of Auburn, that "it is altogether the best of the foothill soils thus far examined (in 1882), having a large supply of phosphoric acid, with plenty of lime, a fair supply of potash, and a high percentage of humus.

"The analysis shows good reason for the high estimate in which this region is held for the production of fruits, grapes, etc."

The soil is a dark orange color, rather light in tillage and pulverulent when dry, forming a very fine reddish dust, of considerable repute.

Of the soil of Pino (now Loomis), taken from the hillside, he writes—

"It is a reddish gray sandy loam, the sand mostly coarse and consisting largely of granitic debris; it should till easily at all times."

"The analysis shows the soil to contain good percentages of mineral plant food except phosphoric acid, of which the supply is quite small. Compared with the red soil around Auburn, this soil contains only one fifth as much phosphoric acid, somewhat less lime, but nearly twice the amount of potash, a circumstance that with the comparatively small amount of humus, low retentiveness, but usually considerable depth, and a substratum of rotten granite, points to its adaptation to the production of grapes. The fig and olive would also do well on the hillside, while in the valleys where both phosphates and humus are doubtless more abundant, and the soil is more retentive, other fruits would thrive. Except as to inferior retentiveness and humus this soil is very similar in composition to that of Vaca Valley, on which cherries flourish."

I deem it proper at this point to note what the Professor says as to the defect of our soil. "It is important to note the frequent deficiency in phosphates that characterizes the soils of many regions in the State, and the importance of an adequate supply of phosphatic fertilizers to the continued prosperity of such districts. Wherever the growth languishes, the use of bone meal should be very effective."

You will perceive that Auburn soil excels the soils of France in phosphoric acid, iron, lime (except the Lafitte soil), and in alumina, the characteristic constituent of clay.

The defect of both the Auburn and Loomis soils can easily and cheaply be supplied when needed by lime, which is manufactured at your very doors, and by bonemeal.

I have my hobby like every other man, and it is to see these foothills devoted to the culture of grapes. We have been delighted in

the past with the eulogiums upon the foothills, but there has so far been but little system pursued in the planting of the proper kind of fruits.

The time has passed for haphazard planting. Given the right soil and the proper fruit adapted to soil and climate, and an independence must be the fortune of the possessor. As a fruiterer said to a friend of mine: "The man who will plant a good keeping apple in the foothills, on line of railroad, will have a bonanza." You must look beyond the market of the State. There are fifty million people who will eat our fruit, in the United States, if we can get it to them cheaply. They will buy our pears, apricots, plums, and grapes, because they cannot in open air or hothouse raise those fruits. We have a complete monopoly of these four fruits. At present the tariff on a carload of fruit from Sacramento to the East is from \$500 to \$900, and many persons are exclaiming that the fruit business will be overdone. My impression is that it has not begun.

I am told that the market now is about equal to the demand, and that forty per cent of the trees planted are not in bearing. In three or four years we shall have more fruit than the home market demands, and more than the dealers will buy. At that point is our opportunity. The railroad company will carry out its own doctrine, that the "service is what the traffic will bear." It will be a good doctrine for us then. The traffic will bear, probably \$300 per carload, and that sum in a few years must be the tariff. The railroad companies are not going to see the fruit wanting a market, and must, out of self interest, come to our rescue.

The valley will probably excel us in the quantity of pears and plums raised per acre, but if they should excel us in the quantity of grapes and apricots, we are more than compensated by the superiority of our fruit.

Can the wine business be overdone? Not while you and I live, provided we make a cheap, and, as Mr. Wetmore says, a "potable and transportable wine." I am able, from the reports of the Assessors to the State Board of Equalization, to state the number of acres devoted to wine culture in the State. Of course these tables are somewhat faulty, and perhaps understate the truth, as, for instance, Placer is stated not to have produced any raisins, when there is a raisin vineyard of two hundred acres within a few miles of Rocklin.

There were planted at the close of 1883, of table grapes, fifteen thousand four hundred and forty-six acres; of wine grapes, sixty-five thousand seven hundred and two acres; of raisin grapes, five thousand nine hundred and seven acres, making a total of eighty-seven thousand and fifty-five acres. The estimate is exclusive of Los Angeles, whose Assessor failed to report. I suppose the true estimate is one hundred thousand acres. Estimating that in time there will be one hundred thousand acres devoted to wine, and the product, at the rate of five hundred gallons per acre, California's yield will be fifty million gallons. This seems immense, but compare this with France alone, which produces two thousand million gallons. Cheap good wine will make its own market, and the taste for it will increase as good morals increase, and people become refined and temperate.

You have along the line of the railroad an advantage over the present vine-growing counties. You are one day nearer the eastern markets. For green fruits this one day in value can hardly be over estimated. One acre in the foothills is worth two of the lower valleys

in the mere matter of facility of transportation. Again, look at the first cost of the land. Naked land in Napa and Sonoma, near a railroad, cannot be purchased for less than \$100, and in some localities such as St. Helena, at less than \$300, while land in the foothills can be purchased at from \$10 to \$30 per acre.

Most of you know the average product of grapes per acre in the foothills, and most of us are accustomed to think that Los Angeles, Napa, Sonoma, and Santa Clara excel us. It will be a surprise to most of you to know that, according to the Assessor's report, the average production per acre of table grapes, the yield of which is larger than wine grapes, in Sonoma, is three tons; Napa, two tons; Sacramento two and one half tons; and Santa Clara, four tons. I am sorry that I cannot give you the yield of Placer, as none of the Assessors reported it. El Dorado reported the yield at three tons. I would like to hear from some of our El Dorado and Placer viticulturists on this question.

I conclude that the soil, climate, nearness to market, railroad facilities, rainfall, pure water, timber, and the superiority of the fruit produced, all combine to make the foothills of the Sierra, and especially the hills of this district, the most desirable section of the State for home, founded upon absolute security of a comfortable independence.

As to the kind of grapes to plant I am not prepared to say. I have diligently studied the question, with the light which the work of Mr. Wetmore and Professor Hilgard afforded me, but I fear to offer you my judgment. But this I can recommend. Do not be in too much hurry; plow and Summer fallow your land, and expose it one year to the fertilizing and ameliorating influence of the air, then plant resistant vines, such as the wild grapevines grown from seeds and *Riparia* seedlings.

You will then be safe from the fatal attacks of the phylloxera, for it has been proved by experiment in France, and in this State, that these vine roots are truly resistant. The insect may visit the district, and while its progress is slow it is sure. In the district below Auburn, in the sandy soil, the progress will be slow, because the soil is sandy, and in such soil the insect cannot travel, but in the more clayey and compact soil he is to be feared.

In two years from planting, graft in the grape desired. The cost of grafting need not exceed five or six dollars per acre.

The advantages of planting the resistant vines are obvious. First the security obtained against the ravages of the insect, and, secondly in the increased product of the vine, as the root system of the wild vine is more vigorous than that of the *Vitis vinifera*, and correspondingly the air growth will be healthier and more luxuriant. The *Vitis Californica*, or wild grapevine of this State, has a tendency to throw down a tap root, and thus find moisture below. Hence, it is perfectly safe to plant this vine on the driest hillside. In my judgment, in ten years from now the sale of a vineyard not grown upon resistant stock will be difficult to effect.

Mr. Haraszthy, the President of the Viticultural Commission, informed me that the future white wine of California would be grown somewhere within the snow line of the Sierra, and this is a hint for our Colfax friends.

The plan I would advise is, for those concerned to write to Mr. Wetmore to make an examination of your district, compensate him for his pains, and when the time comes he will, better than any one in the State, advise you. If you make a mistake all your labor is for

nothing, and perhaps a generation will pass before the error is rectified. For instance, I notice that some are planting the "Mission," simply out of pure ignorance that the conditions of the grape industry have changed in the last five years. Such persons are only obstacles to our progress. I can say this much, however, where the foothills are warm and the grape matures early, plant, for wine, the late maturing kinds, such as the Mataro, Grenache, and Carignan. You cannot make a mistake with these three kinds. If you wish to make a port, try the Trousseau, which the Viticultural Commission say is one of the true port wine grapes.

To you who live in these mountains, who are parents, the thought that accompanies you in your daily toil is: "What shall I do with my boys?" The time has gone by when he can seek in the miner's life, by independent action, his livelihood. Mines, following the example of most industries, are being concentrated in the hands of capitalists, and can only be worked by the large expenditure of capital. Surely the miner's daily life for wages is not an inviting one; neither is it favorable for intellectual or moral culture. The very conditions of the permanency of your homes is not secure. There is always an unspoken dread that the mines upon which the towns and surrounding country depend may at any time fail, and this unrest prevents progress. It drives men from your midst. Look at the list of men who by mining accumulated fortunes in these counties, who have departed to found homes in the cities and valleys of the State. What they sought was permanency, solidity, security. It is yours, then, while your children are growing up around you, to create new vocations and industries that shall entice them to stay within the hallowing influences of their natal homes. It is not alone the material progress of the country which you will thus advance, but you will be laying deep the foundations of good morals and true religion. The man whose mother's eye is upon him is not apt to go wrong, and the pride of a family name is a great conservator of virtue. A home is better than a policeman, and grandmothers are better than laws.

Now, the want in this State, and a want that will in ten years be more forcibly felt, is a corps of intelligent men scientifically trained in the culture of fruit. The man who simply knows how to plow must give way before the educated farmer. Fruit producing will soon be an art; the adept must be a student, and his vocation elevated to the dignity of a profession. He must be an entomologist, a chemist, a naturalist, a student of vegetable physiology—in fine, an observing scholar. Your boy, educated as he should be for the vocation of a horticulturist or viticulturist, will come back to you as a giant. He will no longer be a plodder, or find his highest ambition in being a clerk, or lawyer, or doctor. He will know that he has the forces of nature at his command, and command them he will. These hills will glow with the fervor of his energies. He will find in these foothills the richest field for his efforts. He will not be a tradesman. He will have smelt the clover's bloom, and, like the contending men with the gods, when wearied he must embrace the earth. He will build himself a home; here he will stay and set up his rest, his altar, and his fires. He will be with you to close your eyes at your latest day, and his children shall call him blessed.

Choose, therefore, that your sons be educated to till the soil. I do not mean, to learn the mere manual labor of a farm, but educated in a higher sense. Brain is manure nowadays. Learning is a fertilizer. Send such as you can spare to the University. If your public schools

do not afford at least the primary education to fit your sons for entry into the Agricultural Department of the University, see to it that the curriculum is enlarged. The University now offers almost every facility for the education of young men who intend to follow farming, and especially fruit growing.

It is doing a noble work. Its professors are analyzing soils, classifying lands into sections suitable for special fruits, advising all inquirers, experimenting at their gardens with plants and trees from all parts of the globe, distributing seed, and with marvelous zeal are stimulating a genuine love of rural pursuits.

In the past five years it has repaid to the State by the aid it has extended to farmers, orchardists, and vineyardists, more than its whole cost. I bespeak for the University your fostering care. This Winter your representatives will assemble at Sacramento in the Legislature. The University may need an appropriation to enable it to carry on its agricultural department. I know that Professor Hilgard is already hampered by want of means, and I hope your Senators and Assemblymen will stand ready to vote such an appropriation as is necessary to enable the University to enlarge its field of usefulness. It will be good seed sown on good ground and will yield to you an hundredfold.

My friends, long since I dreamed a dream, and still I dream. I am the son of a farmer, "proud of his field lore and harvest craft," and my dream was as is of a farmer's mountain home. For me now I doubt if it is to be, but my vision is of those who shall come after me and people these mountain slopes.

For the young men, for your sons, who are stirred by ambition's rage, the richest possibilities lie within their reach. Here are the mountains to enlarge their natures and quicken the imagination; here a pure atmosphere, the very inspiration of energy; here a soil responsive to solicitation, and which will return of ministering love a thousandfold.

They will have inherited from you your rugged virtues born of pioneer struggles, your courage and endurance, and learning and culture will add luster to their lives. They will be as Whittier says: "Men to match their mountains, not to creep dwarfed and abashed below them." The slopes will be gracious with festooning vines bearing purple grapes whose juice will make glad the heart of man.

But the bravery of California will be the homes, the hallowed homes, that shall be set as gems in the Sierra, the coronet upon her brow.

There will be no acres broad to separate and chill the impulse of hospitality, nor wide domains to nurse luxurious pride, but brother linked to brother man by common aims and equal lot, shall make religion of honest toil until Sierra shall blossom as a rose, and seed time, and harvest, and virtue, and faith, and love shall never fail.

The Golden Age must come. The eye that looks for it, the faith that endures for it, the heart that believes in it, are already at its threshold. Let each of us pray with Whittier:

"O! Golden Age, whose light is of the dawn,
And not of sunset, forward, not behind,
Flood the new heavens and earth, and with thee bring
All the old virtues, whatsoever things
Are pure and honest and of good repute,
But add thereto whatever bard has sung
Or seer has told of when in trance or dream
They saw the happy isles of prophecy!"

PREMIUMS AWARDED—1884.

FIRST DEPARTMENT.

LIVE STOCK.	Name of Owner.	P. O. Address.	Name of Animal.	Award.
CLASS I—THOROUGHBREDS.				
Stallion, two years old	Webster Emory	Grass Valley	Jay Gould	\$7 50
Stallion, three years old	Towie Bros.	Dutch Flat	Nick of the Woods	Diploma.
Stallion, five years old	G. L. Richardson	Grass Valley		\$15 00
Mare, three years old	Webster Emory	Grass Valley		\$15 00
Colt, under one year old	Webster Emory	Grass Valley		\$2 50
CLASS II—GRADED HORSES.				
Colt, under one year old	Joseph Perrin	Grass Valley	Black Pea	\$2 50
Mare, two years old	Joseph Perrin	Grass Valley	Doncaster	\$7 50
Stallion, seven years old	John Dennen	Grass Valley	Uncas	\$10 00
Stallion, one year old	John Dennen	Grass Valley	Black Rab	\$5 00
Stallion, two years old	M. P. Peasley	Grass Valley	Hector	\$7 50
Stallion, eight years old	M. P. Peasley	Grass Valley	Alec Dick	\$10 00
Stallion, under one year old	M. P. Peasley	Grass Valley	Emma	\$2 50
Mare, five years old	M. Peffer	Ione City	Fortune	\$10 00
Mare colt, five months old	L. Horton	Rough and Ready		\$2 50
CLASS III—STALLIONS, GELDINGS, AND MARES OF ALL WORK.				
Mare, four years old	P. C. Joyce	Grass Valley	Maud	\$5 00
Stallion, two years old	Thomas N. Payne	Grass Valley	St. Patrick	\$3 00
CLASS IV—ROADSTERS—STALLIONS, GELDINGS, AND MARES.				
Gelding, two years old	C. D. Boyden	Lincoln	Dennis	\$3 00
Gelding, four years old	J. C. Brewster	Placerville	Nemi O	\$5 00
CLASS V—DRAFT HORSES.				
Mare, eleven years old	L. Horton	Rough and Ready	Mollie	\$5 00

Mare colt	L. Horton	Rough and Ready	Minerva	\$3 00
CLASS VI—CARRIAGE HORSES.				
Buggy horse	Samuel Fisher	Grass Valley		\$3 00
Span of carriage horses	Joseph Perrin	Grass Valley		\$5 00
SWEETSTAKES.				
Frank and family	Joseph Perrin	Grass Valley	Frank	Diploma.
Stallion and family	John Dennen	Grass Valley	Doncaster	Diploma.
Mare	M. P. Peasley	Grass Valley	Lizzie Mc	Diploma.
CLASS VII—JACKS.				
Jack	M. Wheeler	Grass Valley	H. W. Beecher	\$7 50
THOROUGHBRED CATTLE—BULLS.				
Jersey, four years old	L. Dickenson	Grass Valley		\$10 00
Ayrshire, nine years old	S. J. Alderman	Grass Valley		\$10 00
Jersey, six years old	H. B. Nichols	Grass Valley	General Grant	Diploma.
Calf, Ayrshire	Robert Berryman	Grass Valley		\$2 50
COWS.				
Durham, shorthorn	W. Emory	Grass Valley		\$10 00
Alderney, three years old	Joseph Perrin	Grass Valley		\$10 00
Ayrshire, four years old	Robert Berryman	Grass Valley		\$10 00
Ayrshire, four years old	Frank Kearney	Grass Valley		Diploma.
Jersey, six years old	George Lord	Grass Valley	Topsy	\$10 00
SWEETSTAKES.				
Best herd of calves	L. Dickenson	Grass Valley		Diploma.
GRADED CATTLE.				
Cow, four years old	H. B. Nichols	Grass Valley	Bessie	\$10 00
Cow, one year old	H. B. Nichols	Grass Valley	Rose	\$5 00
Calf, bull, ten months old	H. B. Nichols	Grass Valley	Zamlock	\$2 50
Bull, two years old	L. W. Pingree	Grass Valley	Ben	Diploma.
Cow, two years old	F. N. Wheeler	Grass Valley	Fannie	\$7 50
Cow, two years old	J. H. Campbell	Grass Valley	Fannie	Diploma.
ANGORA GOATS.				
First exhibit, seven thoroughbred	J. R. Nickerson	Auburn		\$7 50
Second exhibit, seven thoroughbred	J. R. Nickerson	Auburn		\$5 00

FIRST DEPARTMENT—Continued.

P. T. MUIR	Willits.
H. WILLIT.....	Willits.
E. C. BUELL	Willits.

REPORT.

LAKEPORT, March 17, 1885.

To the honorable the State Board of Agriculture:

GENTLEMEN: The Directors of the Twelfth District Agricultural Association submit this, their report of the transactions of said association, for the year ending this date.

JNO. R. COOK, Secretary.

RÉCEIPTS AND EXPENDITURES.

<i>Receipts.</i>	
Membership tickets.....	\$570 00
Privileges.....	455 50
Entrance to races.....	320 00
Gates.....	1,160 50
Hay and grain sold.....	88 10
Net proceeds from ball.....	107 00
Lumber sold.....	20 00
Donated by Secretary.....	72 35
Received from State.....	800 00
	<u>\$3,593 45</u>
<i>Expenditures.</i>	
Bills for lumber, nails, hardware, and other building material.....	\$624 72
Bills for labor, carpenters, bricklayers, and labor on track.....	730 41
Bills for clerks, doorkeepers, marshals, etc.....	167 50
Bill for power pump.....	145 60
Bill for music.....	175 00
Bills for printing, advertising, and stationery.....	259 35
Bills for hay, straw, and oats.....	221 67
Bills for purses.....	890 00
Bills for premiums for best lady rider and hurdle riders.....	64 00
Bill for salary of Secretary.....	50 00
Bills for premium list.....	550 00
Bills for postage stamps.....	3 00
Bills for expense of getting State warrant.....	3 50
	<u>\$3,884 75</u>
Balance.....	291 30
	<u>\$3,593 45</u>
<i>Assets.</i>	
Due society from S. E. Cooper, for pool privileges.....	\$57 58
Due society from other sources.....	125 00
	<u>\$182 58</u>

ADDRESS.

DELIVERED BY R. K. NICHOLS, ESQ., AT THE OPENING OF THE FAIR, SEPTEMBER 23, 1884.

When the fathers of man came from the distant East, from the center of the earth, from the sources of the three sacred rivers, the prehistoric Iran, they came bringing with them the history of the world before the flood. They issued forth to tame, to reclaim, to subjugate, by the arts of husbandry, an unknown, an unexplored, a virgin land. With them agriculture, yet in its puling infancy, was crude and insufficient. They acquired their first knowledge of the reproductive powers of the earth by simple observations of the workings of nature. There was something mysterious, supernatural, to their simple, untaught minds, in nature's fructifying power. Recognizing the action of unknown forces, they ascribed the sprouting, growth, and productive qualities of trees and plants directly to their gods. They believed that the gods, in person, partook of the labors and pleasures of the field, hallowed them by their presence, directed them by their instructions. Agriculture, in all its branches, was under the immediate supervision and protection of their deities. Yearly, with solemn rites, did the ancient husbandman present his first, best fruits, a votive offering, on the altar of his god. A pious custom, perpetuated to historic ages. For do we not read in the "Book of the Law," that the chosen people were commanded, yearly, to bring a sheaf of the first fruits of their harvest to wave before the Lord?

In these later times, as civilized man has advanced in the "march of progress," we have lost our veneration for many of the ancient customs, and proven the falsity of others. Yet, even to us, with all our pride of increased knowledge, after all our researches in chemistry and botany, to us, in many ways, nature is yet a sealed book. We can only acquire a knowledge of her economy by observation, comparing one with the other, and thence drawing deductions for the general good. For this purpose we have Agricultural Fairs. For this reason, mutual improvement, derived from observation and comparison of our first, best fruits, have the members of the Twelfth Agricultural District of California assembled together on this occasion, at this convenient, well appointed, and beautiful place. Beautiful, indeed, it is, both to the eye and sense, as, with one sweep of the vision, we behold the towering summits, where thunders sleep and lightnings play, before us the open lake, and in the distance the broad, alluvial plains, golden with the harvest, rich with happy homes and an industrious population. Here we bring our samples of first, best fruits, and offer them upon the altar of judicious observation, that, by honest comparison, all may be benefited by the experience, labors, and success of each. We have here presented the results of our mechanical industries—the fruits of forest, field, and farm; all are represented—our orchards, vineyards, grain fields, hop yards, stock, sheep, and horses.

The horse—that tried, trusty, faithful servant of man, that “mocketh at fear, and is not affrighted”—what more beautiful object is there, in the animal kingdom, than the pure thoroughbred? Who can but admire him? Notice those delicate limbs, almost too dainty for the ground they touch but to spurn; slender, yet as strong and supple as steel; a well rounded body, every muscle swelling, instinct with glorious exuberant life; a mighty chest, curtained by a mane, soft and wavy as a maiden’s locks; a proudly arching neck, small head, and luminous eyes. Those large bright eyes, soft and inquisitive as a deer’s, how plainly, as with pointed ears, distended nostril, quivering lip, he reaches out and hesitatingly touches you, do they ask: who are you, friend or foe? But with all their beauty, love them as we may, the pretty, swift thoroughbreds are not suited to all work. We farmers must have horses adapted and framed by nature for the service to which we wish to devote them. For speed, the oblique shoulders and high withers; for draft, the wide chest and frame, roomy in all directions, weight and strength being more desirable than speed. In purchasing or breeding horses, first decide for what kind of work we will use the animal, then act accordingly. The old Arabian rule is as true to-day as it was thousands of years ago—“the foal follows the sire.” Every farmer should raise and break his own teams. Raised on the ranch, they are at home, more tractable, and, consequently, easily handled. A colt or two on the farm are of but little trouble, and the expense of keeping is merely nominal. It helps out the store bills wonderfully if we have a two-hundred dollar horse to sell every year or so. From present appearances there is no danger of the market becoming overstocked with sound, strong, draft animals.

When we reflect that in 1880 there were more than 4,000,000 sheep in this State, and that Mendocino County alone has over 300,000 sheep, and annually exports over 1,000,000 pounds of wool, it really seems as if some remarks were pertinent on the wool question. We raise sheep either for their wool or mutton, and hope to make a living and money out of the business. We are now suffering from a depression in our wool trade. We have continued, year after year, breeding up our sheep, until we have an exceptionally fine lot of wool sheep in this district, but, as far as my information goes, very light mutton sheep as a rule. Consequently, at a time like this, wool being depressed, our muttons being so light and ranking so low in the market, the sheep business does not pay, and the wool-growers suffer hard times. Have we not made a mistake in breeding altogether for wool? Leaving out of the case the consideration that the pure merino is too delicate an animal for our brush pastures and rough methods, that fine sheep cannot thrive with poor keeping, that they must be housed, fed, and protected during the Winter storms, would we not be more successful, have a surer income, if we raised a breed of sheep possessing both characteristics, mutton as well as wool? It is possible, by crossing large fine merinos with some of the best woolled mutton varieties, to obtain a cross by which good salable wool may be produced, and at the same time heavy muttons be grown. It certainly appears to be a wise policy to sacrifice the weight of our wool clips a little in the size and weight of our flocks. Good, fat heavy sheep are never a drug in the market—people must eat. Will it not pay us to give some attention to the bodies of our sheep, as well as to the woolly covering of their backs? A fine fat one hundred-pound wether will always bring a remunerative price.

To my surprise I find, on examination, that over one half of the cultivated land in Mendocino and Lake Counties is used for the production of grain; and, alas, that although the acreage sown is continually increasing the production does not keep pace with the acreage. Is it possible that this comparatively new county, fifty years ago almost unknown and unexplored, except by Lewis and Clarke and an occasional trapper, is wearing out? If so, what a sad commentary on our styles and methods of farming. The truth is, that the land, instead of being worked to death, is not half worked. Fields, that a few years ago thrashed fifty and sixty bushels of wheat to the acre, now yield us but twenty and even fifteen bushels. Hence, we say, "farming is a poor business," and "the land is worked out." The true difficulty is with the farmers—the land is all right. The nitrogen, phosphoric acid, potash, and other chemical ingredients necessary for vegetable life, are all in the soil, but the shallow manner in which we cultivate the land renders the plant food unavailable—it is dead capital. Labor is so high we cannot afford small crops. We must raise large crops in order that we may live. To do this, we must harvest our lands less frequently. I most earnestly advocate Summer fallowing, and deep thorough stirring of the soil. Stirring the soil is the basis of successful agriculture.

I mean Summer fallowing—not the Spring scratching system now in vogue, but a good deep plowing—just after the Winter rains, and two plowings at different times in the course of the next three or four months. The land will thus be more frequently exposed to the beneficial action of the atmosphere, and we will obtain greater returns from the same land on alternate years than we now receive by cropping it each year in succession.

We *must* do one of two things—wait on the land or else apply manure. But is grain farming the most profitable? High wages, high taxes, high priced land, necessitates high farming. By high farming I wish to be understood as recommending that judicious husbandry that causes to be produced the largest and most profitable crops with the smallest outlay.

I have but little patience with the slovenly economy that stores plows, thrashers, reapers, and all the farm machinery under a tree or in an open corral, for hen roosts and pig pens. No thrifty farmer will allow his tools to be exposed to the weather from one season to the other. As soon as the year's work is done he will clean up his header or reaper, have it repaired whilst he remembers which bolt is broken, or what box heats, put it away in a safe, dry place, and thus have it ready for the next season's work. It pays. Try it, some of you who cleave to the out-door system of storage, and see if your blacksmith's bill next year is not lighter than common.

But is wheat the most profitable crop we can raise? At the best we cannot expect to net over \$20 per acre. Are there not more profitable uses to which we can devote our lands?

HOPS.

Many farmers in the district have engaged in the cultivation of hops. On favorable years they expect to clear from \$200 to \$700 an acre from their hop lands. There are thousands of acres of the best of hop land in Lake and Mendocino Counties as yet put to other farm uses, which I hope ere many months to see planted in hop vines.

They can be grown successfully on any land that will raise a good crop of corn. Select positions sheltered from heavy winds, and prepare your land thoroughly, for a hop yard should be permanent, and will be if you manure the yard every Spring, and, by repeated plowings, mix the dressing well with the soil. Remember, the hop plant must have lime. An admonition that should not fall unheeded, as it will not hurt some of you to sow a few bushels next year, judging from the result of my inspections.

SPECIAL CROPS.

From the westernmost point of Mendocino, beat upon by the surges of the ocean, to the eastern limit of Lake County, where the rushing, eddying waters of Cache Creek burst through the mighty cliffs of naked sandstone in their passage to the parched plains of Yolo—all over this immense district are fertile, well watered valleys, peculiarly adapted to the raising of special crops. Vegetables of all kinds, alfalfa, the sugar beet, and the much more easily grown and more profitable sorghum or Chinese sugar cane, a plant well suited to our climate and soil, rich in sugar, its cultivation no longer to be considered in the light of an experiment, as the researches and efforts of the Agricultural Department at Washington, as well as those of Doctor Collier, have fully demonstrated its practicability. In answer to the inevitable question, "will it pay?" I reply—the cultivation of any plant by which we can produce our own sugar, *must pay*. We consume annually fifty-seven pounds of sugar to each person in the United States, and of this vast amount only twelve per cent is grown on our own territory. Nearly sixty million of inhabitants, fifty-seven pounds of sugar to the person, and then compute for yourselves the huge proportions of our sugar trade, and decide if it will not pay to cultivate a plant that has been proven can be grown profitably on our soil and accomplish the desired results—satisfy the immense and continually increasing sugar demand.

The great tule fields along the borders of Clear Lake could be dyked, reclaimed, and devoted to the growth of rice, sorghum, and even the cranberry, with great gain to the grower and advantage of the whole community.

VINES.

Tourists traveling through our district, viewing the miles upon miles of rolling hills covered with manzanita and chemise, must wonder what use can be made of them to benefit the condition of man. On examining their structure, we ascertain that these same despised hills are composed of light soils, formed from ignean rocks deeply impregnated with iron, and are peculiarly suited to fruit trees and viticulture.

Actual thermometrical measurements, continued for a series of years, have shown that these hills, especially in Southern Lake, are in the so called thermal belt, being even from three to five degrees warmer than St. Helena, the great grape growing center of the State. Having the soil and climate, there is nothing to prevent these immense tracts of waste (?) hills being utilized for grape culture and fruit growing. Already has a commencement been made. At Middletown, Upper Lake, and Lower Lake there are hundreds of acres of thrifty, vigorous young vineyards growing upon hills that four years

ago were covered with chemise and the dens of the coyote and rattlesnake. There are vineyards that, for luxuriance of growth and abundance of yield can challenge the world, as they are rarely equaled and never excelled. Careful analysis of our products have been made, and our grapes found to possess the necessary properties and proportions. Nothing now remains but the application of intelligent labor to enable us to take the front rank among the grape growing countries of the world.

Here on every hand are thousands of acres especially prepared by nature for the growth of fruit trees and the finer varieties of the wine grape, awaiting the homesteader and preëmtor. Young men, this is your opportunity. A preëmption claim costs you but \$200. Clear it up, plant it in suitable vines, care for them well, and in four years you have a property worth \$300 an acre.

FRUIT TREES.

On some of your land plant the apple, pear, peach, prune; and be sure and not neglect the hitherto forgotten olive, a tree undoubtedly fitted for our soil and climate, as it flourishes best in warm, light, dry earth, and in a temperature averaging, as ours, 55 degrees F. The olive is a paying tree to grow, bearing at four years of age and coming to maturity at ten. A mature tree will yield five gallons of oil, pressed from the berries, that is worth from \$5 to \$10 a gallon. Planting these trees twenty feet apart, we have one hundred and eight to the acre, yielding us, annually, \$540 an acre with but little cost or care.

We hardly remember the name of the eminent commander whose generalship and splendid success reduced the haughty Mithridates, a subject of the iron crown of Rome, but sixty generations of men gratefully remember the same general as that Lucullus, who introduced and assimilated the cherry to the climate of Europe. Whoever introduces a new fruit, or proves the adaptability of a new district to a hitherto untried variety, contributes to the salutary pleasure and profit, and will ever be gratefully remembered by unborn thousands of men.

FORESTRY.

Speaking of fruit trees brings to my mind another subject that demands the immediate attention of every citizen of the State as well as of this district. Statistics show that in these two counties—Mendocino and Lake—there are twenty-eight sawmills engaged in converting our forests into merchantable lumber.

Mendocino last year made over 53,000,000 feet of lumber and 15,000,000 shingles. Add to this the large number of trees yearly worked into railroad ties, shakes, and fencing, with the thousands of cords yearly cut for firewood, and we become astounded at the immense inroads that are being incessantly made upon our timber supply. Estimate, in addition to this necessary exhaustion, the losses arising from forest fires and willful and reckless wastefulness, then certainly the prospect for an approaching early scarcity of timber becomes alarming. Ten years from date, at the present rate of consumption, there will not be a saw log in Lake County. Not only must the greatest economy be used in order to preserve our timber supply, but there are graver, weightier climatic reasons. It is a fact, well attested, that a certain proportion of forest is requisite in all countries to pre-

serve existing climatic conditions. Cut off the timber and you increase the mean temperature of a district—cause a cold country to become more rigorous, and a warm one hotter and arid. Plant trees and the converse of the above results proves equally true. Asia Minor, now so dry and sterile, a few centuries ago, with the mountains and hillsides covered with the stately cedar and umbrageous oak, teemed with the most populous nations of antiquity.

Beautiful Granada, famed in story and song, her fertile plains verdant with the olive, date, and palm, her timber preserved by the stringent forestry laws of the Moors, is, to-day, denuded of her sylvan protection, dry and sterile. Ohio, New York, and Pennsylvania all bear evidence, by the increased rigor of their Winters, what consequences must follow the careless, thoughtless denuding of our arboriferous districts. In Europe forestry has become a science, silviculture is enforced and protected by the Government. In the United States the most beneficial results are already attendant upon the systematic tree planting in Kansas, Iowa, and a few other States.

On the Pacific Coast we are personally interested in this subject. Our forests are fast melting away, and no provision is being made for their renewal. We need our woods to save us from the parching droughts of Summer, or protect us from the devastation of sudden torrents in Winter. Trees are Nature's thermometers. The strong arm of the Government must be interposed to protect them. Thirty per cent of our acreage should be occupied by forests in order that we might have the proper climatic equipoise. I hope that our State Government will awaken to the necessity, and that our next Legislature will enact and provide for the enforcement of forestry laws, such as will protect and increase our timber preserves.

TRANSPORTATION.

Mountain-locked as we are, the question of transportation is an interesting and costly one to us. We need a railroad. In this country of magnificent distances, railroads, or some other equally speedy method of transportation are necessary to arouse into activity and sustain its internal industries. Financially unable ourselves to construct the road, we must then offer railroad builders suitable inducements. Not the bait of a subsidy, ground out of a heavily taxed community, but the better, more satisfactory, lasting inducements, of a paying business all along the route.

Men do not spend millions on railroads for amusement, but as an investment. If we but improve the opportunities kind Nature affords us, cultivate these hills and valleys, make the waste places "bloom and blossom as the rose," make business for a railroad with our grain, stock, fruit, wool, and wine, we will soon have the iron horse thundering through the gorges of Cache Creek, skimming along the shores of Clear Lake, and causing the mossy avenues of Mendocino's redwoods to reverberate with his whistle. The settlement of this question of transportation is very much in our own hands. We hold the key, and with our wives and boys can solve the problem.

LABOR.

True it is difficult to keep the boys on the farm. They look upon farm life as drudgery, and if we drag them around the ranch fifteen

and sixteen hours a day, who can blame them for escaping such slavish toil? Ten hours of good, sharp, vigorous work is all any man or boy should do in a day. Get up early, eat well, work well, quit well (at a Christian hour). Have your evenings at home, read and study the papers and good books, and teach your boys to do likewise. By the study of good books, and an habitual intercourse with noble and pure thoughts and ideas, they will become ennobled, become thinking men, better citizens, and better farmers. Prove to them that agriculture is an art, and must be followed as such. Show them the dignity of the calling; that the farmers of the United States hold in their hands one fourth of the wealth; that the nation depends on them for a living, every farmer in this broad land supporting thirteen individuals. Thus interest them in the work, pay them for what they do, and you will have no trouble in keeping the boys on the old place.

FARMERS' WIVES.

Above all, be cheerful about the house. Meet the wife with a smile. Her work is as hard as ours. She is invaluable, and does earnest work, with all her heart. She loves home cares. She identifies herself with her woman's life, duties, and hopes, and is always ready to give help and sympathy in times of trial. Surely it is our duty to lighten her labors, not to allow her to exhaust her strength or suffer nervous prostration. Have a care for the wife, for the low, dull pain of laborious work, never done too often, has stricken the already overburdened frame of the farmer's wife.

PERORATION.

In the beginning, when the progenitors of the race wrestled with the wilds of a virgin world, agriculture was the first and most important step in the path of their progress. In the last quarter of a century we, likewise, have carved out a new empire on the golden soil of California, and agriculture must be the basis of its future prosperity. For in the coming years, in the early morn, when the sun sheds redundant light over plain and peak, and the azure waters of our inland sea, scarce lisp up the sands, then the inquiring mind of posterity, viewing our work from the translucified peak of old Konockti, will judge us by the evidences of our husbandry, as the agriculture of a country affords the surest data for estimating the civilization, the character, aims, and practical virtues of its inhabitants.

PREMIUMS AWARDED—1884.

FIRST DEPARTMENT.

Live Stock.	Name of Owner.	P. O. Address.	Name of Animal.	Award.
